

!!! IMPORTANT NOTICE !!!

This Ultra320 hard disk drive has been assembled with a new carrier that has been designed to help optimize the higher transfer rates of the Ultra320 eServer xSeries™ systems.

If you are installing this U320 Hard Disk Drive Option in a xSeries x345 or x235, you must first update the system BIOS before installing the drive option. If there is a ServeRaid 5i controller installed, you must also update the controller firmware and BIOS associated device drivers before installing the drive option.

Please look for the xSeries system and controller updates at <http://www.pc.ibm.com/qtechinfo/MIGR-4JTS2T.html>.

This new carrier is not backward compatible on the Ultra160 or earlier systems. Attempting to install this drive/carrier combination in one of these systems could cause damage to the system and/or hard disk drive and may void the warranty.

For your convenience, a list of the systems that are no longer compatible with the new carrier is included on the reverse side of this page.
