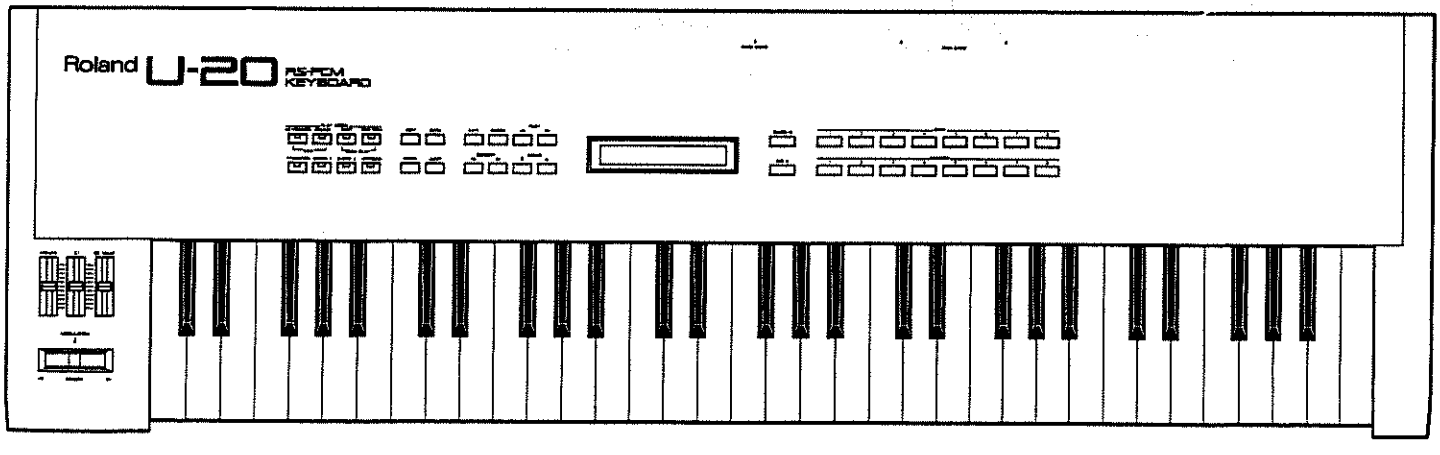
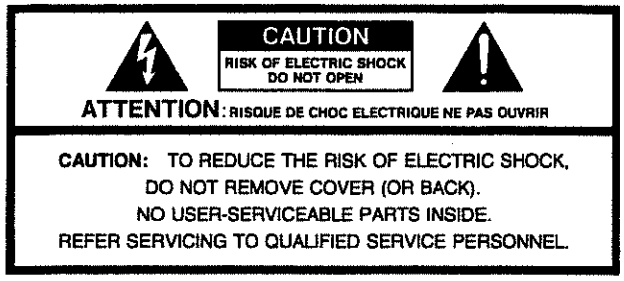
U-20

OWNER'S MANUAL





The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

INSTRUCTIONS PERTAINING TO A RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS.

IMPORTANT SAFETY INSTRUCTIONS

WARNING — When using electric products, basic precautions should always be followed, including the following:

1. Read all the instructions before using the product.
2. Do not use this product near water — for example, near a bathtub, washbowl, kitchen sink, in a wet basement, or near a swimming pool, or the like.
3. This product should be used only with a cart or stand that is recommended by the manufacturer.
4. This product, either alone or in combination with an amplifier and headphones or speakers, may be capable of producing sound levels that could cause permanent hearing loss. Do not operate for a long period of time at a high volume level or at a level that is uncomfortable. If you experience any hearing loss or ringing in the ears, you should consult an audiologist.
5. The product should be located so that its location or position does not interfere with its proper ventilation.
6. The product should be located away from heat sources such as radiators, heat registers, or other products that produce heat.
7. Avoid using the product where it may be affected by dust.
8. The product should be connected to a power supply only of the type described in the operating instructions or as marked on the product.
9. The power-supply cord of the product should be unplugged from the outlet when left unused for a long period of time.
10. Do not tread on the power-supply cord.
11. Do not pull the cord but hold the plug when unplugging.
12. When setting up with any other instruments, the procedure should be followed in accordance with instruction manual.
13. Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.
14. The product should be serviced by qualified service personnel when:
    A. The power-supply cord or the plug has been damaged; or
    B. Objects have fallen, or liquid has been spilled into the product; or
    C. The product has been exposed to rain; or
    D. The product does not appear to operate normally or exhibits a marked change in performance; or
    E. The product has been dropped, or the enclosure damaged.
15. Do not attempt to service the product beyond that described in the user-maintenance instructions. All other servicing should be referred to qualified service personnel.

SAVE THESE INSTRUCTIONS

For the U.K.

WARNING: THIS APPARATUS MUST BE EARTHED

IMPORTANT: THE WIRES IN THIS MAINS LEAD ARE COLOURED IN ACCORDANCE WITH THE FOLLOWING CODE.
GREEN-AND-YELLOW: EARTH, BLUE: NEUTRAL, BROWN: LIVE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:

The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked by the letter E or by the safety earth symbol ⏚ or coloured GREEN or GREEN-AND-YELLOW.

The wire which is coloured BLUE must be connected to the terminal which is marked with the letter N or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

The product which is equipped with a THREE WIRE GROUNDING TYPE AC PLUG must be grounded.

26025700 '94-8-A2-210D

Thank you for purchasing the U-20 RS-PCM keyboard. The U-20 contains high-quality digital sounds, and can be used as a multi-timbral sound generator. It also functions as a MIDI keyboard controller, for a wide range of applications both on stage and in the studio. To take full advantage of the U-20's potential and ensure long and trouble-free use, please read this owner's manual carefully.

How to use this Manual

This owners manual consists of the following five sections.

Section 0 "Playing : step1":
This tells how to hear the ROM play (the demo performance), and explains the basic organization of the U-20. Next, you will learn how to select and play the various sounds.

Section I "Playing : step2" :
This explains the performance functions of the U-20, and how they can be used to enhance your playing.

Section II "Editing":
This section explains basic procedures for creating sounds and making settings. Read this section when you want to create your own sounds.

Section III "System Setups":
This section explains basic concepts of MIDI that are important when using the U-20, and how to take advantage of the U-20's MIDI functions. If you will be connecting the U-20 with other MIDI devices, be sure to read this section.

Section IV "Summary":
This section summarizes the operations of each mode, explains the overall organization of editing operations, and how to store and manage data.

*You do not need to know about MIDI in order to use the functions explained up to section II.

CONTENTS

FEATURES

The U-20 has features such as ;

●High-quality RS-PCM Sound Generation

The U-20 contains 128 types of high-quality sound, ranging from piano to instruments appropriate for a classical or jazz ensemble, and synth sounds for rock or fusion. Parameters (elements of sound) for pitch and level can be used for detailed control over the nuances of each tone (sound).

In addition to the built-in tones, tones from PCM cards (sound library SN-U110 series) sold for the U-110 can also be used.

●Multi-timbral

The U-20 contains a multi-timbral sound generator that can handle 6 parts and an additional rhythm part. The sounds (timbres) and effects of each part can be stored in 64 different settings as sound patches. When using a MIDI sequencer, a single U-20 can fill the role of an entire ensemble.

For the rhythm part, tone assignments and settings can be stored as one of four rhythm sets.

●Flexible Control Functions

Settings determining how controllers affect performance can be stored as one of 64 keyboard patches, allowing you to modify sounds as you play, or control different types of external tone generator.

●Built-in Digital Effect

A digital reverb/chorus effect is built in, providing a spacious feeling of stereo depth. Each sound patch has its own effect settings.

●Chord Play Function

A chord can be assigned to each key, allowing you to play chords with a single finger. Since a different chord can be assigned to each key C, C# — B, you can perform using diatonic chords or harmonies in thirds. Eight sets of chords can be stored in the U-20 (one set includes C, C# — B). While playing, you can instantly switch between any two previously specified sets of chords.

●Arpeggio Play Function

A chord you hold down can be automatically arpeggiated. An arpeggiation pattern can be set for each keyboard patch, allowing you to use the musically appropriate pattern for each situation. Arpeggio can be switched on/off using a button, and can be used in conjunction with the chord play function.

●Jump Function

The jump function allows you to instantly jump to a specified screen. In addition to the pre-defined screens, you may also define your own. Using the jump function can make the editing process more efficient.

●RAM Card for Convenient Data Storage

A separately sold RAM card (M-256E) can store the entire settings of the U-20. Patches stored in a RAM card can instantly be recalled for use.

IMPORTANT NOTES

In addition to the safety instructions on page 2, please note the following points.

Concering the Power Supply

●Whenever you make any connections with other devices, always turn off the power to all equipment first. This will help in preventing malfunction, and damage to speakers.

●Do not connect the unit to the same power outlet as one used for distortion producing devices (such as motors, variable lighting devices). Be sure to use a separate power outlet.

Concering Placement

●Should the unit be operated nearby television or radio receivers, TV pictures may show signs of interference, and static might be heard on radios. In such cases, move the unit out of proximity with such devices.

Maintenance

●For everyday cleaning, wipe the unit with a soft dry cloth, or one that is dampened slightly. To remove dirt that is more stubborn, wipe using a mild, neutral detergent. Afterwards, make sure to wipe thoroughly with a soft cloth.

●Never apply benzene, thinners, alcohol or any like agents, to avoid the risk of discoloration and deformation.

Other Precautions

●Protect the unit from strong impact.

●Avoid getting any foreign objects (coins, wire, etc.), or liquids (water, drinks, etc.) into the unit.

●A certain small amount of heat will be radiated from the unit, and this should not be considered a malfunction.

●Before using the unit in a foreign country, check first with your local Roland Service Station.

Concerning Memory Backup

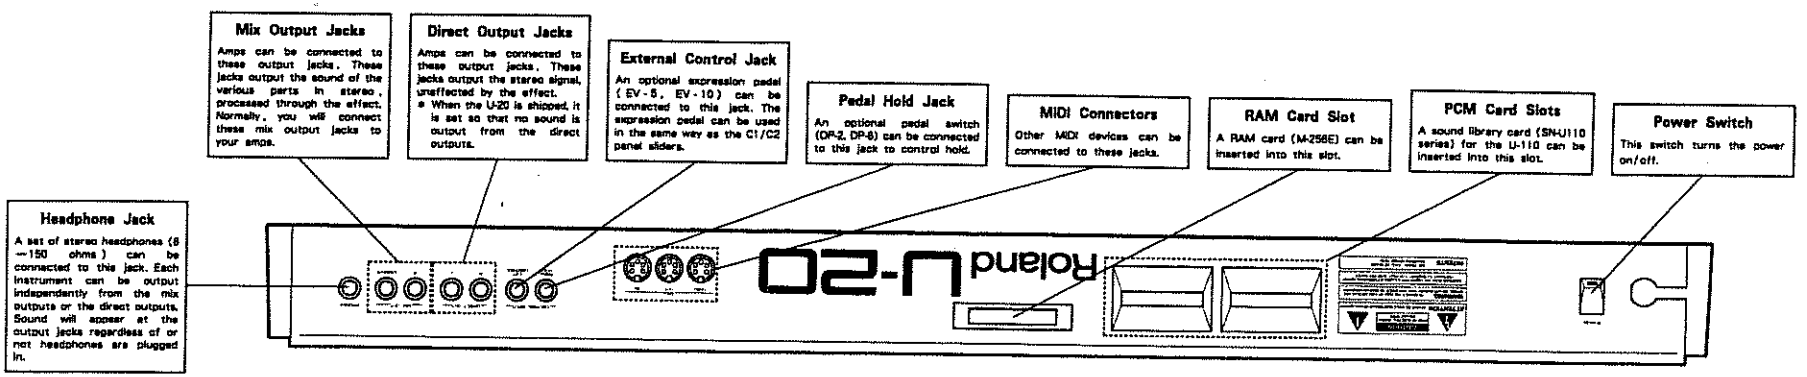
● The unit contains a battery which maintains the contents of memory while the main power is off. The normal life of this battery is 5 years or more, but it is strongly recommended that you change it every 5 years as a rule. When it is time to change the battery, contact a Roland Service Station.

