**Provisional Draft
Maintenance Review Board
Report**

for the
March 1997 revision

For discussion only

December 1996

PREFACE

This Maintenance Program Proposal is not fully representative of the March 97 MRB Report.

It is issued several weeks in advance of the ISC meeting in order that ISC/MRB members may have a document in the new format to use during the meeting.

This 'December 1996' MPP comprises the following:

- Structures Program updated to include results of MWG5 meetings. i.e. CPCP and simplified sampling program are introduced
- Zonal Inspection Program totally rewritten in format used in other Airbus Industrie MRB Reports. It is updated to reflect changes arising from the revised Structures Program and SSI/MSI references are now provided for accountability.
- Sections and Appendices have been re-ordered / re-numbered to harmonise as far as possible with more recent MRB Reports
- The technical content of the remaining sections has not been modified yet. These sections have simply been retyped in the new format.

It is evident that significant changes will be required to the introductory sections and some appendices. These changes, plus those proposed to the Systems and Powerplant Program, will be presented at the ISC meeting in Jan 97.
