

Artificial Intelligence (A.I.)

Good morning Lecturer and friends,

It's my pleasure to be here to start my one-minute presentation. Today's topic is about Artificial Intelligence (A.I.)

Have you ever thought and talk about the advantages of A.I. to our life or use to solving problems and make a profit in your business? All those things are A.I. can do, but what is A.I.? The definition of A.I. can be divided into two main dimensions. The first is consumed with thought processes and reasoning, while the others address behavior. That is Acting Humanly and Thinking Humanly and Rationally. For example robots, chat bots, mechanical dinosaur, and virtual child.

Our world will coming to the A.I. world, lets enjoy it!

That's all. Thank you for your attention.