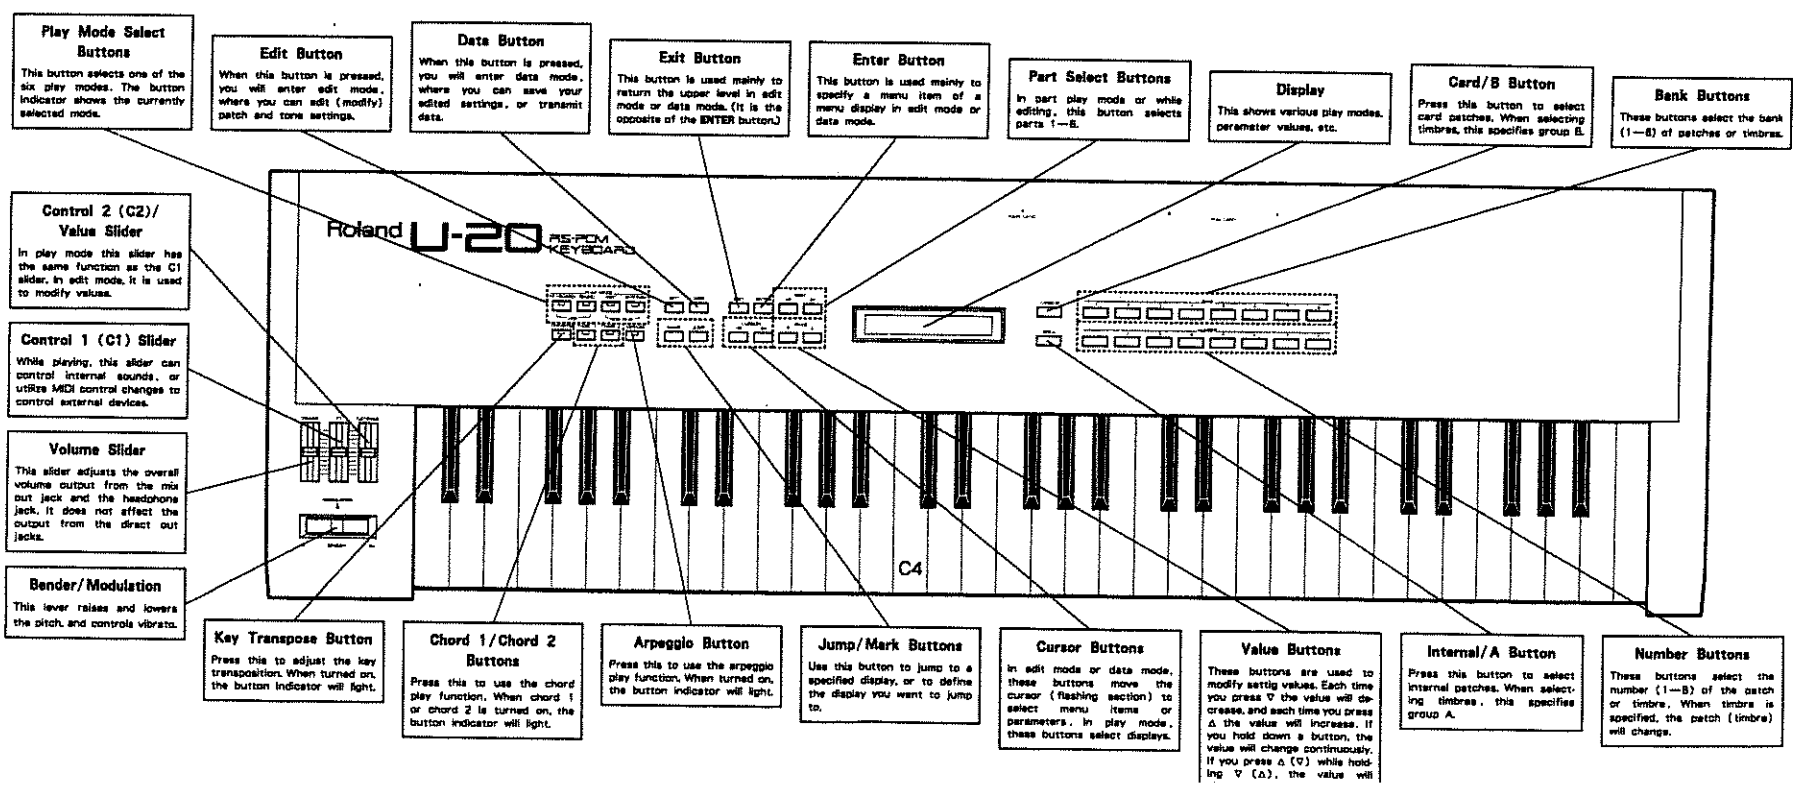
* The first time you need to change the battery could occur before 5 years have passed.

●When the battery gets weak the following will appear in the display. By this time, it is possible that the contents of memory have already been lost.
"Internal Battery Low ! "

●Please be aware that the contents of memory may at times be lost ; when sent for repairs or when by some chance a malfunction has occurred. Important data should be saved on RAM Card, or written down on paper. During repairs, due care is taken to avoid the loss of data, however, in certain cases, such as when circuitry related to memory itself is out of order, we regret that is may be impossible to restore the data.

FRONT AND REAR PANEL





SECTION 0

Playing : step 1

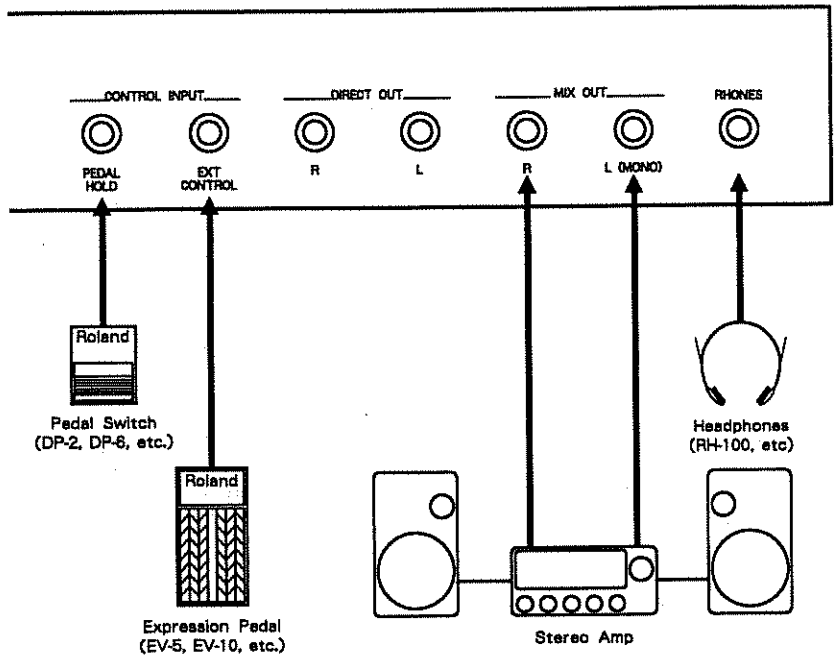
– Listen to the sounds ! –

The U-20 contains two demo songs which take advantage of its multi-timbral capability (the ROM Play function). In section 0, after telling you how to make connections, we will explain about ROM play. Next we will explain the basic organization of the U-20, and its play modes. This section will be very important in helping you to understand the U-20's functions, so please be sure to read it carefully. Finally, play the keyboard to make sure that sound is being produced.

1 BEFORE YOU PLAY

1. Connections

Connect the rear panel MIX OUT jacks to the input jacks of a keyboard amp or mixer. When playing in stereo, use the L and R jacks. When playing in mono, use only the L (MONO) jack. Before making connections, make sure that the power switches of the U-20 and the amp are off. When using headphones, insert the headphone plug into the PHONES jack.



* The U-20 does not contain a built-in power amp or speaker, and will not make sound by itself.
* When shipped, the U-20 is set so that no sound appears at the DIRECT OUT jacks.
* When connecting the U-20 directly to a stereo system, be careful of the output level. Excessively high levels can damage the speakers etc. of the stereo system.
* To take full advantage of the U-20, we suggest that you play it in stereo.

2. Turn the power on

①Check that connections for power and external equipment (amplifiers, etc.) are correct.

②Turn the power switch of the U-20 on.
In a short time the following message will appear.

```
RS-PCM  Keyboard
Roland  U-20
```

Then the play mode indicator will light, and the patch name will be displayed.

```
I-11 #001 : Standard
I-11 #001 : Acoust Piano
```

③Turn the power of the external equipment (amplifiers, etc.) on.

Now you are ready to play.

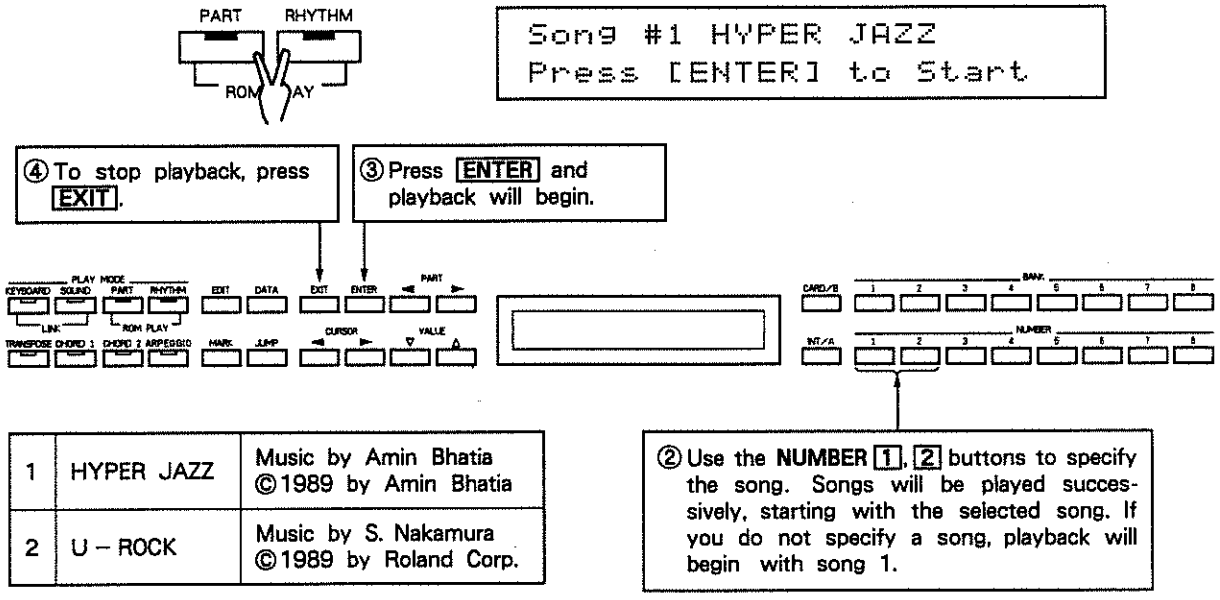
* After the power is turned on, the U-20's protection circuit inserts a short delay before operation begins.

2 LISTEN TO THE ROM SONGS

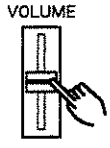
The U-20 contains 2 demo songs that demonstrate its multi-timbral capabilities. ROM play mode automatically plays these songs.

* When using the ROM play function, we suggest that you connect a stereo amp system or listen through headphones in order to get the full benefit of the U-20's multi-timbral capabilities.

① Simultaneously press the [PART] and [RHYTHM] buttons to enter ROM play mode.



