

## Reference about "Spy Satellite"

Revised 10/31/2005 to selected articles.

It is known as **Future Imagery Architecture** project. The newspaper articles about this project is traced back to April 12, 2000 by a quick search of Los Angeles Times, New York Times, and Chicago Tribune. It seems for me that the usage of the project is partly derailed from the original purpose.

Key words: Spy Satellite; Powerful Telescope; Images of Ground-Based Objects; Electrooptic Satellite; Computer-assisted Image Analyses; National Reconnaissance Office.

### LOS ANGELES TIMES (3)

### **How To Read Full Articles From Newspaper Archies.**

**www.latimes.com**

**www.nytimes.com**

-> Left navigation pane -> **Archives** -> May go Advanced (right-side of [Search]) to set the exact date and key words -> Purchase full articles (from 8 cents to a few dollars per article).

**My experience:** It appears for me that National Reconnaissance Office does both brain-reading (under my [science]) as well as brain-broadcasting. It's all about the techniques of photons (electromagnetic waves).
