

- Cu(InGa)Se<sub>2</sub> solar cells (*continued*)
- lack of comprehensive scientific base 570
  - light-generated current 593
  - manufacturing issues 602–9
  - material properties 570–8
  - module fabrication 604
  - module performance 604–7
  - optical properties 574
  - outdoor testing results 606
  - processes 602–4
  - production costs 607
  - quantum efficiency 593
  - recombination 595–8
  - scanning electron microscopy image 577
  - schematic cross section 569
  - structure 571–3
  - substrates 578–9
  - surface 576–7
  - TEM cross section 569
  - thin films 570
  - transparent contacts 590–1
  - two-step processes 583–4
  - wide and graded band gap devices 600–2
- Cu(InGa)Se<sub>2</sub>/CdS 28
- current–voltage (*J*–*V*) behavior 595–6
- Cu(InGa)Se<sub>2</sub>/CdS interface 599–600
- Cu(InGa)Se<sub>2</sub>/CdS solar cells
- quantum efficiency curves 596
  - temperature dependence 597
- CuInSe<sub>2</sub> 570
- absorption coefficient 574
  - complex refractive index 575
  - electronic levels of intrinsic defects 576
  - intrinsic defects 576
  - selected properties 572
- CuInSe<sub>2</sub> solar cells 567, 569
- current density 82, 805
- versus voltage 506
- current flow, electrode kinetics at 803–7
- current matching 548
- current–voltage (*I*–*V*) characteristics 92–5, 103–4, 122, 335, 701
- current–voltage (*I*–*V*) measurements 721–38