1	HYPER JAZZ	Music by Amin Bhatia ©1989 by Amin Bhatia
2	U – ROCK	Music by S. Nakamura ©1989 by Roland Corp.



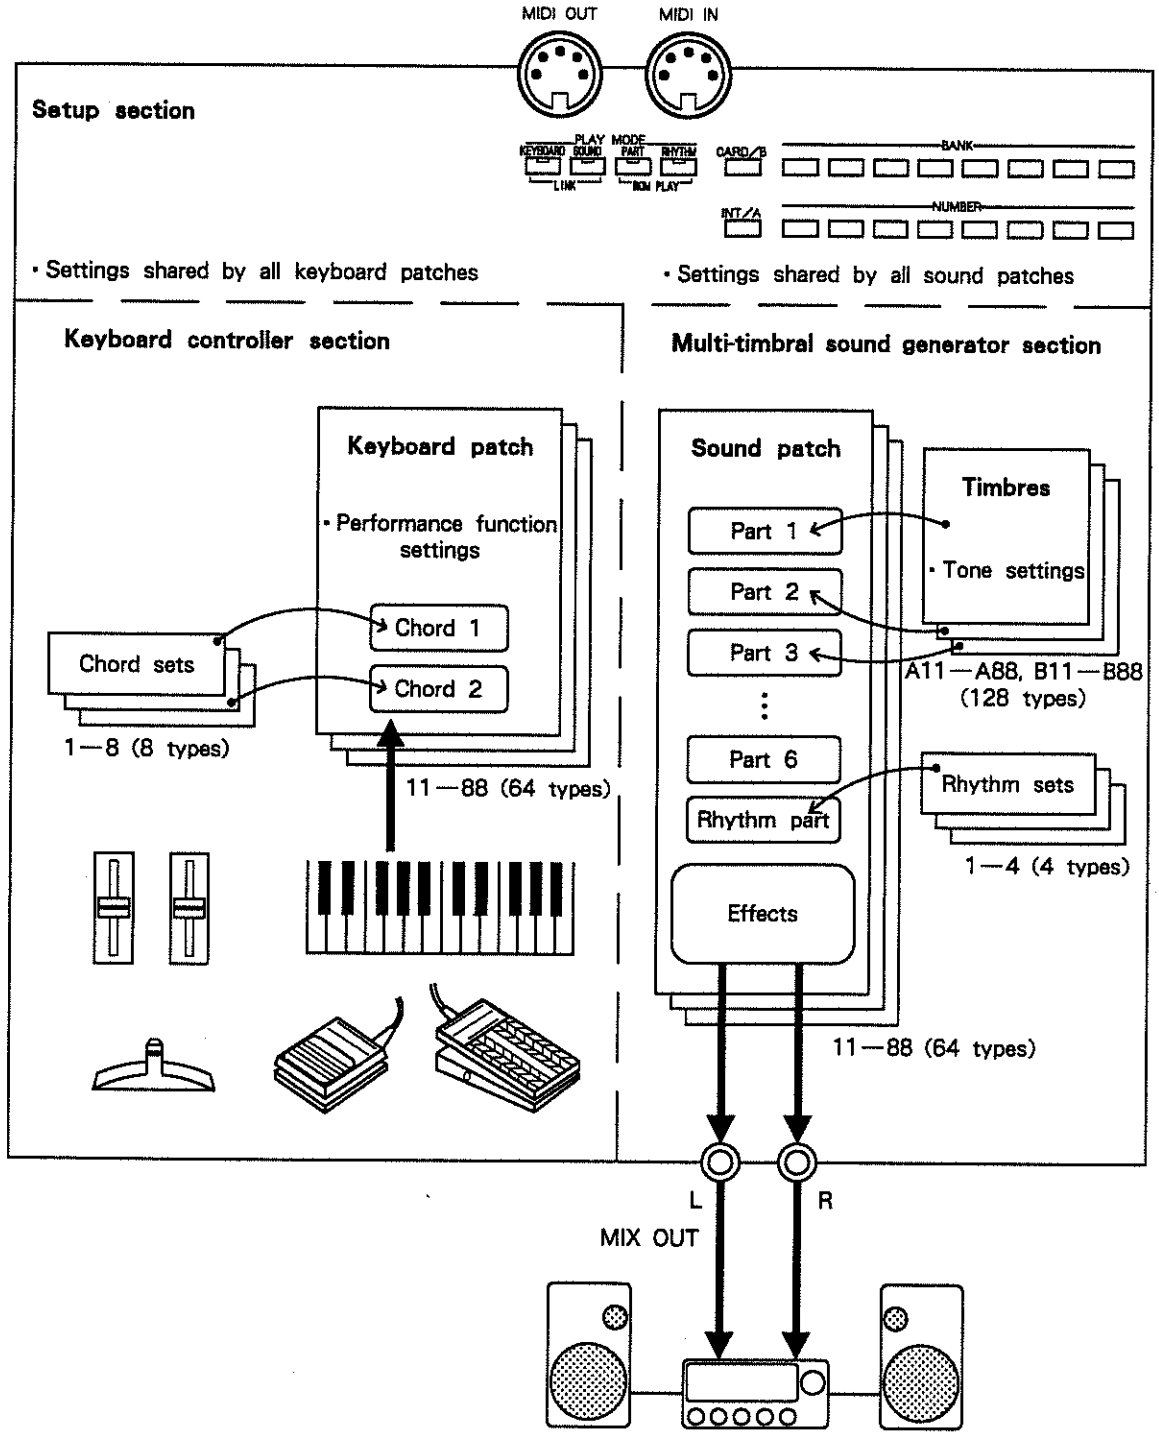
Use the **VOLUME** slider to adjust the volume.

* It is often convenient to check connections and volume while using ROM play.
* To use the U-20 to play songs as in ROM play, you will need a separate MIDI sequencer.
* The keyboard and bender will not function during ROM play.
* The notes and other musical data being ROM played will not be transmitted from MIDI OUT.

3 INTRODUCING THE U-20

■ How the U-20 is organized

The U-20 consists of a keyboard controller section and a multi-timbral sound generator section.



●Multi-timbral Sound Generator Section

The multi-timbral sound generator can store 64 Sound Patches. Each Sound Patch consists of Parts 1—6 and a Rhythm part.

Each part corresponds to a musician. For example, part 1 might be a pianist, part 2 might be a bassist, etc. It goes without saying that the rhythm part is the drummer. The instrument (timbre) used by each musician can be freely selected, and changed even while playing. The rhythm part can select from four types of drum/percussion sets (rhythm sets). In addition, each Sound Patch can specify the volume of each instrument (level), the position of each instrument (pan), and the ambience of the performing environment (effect). Also, the sounds of two or more Parts can be combined to make even richer, more complex sounds. In this way, you can create Sound Patches with various combinations of instruments, and instantly change to an entirely different instrumental ensemble simply by selecting a Sound Patch.

●Keyboard Controller Section

The controller section sends playing instructions to the musicians. When you play the keyboard, the instrument of the specified part will sound. Use the bender lever to add vibrato or pitch change. Controller section settings can be stored as one of 64 keyboard patches.

When using a MIDI sequencer etc., you can use the keyboard to play along with the sequence.

The U-20 can also be used as a keyboard controller to control external sound generator modules.

The Modes of the U-20

The U-20 operates in
Play mode,
Edit mode, in which you modify or edit various settings, and
Data mode, in which you can store the results of your editing, and transfer data.

●Play Mode

The U-20 has 6 play modes.
In Link Play mode, Keyboard Patch mode, and Sound Patch mode, you can select Patches from the front panel.
In Part Play mode, you can select one of the six Parts, and play it from the keyboard.
In Rhythm Play mode, you can use the Rhythm Part to play rhythm sounds from the keyboard.
In ROM Play mode you can listen to the U-20's demonstration songs.

Play mode	Part played by the keyboard	Selected by the BANK and NUMBER buttons
Link Play mode	Parts specified by the Keyboard Patch	Keyboard Patch and Sound Patch
Keyboard Patch mode		Keyboard Patch
Sound Patch mode		Sound Patch
Part Play mode	Part selected from Parts 1—6 (use the panel buttons)	Timbre
Rhythm Play mode	Rhythm Part	Rhythm Set
ROM Play mode	Keyboard is inactive	ROM Play song

●Edit Mode

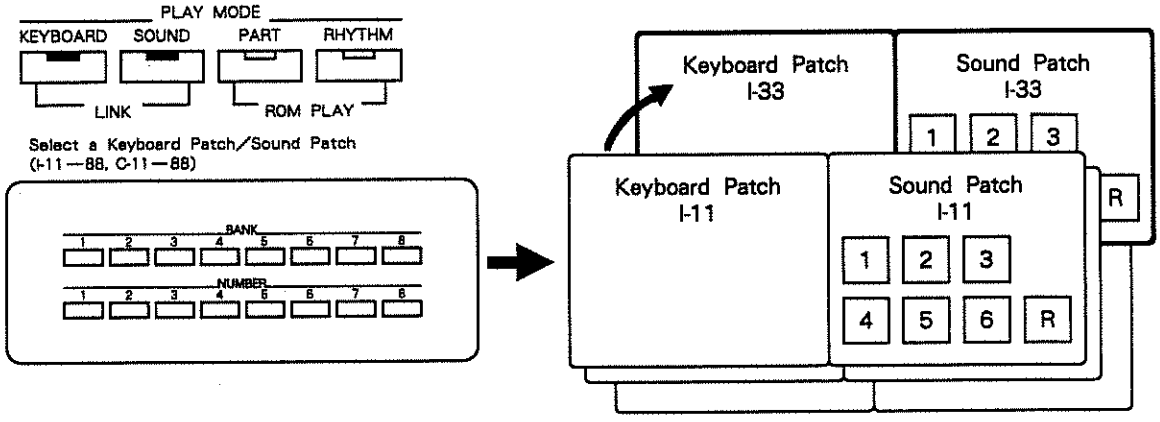
In this mode you can edit (change or modify) various control settings and tone settings. With a few exceptions, edited settings are temporary. If you want to keep your edited settings, use data mode operations to store them into internal memory or a separately sold RAM card.

●Data Mode

In this mode you can store edited settings into internal memory or a separately sold RAM card, or transmit data via MIDI.

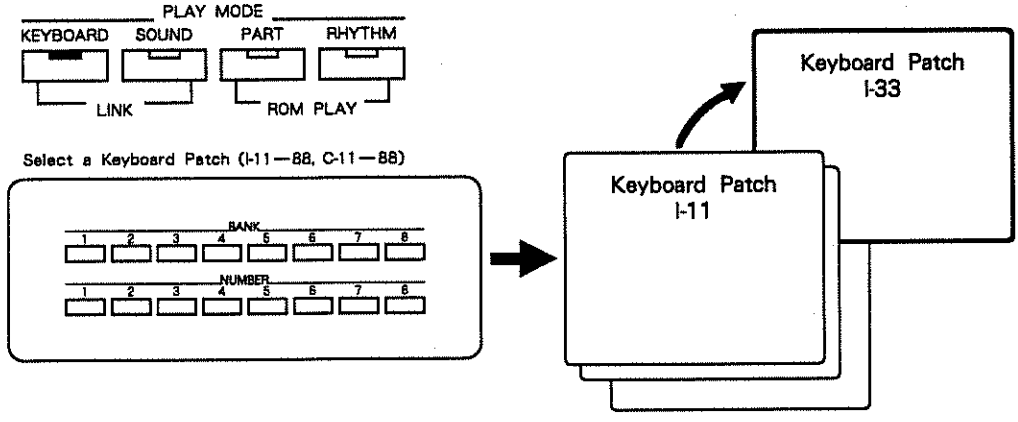
●Link Play mode (simultaneously selecting a Keyboard Patch and Sound Patch)

Example : selecting Patch I-33



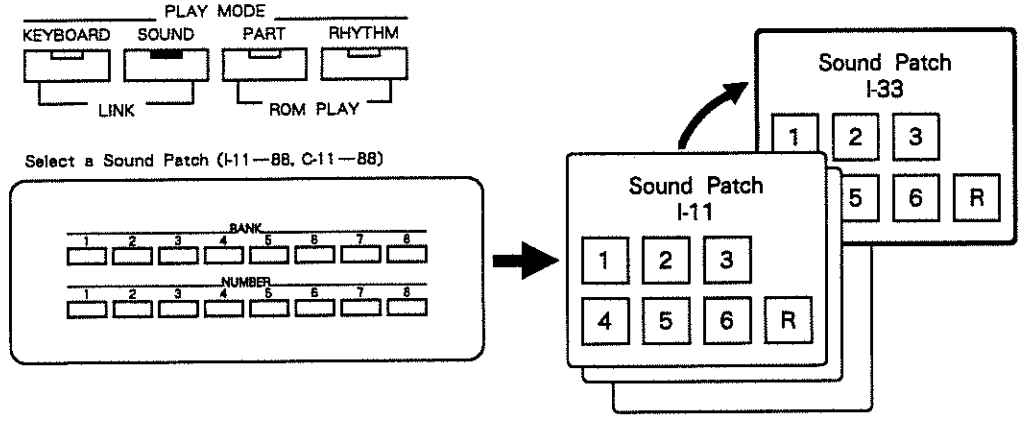
●Keyboard Patch mode (selecting only a Keyboard Patch)

Example : selecting Keyboard Patch I-33



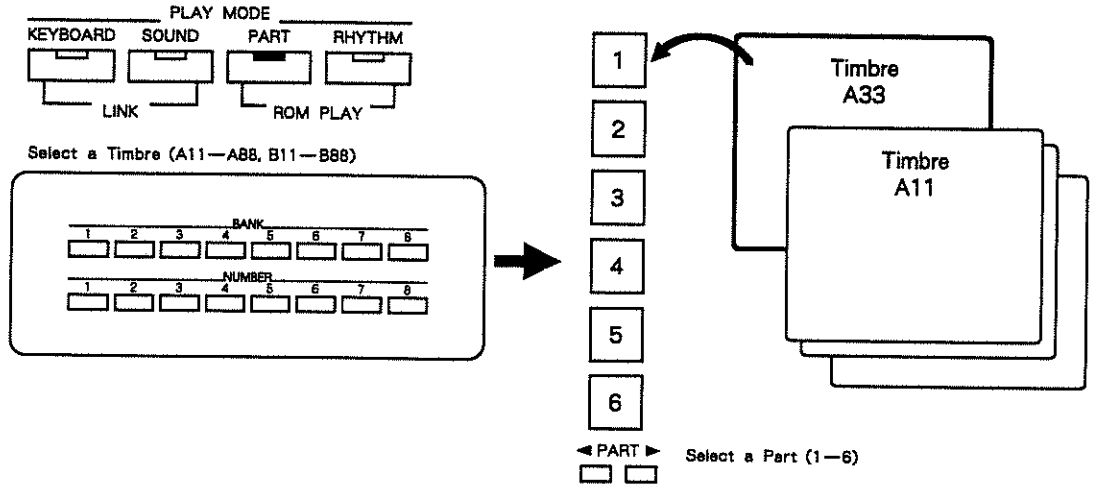
●Sound Patch mode (selecting only a Sound Patch)

Example : selecting Sound Patch I-33



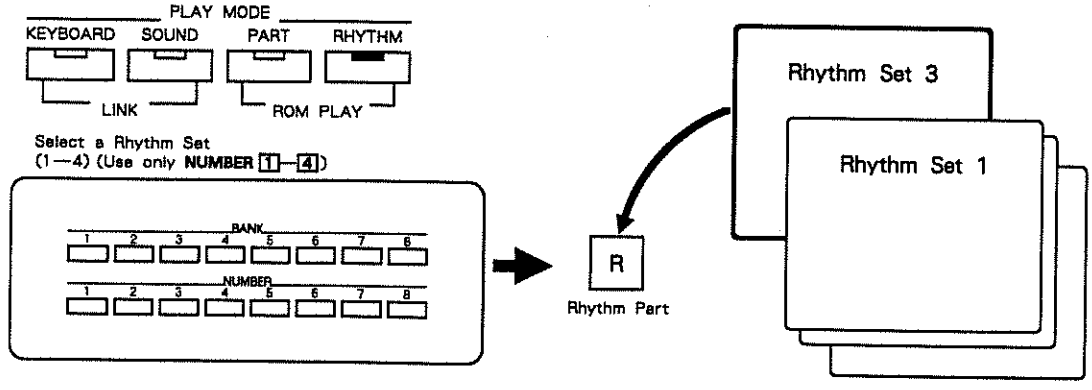
●Part Play mode (selecting a Timbre)

Example : selecting Timbre A33 for Part 1



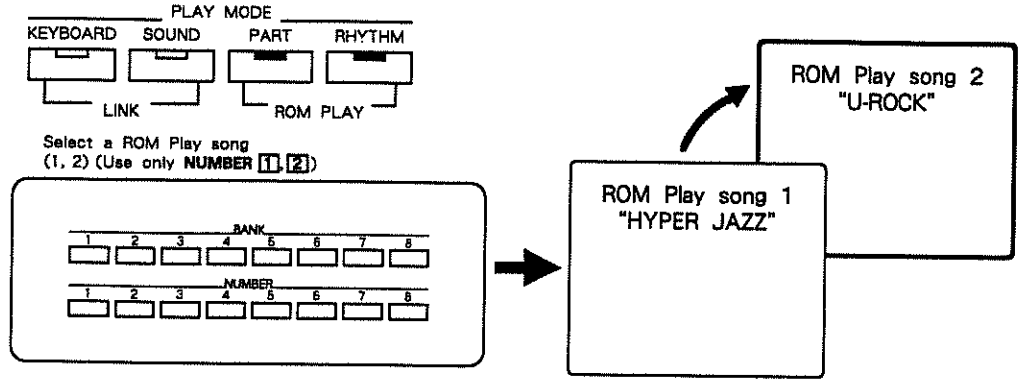
●Rhythm Play mode (selecting a Rhythm Set)

Example : selecting Rhythm Set 3 for the Rhythm Part



●ROM Play mode (selecting the ROM Play song)

Example : selecting ROM Play song 2 "U-ROCK"



4 TRY OUT THE SOUNDS

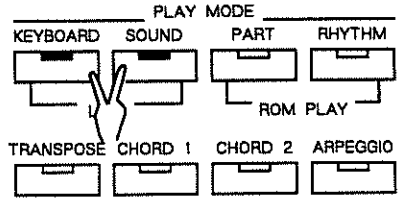
Here we will explain how to select play sounds in each of the play modes.

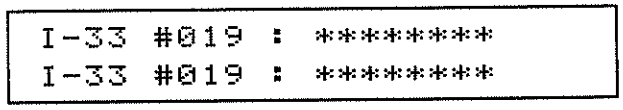
1. Select and Play sounds in Link Play Mode

In Link Play mode, pressing panel buttons will simultaneously select a Keyboard Patch (determining how the sounds are played) and a Sound Patch (determining which sounds are played). When shipped from the factory, the memory contains data intended to be played in Link Play mode.
By selecting a bank 1—8 and a number 1—8, you can select from 64 Patches.

Enter Link Play mode.

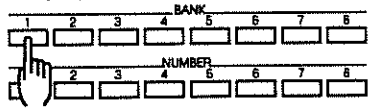
①

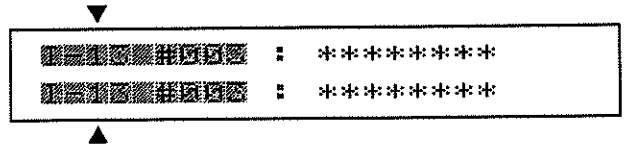




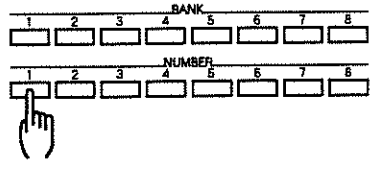
Use BANK [1]—[8] and NUMBER [1]—[8] to select Patches.
For example, here's how to select I-11.

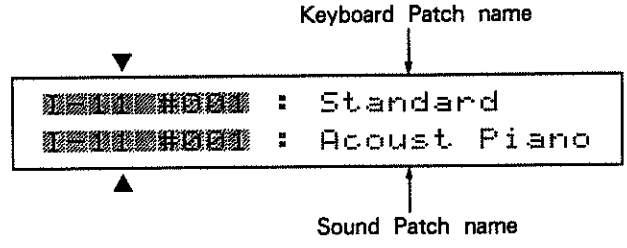
②





③





The display will show the number and name of the selected Patch.

Play the keyboard to hear the sound you have selected, and then select and play other Patches. The included sound patch chart shows the Patches available.

* The Patch will change when you select the number. Simply selecting the bank will not change the Patch.
* You can use [▽] **VALUE** [△] to step through the Patches one by one.

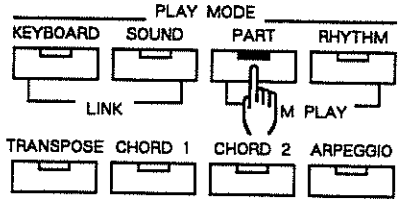
2. Play the Sounds (Part Play mode)

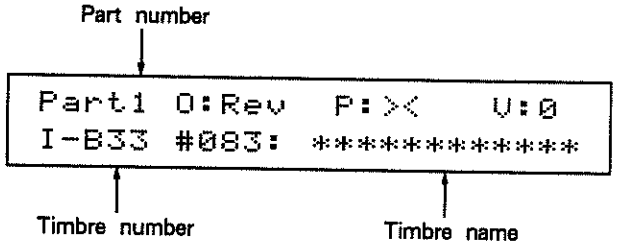
In part play mode you can use the Keyboard to select and play various sounds (Timbres) using a single Part of the selected Sound Patch (select from Part 1—6). Part play mode is convenient when checking the settings of each Part, or when editing sounds.

You can select from 128 Timbres, organized as group A/B, bank 1—8, and number 1—8.

Enter Part Play Mode.

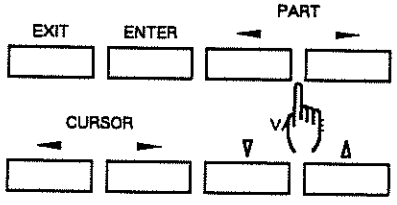
①

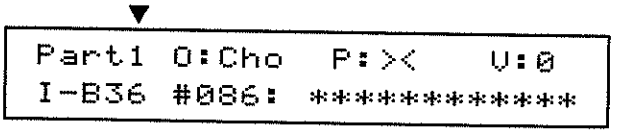




Select and play Parts, noticing the various sounds assigned to each Part.

②

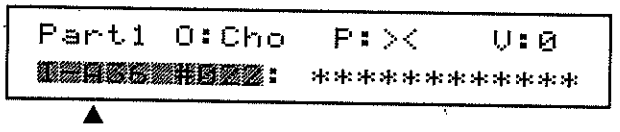


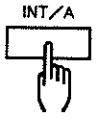


Play the keyboard to hear the displayed Timbre.

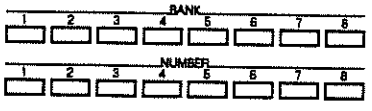
Next, select a different Timbre. Use group (A/B), bank (1—8) and number (1—8) to select a Timbre.

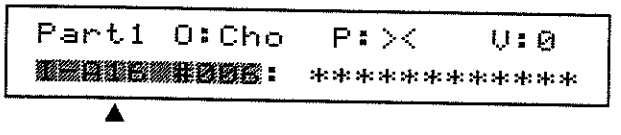
③



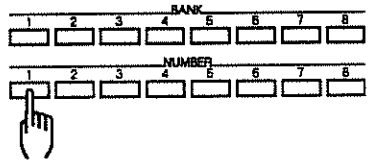


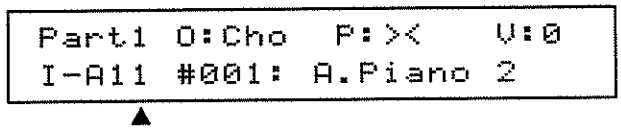
④





⑤





The included "Timbre Chart" lists the available timbres.

* The sound will change when you specify the number. Simply selecting a group or bank will not make the sound change.
* Press [▽]**VALUE**[△] to step through the sounds.
* In part play mode, notes you play will not be transmitted from MIDI OUT.
* Depending on the settings of the selected sound patch (key range, velocity range, see page 95), the resulting sound may not be what you expect.

Keyboard Patch mode
When you want to select only the Keyboard Patch, press [**KEYBOARD**]. When you press panel buttons to select a patch, only the Keyboard Patch will change.

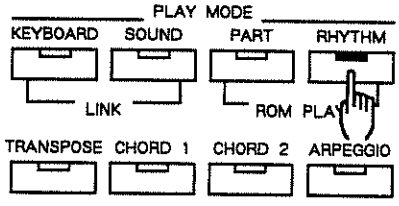
Sound Patch mode
When you want to select only the Sound Patch, press [**SOUND**]. When you press panel buttons to select a patch, only the Sound Patch will change.

3. Play the Rhythm Sounds (Rhythm Play Mode)

To play the rhythm sounds from the keyboard, enter rhythm play mode. Rhythm play mode is useful when checking a rhythm set, or when editing sounds.

Enter rhythm play mode.

①



```
I-R1: Standard Set  V:0
C2  :  I-128  So:C2  Mu:Off
```

When you play the keyboard, the rhythm sound corresponding to each key will sound. The display will show the note name etc. of the key you pressed. For the factory settings, refer to the table at the end of this manual.

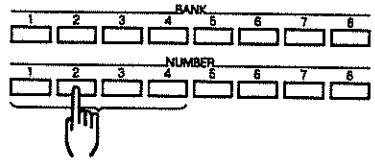
②

```
I-R1: Standard Set  V:0
D2  :  I-128  So:D2  Mu:Off
```

▲

Use NUMBER [1]—[4] to select another rhythm set.

③



▼

```
I-R2: Dry Set       V:0
D2  :  I-128  So:D2  Mu:Off
```

* Press [▽]**VALUE**[△] to step through the rhythm sets.
* In rhythm play mode, notes you play will not be transmitted from MIDI OUT.

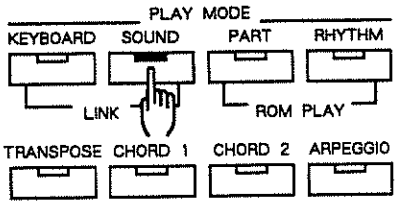
About Rhythm Sets

A rhythm set is an arrangement of rhythm sounds assigned to each key (note). A different sound can be assigned to each of the U-20's 64 keys B1—D7. Internal memory can store four rhythm sets. A rhythm set can be selected for a rhythm part.

■Checking the Selected Parts

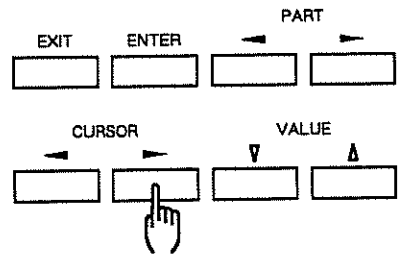
The U-20's multi-timbral sound generator has 6 Parts and a Rhythm Part. In play modes which select Patches, such as Link Play mode, the Parts specified by the Keyboard Patch will determine which Parts are used. Here's how to see which Parts are currently being used.

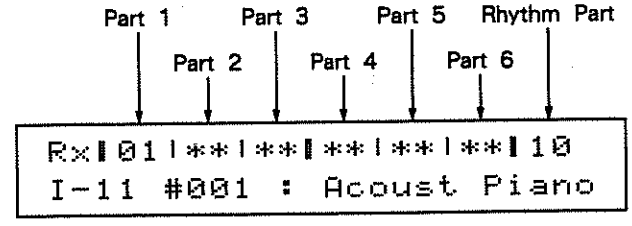
Enter Sound Patch mode.



```
I-11 #001 : Standard
I-11 #001 : Acoust Piano
```

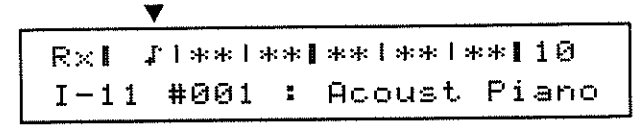
Press CURSOR [►]. (If you press [◄]CURSOR you will return to the previous display.)





*The upper line of the display shows the Rx channel of each Part.

The Rx channel of the Part specified by the Keyboard Patch will be shown as an ♪ symbol. (With the factory settings, Parts specified "01" are used.)

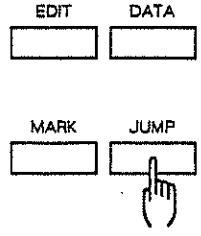


■ Master Tuning

When you need to modify the overall pitch of the U-20, use the following procedure to make fine adjustments in pitch (tuning).

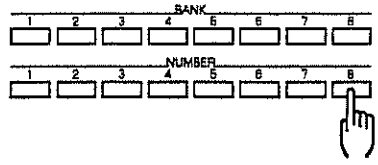
Get the master tuning display.

①



```
Part1 O:Rev   P:><    V:0
Jump:  Select Switch.
```

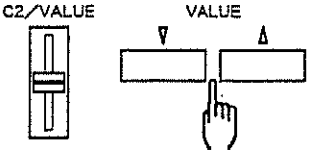
②



```
Edit/Setup/M.Tune
Master Tune=▒▒▒▒Hz
```

Use ▽VALUE△ or the VALUE slider to adjust the pitch.

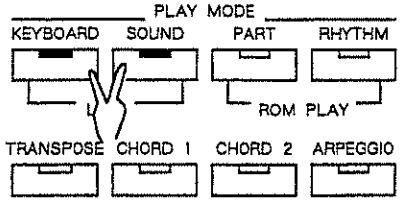
③



```
Edit/Setup/M.Tune
Master Tune=▒▒▒▒Hz
```

When you are finished, return to play mode.

④



```
I-11 #001 : Standard
I-11 #001 : Acoust Piano
```

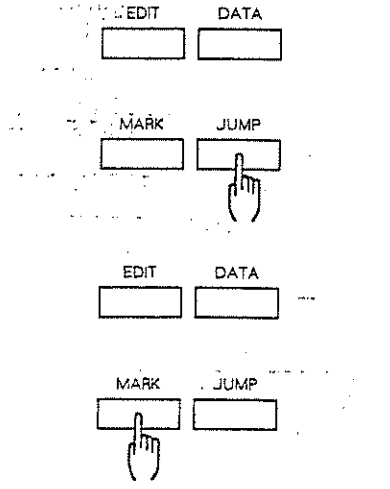
*The displayed value shows the approximate frequency of the pitch of the A4 key.
*The master tuning setting will be remembered even when the power is turned off.

■ Editing procedure using the Jump function

The U-20's jump function allows you to quickly move to a desired display. You can use the jump function for more efficient editing. The owner's manual will explain procedures for efficient use of the jump function.
Editing procedure using the jump function is as follows.

①Use the jump function to jump to the desired parameter display (menu display).
②In a menu display, use ◄CURSOR► to select the parameter group, and press ENTER (a parameter display appears).
③In a parameter display, use ◄CURSOR► to select the parameter.
④Use ▽VALUE△ or the VALUE slider to modify the value.
⑤When finished, press the play mode select button to return to play mode.

* For details of the editing procedure, see "Edit Mode Operations" (☞page 122).
* Some of the jump destinations can be re-defined by you, to fit your needs better. If you are using the U-20 for the first time, and the jump destinations are different than those explained in the manual, you can use the following procedure to reset the jump destinations to their factory settings.



```
Jump:  Select Switch.
```

```
Initialize Jump Page
Sure?   [ENTER] / [EXIT]
```

```
Initialize Jump Page
   Function Complete.
```

The jump destinations will be reset to their factory settings, and you will return to the previous display.

SECTION I

Playing : step 2

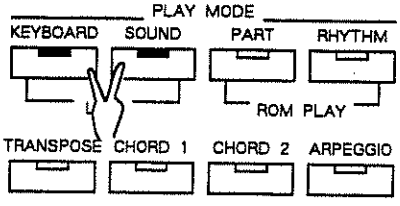
In section I, we will explain how to use the performance functions to enhance your playing. Try out the operations explained here for yourself, and see how they sound.

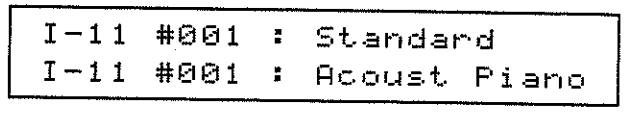
1 USING AND SETTING THE PERFORMANCE FUNCTIONS

1. How To Use the Play Functions

Here we will explain how to use and set the performance functions, and simple settings for them. The resulting effect of these play functions is determined by each sound. Depending on the selected sound, the play functions may have a different effect, or no effect at all.

In section 0, you listened to the sounds using each of the Play modes. To follow the explanation in this section, please enter Link Play mode.



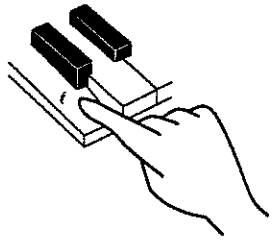


a. Keyboard control functions

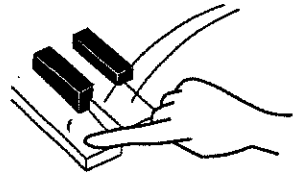
The sound can be affected by how you play the keyboard.

●Velocity

The force (speed) with which you play a key is known as the "velocity". The velocity can modify the volume.



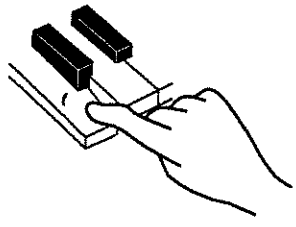
When you press a key slowly, a quiet sound is produced.



When you press a key quickly, a loud sound is produced.

●Aftertouch

Pressing down on a key after playing it can modify the pitch/vibrato/volume. This is known as "aftertouch".

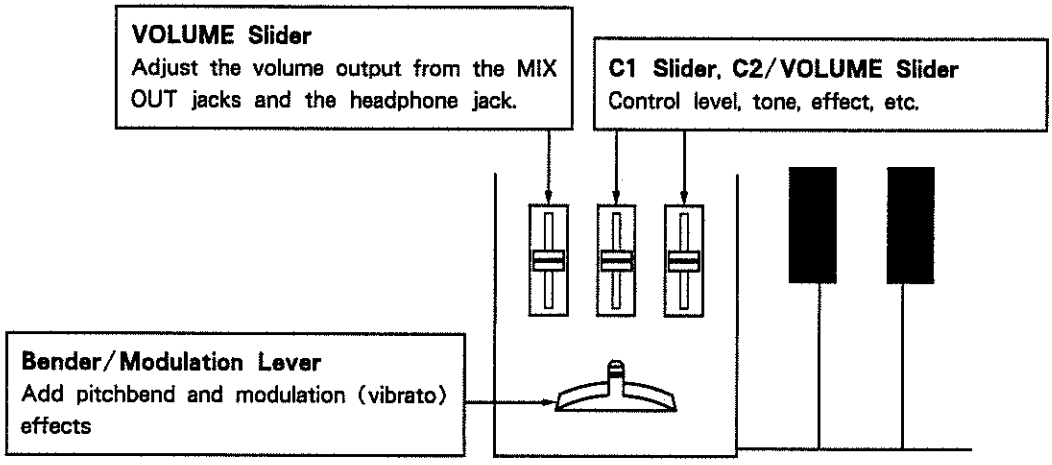


Press down firmly.

* For some sounds of the factory settings, aftertouch will have no effect.

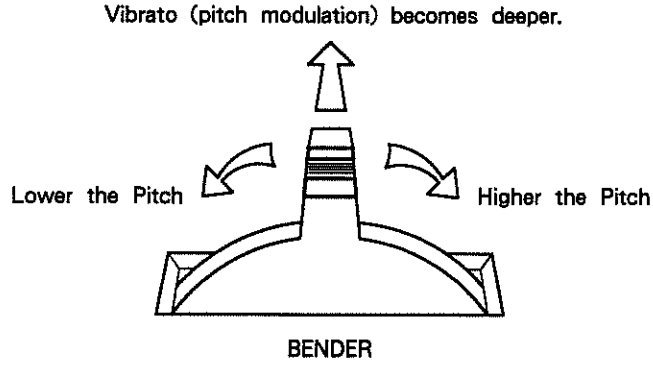
b. Panel control functions

The front panel provides the following functions to use while playing.



●Bender/Modulation Lever

The position of the bender/modulation lever can affect the pitch or vibrato as follows.



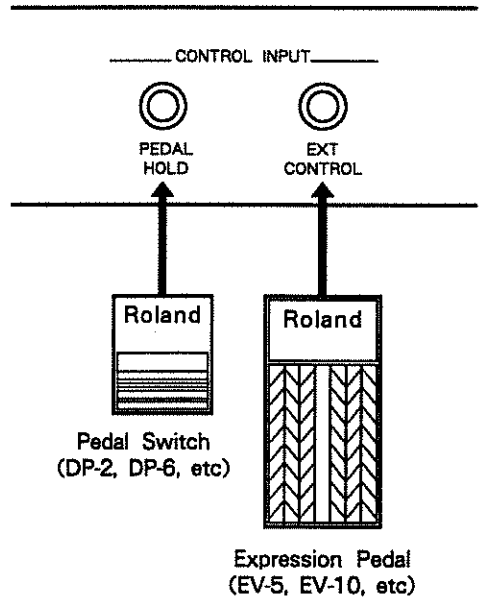
●C1 Slider, C2/VALUE Slider

The C1 and C2 sliders can be used to control internal sounds or to control external sound generators. Each slider can be assigned to control something different. With the factory settings, C1 and C2 are not assigned to control internal sounds.

* The control functions correspond to MIDI control changes.
* To set the function of the control sliders, see "Using Controllers" (☞page 101).

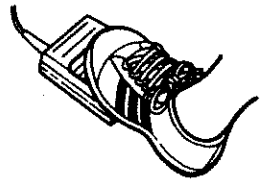
c. Pedal control functions

Pedals connected to the rear panel jacks can perform the following control functions.



●Hold

A separately sold pedal switch (DP-2, DP-6, etc.) can be used to control hold. The hold function sustains the sound as long as the pedal is pressed.



Hold as long as the pedal is pressed

* The hold function will not affect non-sustaining sounds such as rhythm sounds.

●External Control

A separately sold expression pedal (EV-5, EV-10, etc.) can be used in the same way as the C1 and C2 sliders on the front panel to control internal sounds or external sound generators. With the factory settings, External control is not assigned to control internal sounds.

* The control functions correspond to MIDI control changes.
* To make control function settings, see "Using Controllers" (☞page 101).

d. Useful performance functions

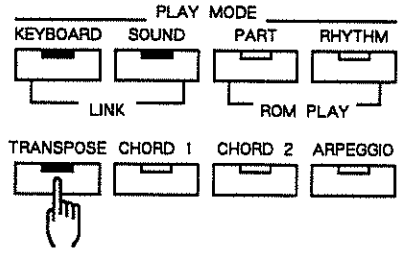
The U-20 includes various functions that are especially useful for live performance; key transpose, chord play, and arpeggio play. By defining how these functions will work, you can turn them on/off at the touch of a button.

* Edited settings are temporary. If you want to save your edited settings, be sure to write them into memory (☞page 37).

■ Key Transpose

Key transpose shifts the keyboard range in half-steps, allowing you to play in a different key while using the same fingering. You can transpose over a range of ± 3 octaves.

Each time you press **TRANSPOSE**, key transpose will be switched on/off. When on, the button indicator will light. With the factory settings, this will lower the pitch one octave.

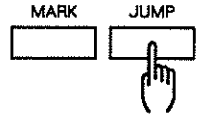


Use the following procedure to change the key transpose setting.

Jump to the key transpose setting display.

① EDIT DATA

MARK JUMP



```
I-11 #001 : Standard
Jump:  Select Switch.
```

② 

```
Edit/Kybd/Perform/Trans
   Key Transpose=
```

Use ▽VALUE△ or the VALUE slider to set the amount of transposition (−36—+36 in semitone steps).

③ 

```
Edit/Kybd/Perform/Trans
   Key Transpose=
```

When you finish making settings, return to play mode.

④ 

```
I-11 #001 : Standard
I-11 #001 : Acoust Piano
```

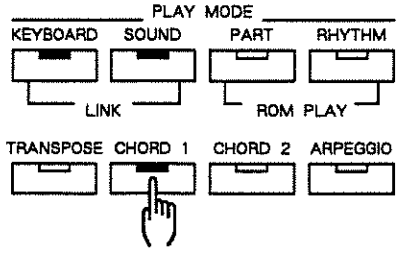
■Chord Play

Chord play allows you to play a chord by pressing a single key. Try it out using the pre-defined set of chords.

Chord Set
A different chord can be set for each of the 12 notes C, C♯—B. Chord settings for each of the 12 notes can be stored as a Chord Set. Internal memory holds eight different Chord Sets. For details of these settings, refer to "Creating a Chord Set" (☞page 39).

While playing, you can instantly select from the chord sets defined for the **CHORD 1** and **CHORD 2** buttons.

Press **CHORD 1**. The button indicator will light, and you can play the chords of **CHORD 1**.



Press each key in succession. The chord assigned to each key will sound. When more than one key is pressed, the chord of the last-pressed key will sound.

Press [CHORD 1] again to return to normal playing (the indicator goes out).
Select **CHORD 2** in the same way. To switch directly from **CHORD 1** to **CHORD 2**, simply press [CHORD 2], and vice versa.

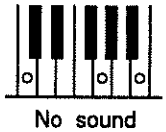
Settings for Key Offset and Retrigger Mode allow you to specify how the chord set assigned to each button will be used.

Key Offset: The chord set can be transposed over a range of 0—11 (semitone steps). Use this when you want to use the same set of chords to play a song in a different key.

Retrigger Mode : If more than one key is pressed and a chord is sounding, this determines which chord will be sounded when the key producing the currently sounded chord is released. Retrigger mode can be set to Off, Low, or Hi. The velocity of a retriggered chord will be determined by the speed at which you release the key.

Example : When several keys are being pressed and the chord assigned to E key is sounding, here's what happens when you release the E key.

Retrigger Mode : Off



No sound

Retrigger Mode : Low

The chord of the lowest key will sound

Retrigger Mode : Hi

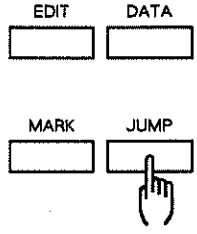
The chord of the highest key will sound

●Chord Set Assign and other Settings

CHORD 1 and **CHORD 2** can each use one of the 8 chord sets. To select a chord set or make settings for key offset or rerigger mode, use the following procedure.

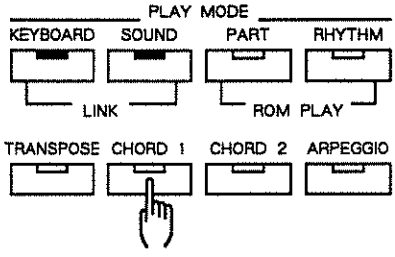
Jump to the chord set assign display.

①



```
I-11 #001 : Standard
Jump:   Select Switch.
```

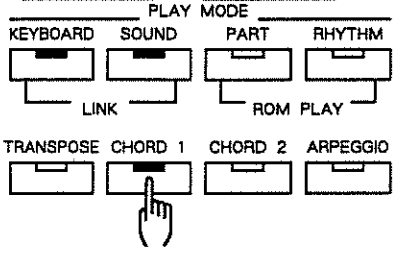
②



```
Edit/Kybd/Perform/Chord1
  Chord=#▒:Diatonic     ▶
```

Press [CHORD 1] or [CHORD 2] to select the button for which you want to select a chord set.

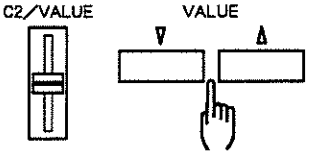
③



```
Edit/Kybd/Perform/Chord1
  Chord=#▒:Diatonic     ▶
```

Select a chord set (1—8).

④



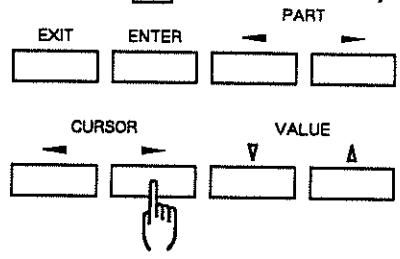
```
Edit/Kybd/Perform/Chord1
  Chord=#▒:Sus4         ▶
```

Chord Set number

If desired, set the key offset and retrigger mode.

Press CURSOR ▶ to make the key offset value blink.

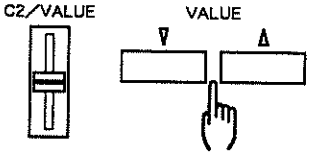
⑤



```
Edit/Kybd/Perform/Chord1
◀KeyOffset=▒   Retrig=Hi
```

Set the key offset.

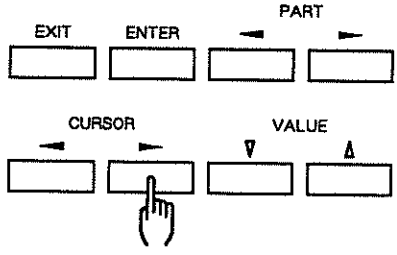
⑥



```
Edit/Kybd/Perform/Chord1
◀KeyOffset=▒   Retrig=Hi
```

Press CURSOR ▶ to make the retrigger mode value blink.

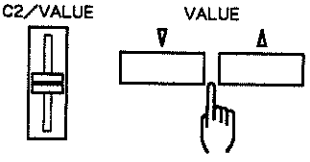
⑦



```
Edit/Kybd/Perform/Chord1
◀KeyOffset=0   Retrig=▒▒
```

Select the retrigger mode.

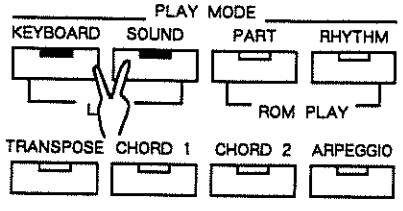
⑧



```
Edit/Kybd/Perform/Chord1
◀KeyOffset=0   Retrig=▒▒
```

When you finish making settings, return to play mode.

⑨

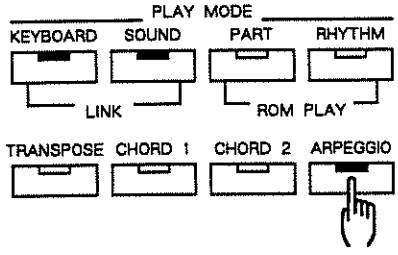


```
I-11  #001 : Standard
I-11  #001 : Acoust Piano
```

■ Arpeggio Play

Arpeggio play allows you to play an arpeggio of the chord being pressed. The arpeggiation pattern can also be set.

Pressing **ARPEGGIO** will turn arpeggio play on/off. When turned on, the button indicator will light. When you play a chord on the keyboard, it will be arpeggiated.



Four types of arpeggio are available. The selected type will determine how the notes of the chord will be played.

Type	Sound
Up	Notes being pressed will sound from low to high.
Down	Notes being pressed will sound from high to low.
Up & Down	Notes being pressed will sound from low to high and back to low.
Random	Notes being pressed will sound at random.

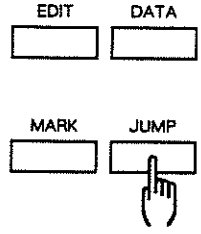
In addition to the arpeggio type, you can also specify the speed (rate) at which the notes will be arpeggiated.

●Arpeggio Type and Rate Settings

Here's how to change the arpeggio type and rate.

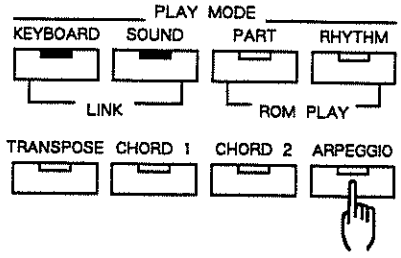
Jump to the arpeggio setting display.

①



```
I-11 #001 : Standard
Jump:  Select Switch.
```

②

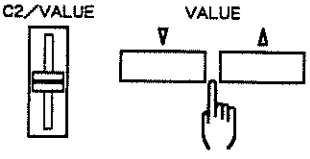


```
Edit/Kybd/Perform/Arpe
 Type=Up&Down   Rate=100
```

Type　　Rate

First select the Type.

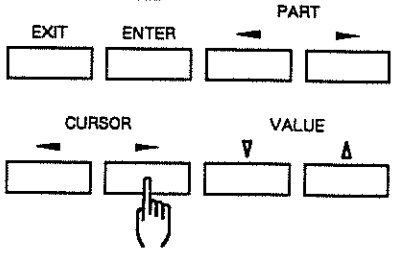
③



```
Edit/Kybd/Perform/Arpe
 Type=Up&Down   Rate=100
```

Press CURSOR[►] to make the rate value blink.

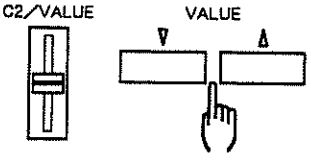
④



```
Edit/Kybd/Perform/Arpe
 Type=Up&Down   Rate=100
```

Set the rate. Higher settings will result in faster arpeggiation.

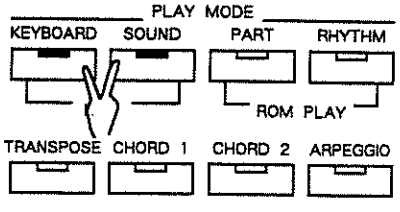
⑤



```
Edit/Kybd/Perform/Arpe
 Type=Up&Down   Rate=100
```

When you finish making settings, return to play mode.

⑥



```
I-11 #001 : Standard
I-11 #001 : Acoust Piano
```

2. Write the Edited Performance Function Settings

The settings we have edited so far (key transpose, chord, arpeggio) can be stored together as a keyboard patch. Here we will explain how to write these edited settings into memory along with a patch name.

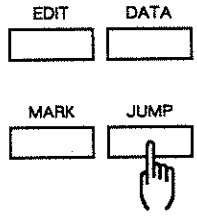
* For details of keyboard patches, see section Ⅲ.

a. Name

Here's how to change the name of a keyboard patch.

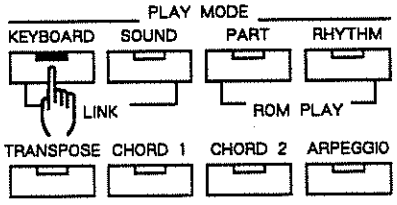
Select the patch name display.

①



```
I-11 #001 : Standard
Jump:  Select Switch.
```

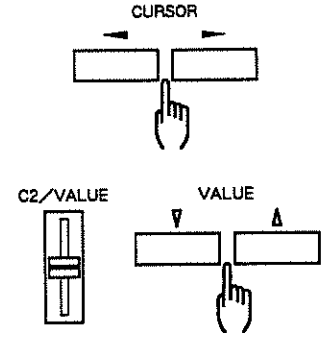
②



```
Edit/Kybd/Name
 Patch Name=**********
```

Move the cursor (underline) to the character you want to change, and select a different character.

③④



```
Edit/Kybd/Name
 Patch Name=*********
```

```
Edit/Kybd/Name
 Patch Name=N*********
```

⋮

```
Edit/Kybd/Name
 Patch Name=New KeyPatch
```

* The following characters can be used;
  (space) A—Z a—z 0—9 − / + * . , : ; = ! " # $ % & ' ( ) < > { } [ ] _ ? ♪
* Pressing **NUMBER** [1] will insert a space. Pressing **NUMBER** [2] will delete the character at the cursor, and move the remaining characters forward.

After changing the name, continue to the following write operation.

b. Write

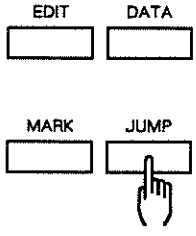
Now let's store all the edited performance function settings we edited. Here we will explain how to write the edited keyboard patch settings into the same patch number.

* The On/Off setting for each performance function is also memorized. The indicator of each button shows the condition.
* It is not necessary to write data into memory each time you edit a performance function.
* To store edited keyboard patch settings into a different patch number, see "Data Mode Operations" (☞page 128).

Use the following procedure while editing a performance function. Jump to the keyboard patch write display.

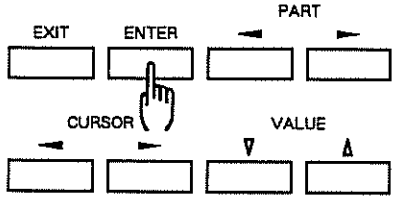
Jump to the write display.

①



```
Edit/Kybd/Name
Jump:   Select Switch.
```

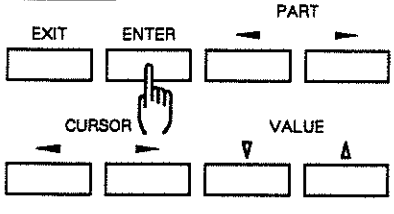
②



```
Data/Write/Kybd
Write          Temp:I11 →I11
```

Press [ENTER] once again.

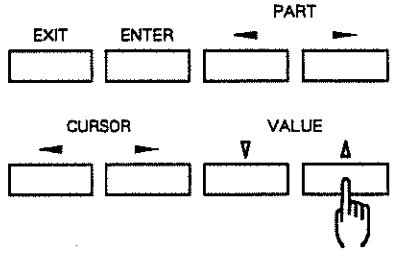
③



```
Data/Write/Kybd
Sure?  [VALUE▲] / [EXIT]
```

If you are sure you want to store, press VALUE[△]. (To quit without storing, press [EXIT] to return to the display of step ②.)

④



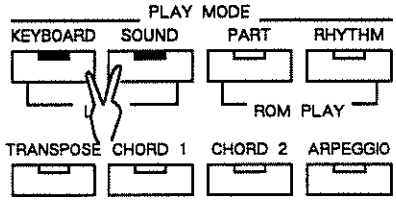
```
Data/Write/Kybd
   Function Complete.
```

↓ and in a short time.

```
Data/Write/Kybd
Write          Temp:I11 →I11
```

This completes the writing operation. Return to play mode.

⑤



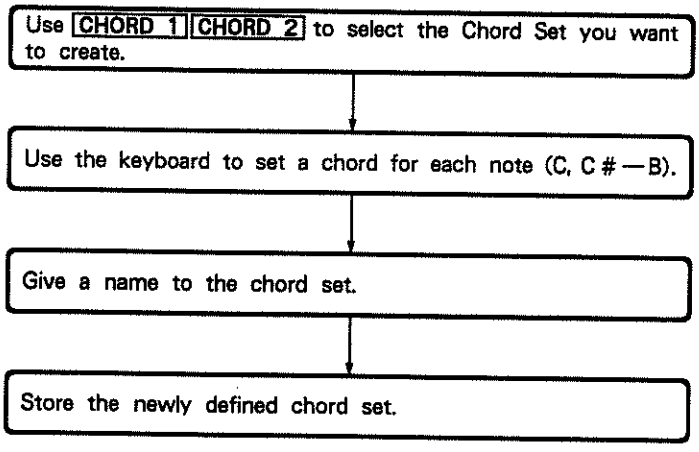
```
I-11 #001 : New KeyPatch
I-11 #001 : Acoust Piano
```

2 CREATING A CHORD SET

In "Useful the Performance Functions", we explained how to select pre-defined Chord Sets and how to use the Chord Play function. Here we will explain how to create a Chord Set suitable for the song you are playing.

■ Creating A Chord Set

Here's how to create a chord set.

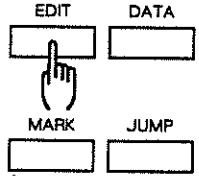


a. Editing a chord set

Select either of the chord sets assigned to the keyboard patch, and edit the chord for each note.

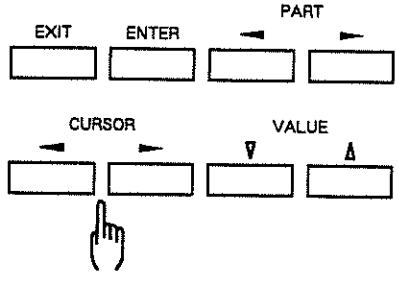
Enter edit mode.

①

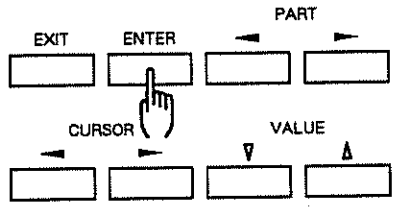


Select "Chord".

②



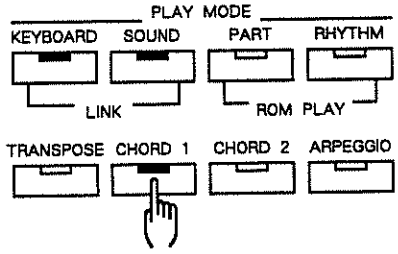
③



```
Edit/Chord[2]
Name▮Note
```

Select the button of the chord set you want to edit (the button indicator will light).

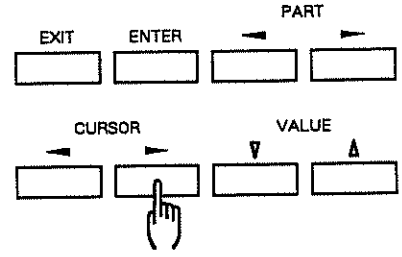
④



```
Edit/Chord[1]
Name▮Note
```

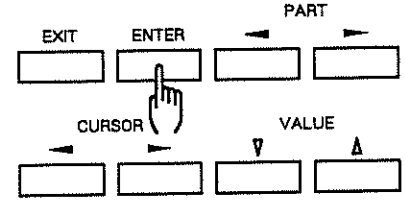
Select "Note".

⑤



```
Edit/Chord[1]
Name▮
```

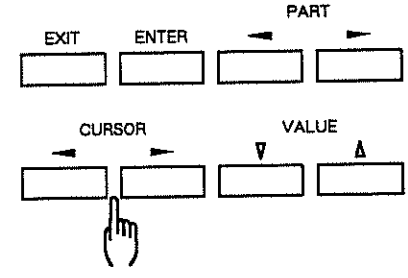
⑥



```
Edit/Chord[1]/Note
▮ :      Note=♪♪
```

This is the chord setting display. Select the note (C, C#—B) for which to define a chord.

⑦



```
Edit/Chord[1]/Note
▮ :      Note=♪♪♪♪
```

Play a chord on the keyboard. The chord will be defined when you remove your hand from the keyboard.

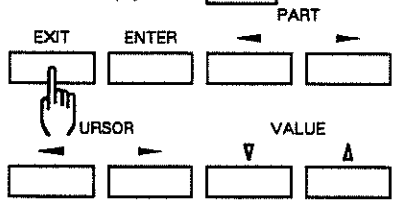
⑧ Playing a D major chord.

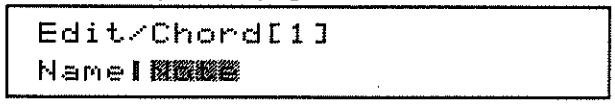
```
Edit/Chord[1]/Note
▮ :      Note=♪♪♪
```

If you want to define a chord for another note, repeat steps ⑦—⑧.

When finished, press [EXIT] to return to the display of step ④.

⑨





If you want to change the name of the chord set, follow the procedure explained below.

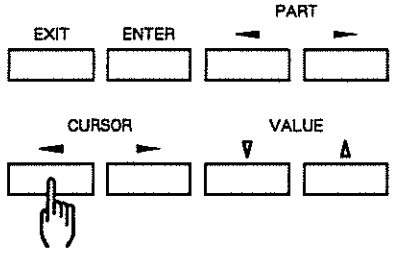
* The ♩ characters in the display indicate the number of notes in the chord.
* To re-do the settings of step ⑧, release all the keys, and play a chord again.
* In step ⑧, you may continue to add notes as long as a key is still being pressed.
* Each chord may contain up to 8 notes.
* You are free to set any type of chord for each key. For example, a C major chord can be assigned to the D key.
* You may use the keyboard to specify a chord at any time in the chord setting display.

b. Chord set name

Here's how to change the name of a chord set.

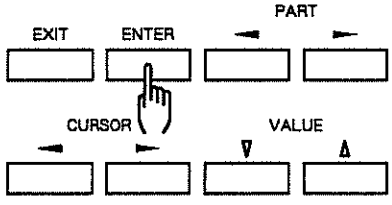
Select "Name".

①



```
Edit/Chord[1]
▓▓▓▓ Note
```

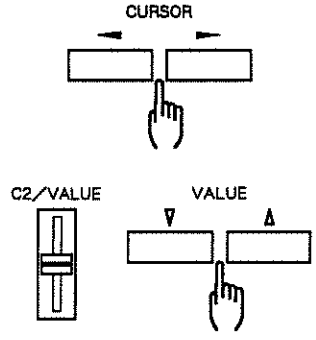
②



```
Edit/Chord[1]/Name
 Chord Name=*************
```

Move the cursor (underline) to the character you want to change, and select a different character.

③④



```
Edit/Chord[1]/Name
 Chord Name=*************
```

```
Edit/Chord[1]/Name
 Chord Name=N************
```

⋮

```
Edit/Chord[1]/Name
 Chord Name=New ChordSet
```

* The following characters can be used ;
  (space) A—Z a—z 0—9 - / + * . , : ; = ! " # $ % & '
  ( ) < > { } [ ] _ ? ♪
* Pressing **NUMBER** 1 will insert a space. Pressing **NUMBER** 2 will delete the character at the cursor, and move the remaining characters forward.

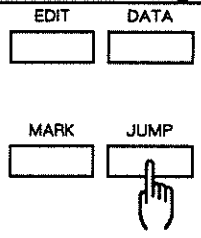
After changing the name, continue to the following write operation.

c. Writing a chord set into memory

Now let's store the chord set we edited into its original chord set number.

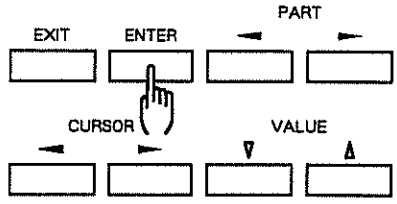
From the chord set editing display, jump to the write display.

①



```
Edit/Chord[1]/Name
Jump:  Select Switch.
```

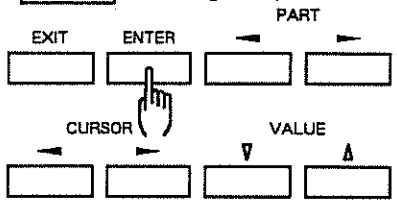
②



```
Data/Write/Chord[1]
Write                Temp:I1 →I1
```

Press [ENTER] once again. (To cancel the operation, press [EXIT] to return to the step ② display.)

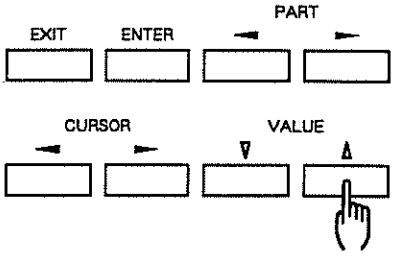
③



```
Data/Write/Chord[1]
Sure?  [VALUE▲] / [EXIT]
```

If you are sure you want to store the chord set into memory, press VALUE[△].

④



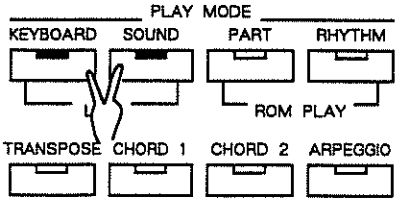
```
Data/Write/Chord[1]
   Function Complete.
```

↓ and in a short time,

```
Data/Write/Chord[1]
Write                Temp:I1 →I1
```

This completes the writing operation. Now return to play mode.

⑤

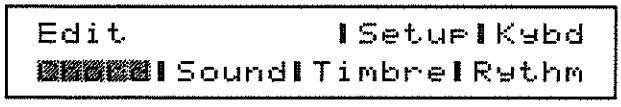


```
I-11 #001 : Standard
I-11 #001 : Acoust Piano
```

■ Adjusting the Display Contrast

At some angles, it may be difficult to read the characters in the U-20's display. In such cases, use the following procedure to adjust the contrast (brightness) of the display.

① Press [EDIT].



② Press [◄]CURSOR several times to select Setup (blinking).

③ Press [ENTER].

④ Use [◄]CURSOR[►] to select LCD (blinking).

⑤ Press [ENTER].

This allows you to adjust the display contrast.

⑥ Use the VALUE slider or [▽]VALUE[△] to adjust the contrast (0—15).

⑦ When you are finished, return to play mode.

* The contrast setting will be remembered even when the power is turned off.

SECTION II

Editing

— Create your own sounds —

In section II you will learn how to modify the U-20's sounds (Sound Patches, Timbres) to create your own original sounds.

1 BEFORE YOU CREATE YOUR OWN SOUNDS

Before you begin creating your own sounds, read this section to learn how the sound generator in the U-20 creates sounds.

1. Tones

Here we will explain the features of the U-20's RS-PCM sound generator.

●RS-PCM Sound Generators

RS-PCM stands for ReSynthesized Pulse Code Modulation. PCM is a method of storing a sound waveform as a digital sound recording. However, simply recording and playing back the sound of an instrument does not always give musically appropriate results.
RS-PCM uses Roland's unique technology to analyze, modify, and "resynthesize" the PCM recorded instrumental sound. This results in a realistic sound that can be controlled in musically appropriate ways.
The basic sound of the RS-PCM sound generator is the "Tone". Internal memory contains 128 Tones. PCM cards (sound library cards (SN-U110 series) for the U-110) can also be used, providing even more sounds.

The U-20 does not simply use the Tones as they are, but allows you to modify the way in which volume and pitch change, or how vibrato is applied. This lets you easily create your own sounds.

●Types of Tone and Simultaneous Polyphony

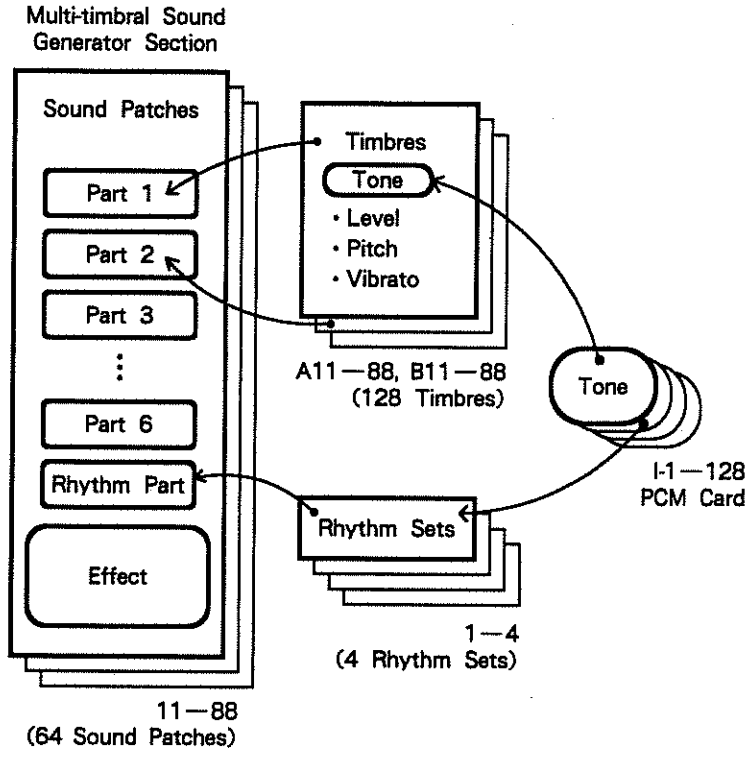
The U-20 can produce up to 30 sounds (voices) at once, but this will depend on the type of Tones being used. Tones which consist of a single voice can play up to 30 notes. Tones which consist of two voices can play up to 15 notes. (☞Refer to page 59, "Tone select".)

●Pitch Range

Tones have an upper limit beyond which they cannot produce sound.
Each acoustic instrument has a different sound-producing range, and the sound-producing ranges of the U-20's sounds are based on these ranges.

2. About the Multi-timbral Sound Generator

Here we will give a simple explanation of the multi-timbral sound generator.



●Timbres

Timbres are the basic unit of sound which you will play. 128 different Timbres can be created. Each Timbre has settings which determine the level, pitch and vibrato of the tone and parameters which determine how the tone will be affected by velocity, aftertouch, and the bender lever.

●Rhythm Set

A different tone can be assigned to each key to create a drum/percussion set. 4 sets can be stored in the U-20's internal memory.

●Parts

One part corresponds to a single conventional sound generator module. The U-20 has 6 parts and a rhythm part.
Timbres are assigned to parts 1—6, and a rhythm set is assigned to the rhythm part. Volume and pan can be adjusted and an effect can be selected for each part.

●Sound Patches

A Sound Patch is a collection of part settings and effect settings ; i.e., the Sound Patch determines the instrumental ensemble. 64 Sound Patches can be stored in the U-20's internal memory.

3. Sound Creating Procedure

Here we will explain how to create your own Sound Patches, Timbres, and Rhythm Sets.

■ Creating a Sound Patch

A Sound Patch consists of 6 Parts and a Rhythm Part, but playing the keyboard will not necessarily sound all of the Parts. Settings of the Keyboard Patch and Sound Patch will determine which Parts are played by the keyboard.
The factory settings include Sound Patches for which the keyboard will play only Part 1, and also Sound Patches which use two or more Parts (Timbres) to create a sound. A musically appropriate effect such as reverb or chorus is assigned to each Sound Patch.
In this way, a Sound Patch consists of settings which determine the overall sound ; the Timbre used by each Part, and the effect applied to the sound.
By specifying a Keyboard Patch performance function appropriate for the corresponding Sound Patch, Link Play mode can be used even more effectively.

* To create sounds using two or more Parts, refer to section Ⅲ.

■ Creating a Timbre

A Timbre determines how sound is produced. Internal memory contains 128 Timbres. If you want to change certain aspects of the sound, such as deepening the vibrato or making a faster attack, you must "edit" the Timbre. Editing a U-20 Timbre is much simpler than editing a synthesizer sound, and creating your own sounds is quick and easy.
Sounds can be created using Tones from a PCM card (optional) in addition to internal Tones, for even greater possibilities.

■ Creating a Rhythm Set

The U-20 lets you create and store 4 Rhythm Sets.
As you learned when you played the keyboard in Rhythm Play mode, each Rhythm Set consists of a rhythm sound assigned to each of the keys. Rhythm Set settings allow you to change the sound assigned to each key, and adjust its pan or level to an appropriate balance. As with Timbres, you can also create the sound that will be used. Make these settings when using the U-20 to play rhythms under the control of a external rhythm machine or sequencer.

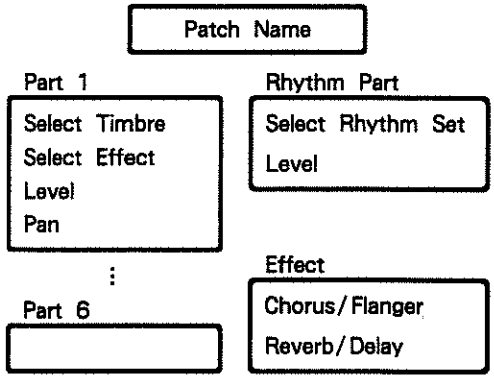
* A separately sold RAM card (M-256E) can be used to increase the number of available Patches and Timbres. To use a RAM card, see "Using a RAM Card" (☞page 128.).

2 SOUND PATCH SETTINGS

Here we will edit the settings of a Sound Patch, and determine how the effect and various Parts will be used.

1. Editing a Sound Patch

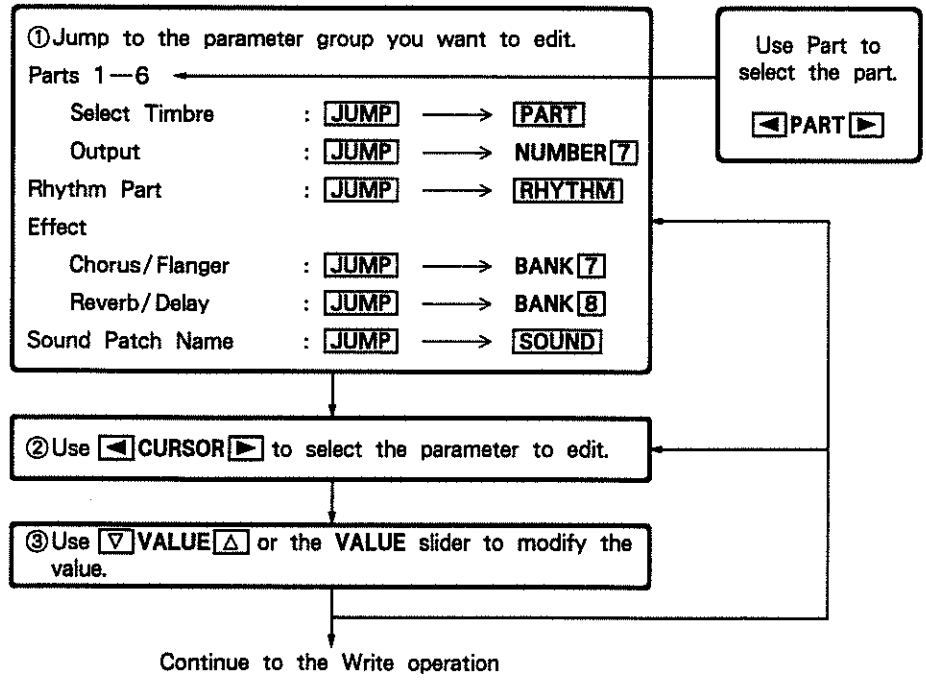
Here we will explain how to set the basic parameters of a Sound Patch.



For each Part 1—6, you can select a different Timbre and make settings for volume, pan, etc. For the Rhythm Part, you can specify which rhythm set is to be used. In addition, you can store effect settings (chorus, reverb) as part of a Sound Patch.

■ Basic Editing Procedure

While in Sound Patch mode or Link Play mode, select the Sound Patch you want to edit, and use the following procedure.



* Timbres for Parts 1—6 can also be selected in Part Play mode.
* The rhythm set for the Rhythm Part can also be selected in Rhythm Play mode.
* The jumps using the **BANK** and **NUMBER** buttons explained here apply to the factory settings.
* Edited settings are temporary. To store your edits, write them into a Sound Patch memory (☞page 57).

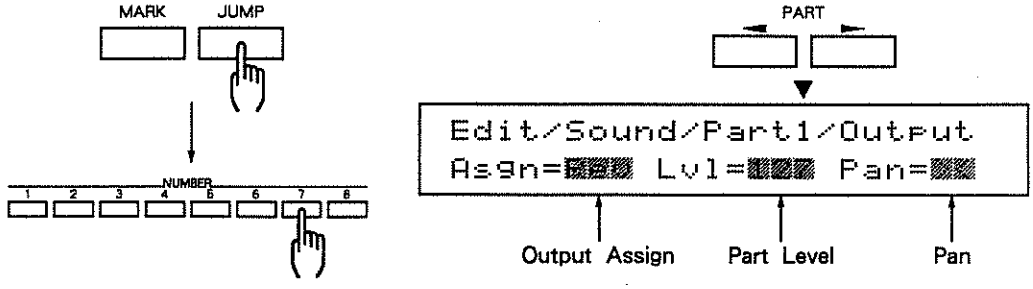
a. Settings for each Part (1—6)

For each Part, you can specify the Timbres to be used when the Sound Patch is selected, the effect to be used, and settings for pan and level.

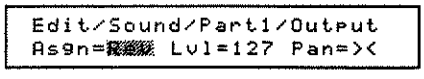
■ Timbre (A11—B88) This specifies the timbre which will be used for each Part when the Sound Patch is selected.

* Timbres can also be selected using [INT/A], [CARD/B], **BANK** [1]—[8], and **NUMBER** [1]—[8].

■ Output



●Output Assign (Dry, Rev, Cho, Dir)



This specifies the effect (chorus, reverb) to be used by each Part. As specified by the effect chorus out mode (☞page 53), effects can be connected in two ways, PreRev and PostRev. (The factory setting is PreRev.)

Output Mode	Effect	Output Jacks
Dry	No effect is used	MIX OUT
Rev	Only Reverb	
Cho	Pre Rev : Chorus and Reverb Post Rev : Only Chorus	
Dir	No effect is used	DIRECT OUT

* If the DIRECT OUT jacks are not being used, the signal from the DIRECT OUT jacks will be sent from the MIX OUT jacks.

●Part Level (0—127)

This determines the volume of each Part, allowing you to adjust the volume balance between Parts.

●Pan (7 >—><—< 7, Rnd)

This determines the pan position (stereo location) of each Part. When Rnd is selected, the sound will be moved to a random location each time it is played.

Left	Center	Right
7> ·····	><	····· <7

■Chorus and Reverb Effect Switch

In addition to the output assign specified for each Sound Patch, you may specify a whether the chorus or reverb effect is to be On or Off for all Sound Patches. (This setting is shared by all Sound Patches.)

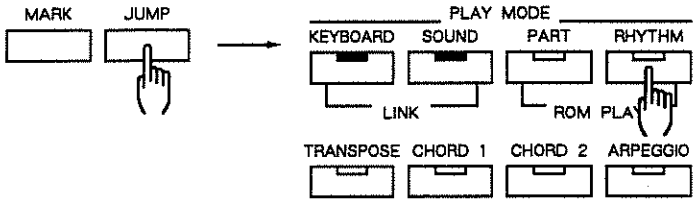
Select Setup → Select Effect

EDIT → ◀CURSOR → ENTER → ◀CURSOR▶ → ENTER

*The chorus/reverb effect switch setting is preserved even when a Patch is changed or the power is turned off.

b. Rhythm part settings

For the Rhythm Part, you can specify the rhythm set and the overall volume of the Rhythm Part. To modify the pan, output assign, sound, and volume settings of each rhythm sound, edit the Rhythm Set (☞"Rhythm Set Settings", page 69).



Button	Parameter	Display
CURSOR ◄	Rhythm Set	Edit/Sound/R.Part Rhythm=#▒:Standard Set►
↕	⋮	⋮
CURSOR ►	Rhythm Part Level Level Boost Switch	Edit/Sound/R.Part ◄ Level=▒▒▒ Boost=▒▒▒

●Select Rhythm Set (1—4)

```
Edit/Sound/R.Part
 Rhythm=#▒:Standard Set►
```

Select one of the four rhythm sets.

●Rhythm Part Level (0—127)

```
Edit/Sound/R.Part
◄ Level=▒▒▒ Boost=Off ►
```

This determines the overall volume of the Rhythm Part.

●Level Boost Switch (Off, On)

```
Edit/Sound/R.Part
◄ Level=127 Boost=▒▒▒ ►
```

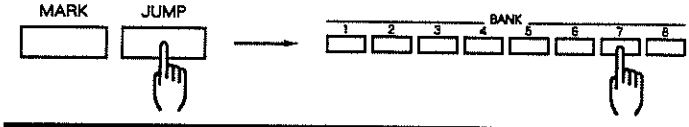
When set to On, the value will be greater than the specified value.

c. Effect settings

Make settings for the chorus and reverb effects.

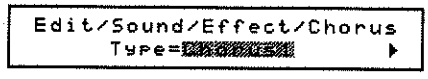
■ Chorus/Flanger

Chorus adds spaciousness and warmth to the sound. These settings determine how chorus and reverb are connected, and how the Chorus/Flanger effect is applied.



Button	Parameter	Display
CURSOR ◄	Chorus/Flanger Type	Edit/Sound/Effect/Chorus Type=[illegible] ►
	Output Mode Chorus/Flanger Level	Edit/Sound/Effect/Chorus ◄Out=[illegible] Level=[illegible]►
	Delay Time Chorus/Flanger Rate	Edit/Sound/Effect/Chorus ◄Delay Time=[illegible] Rate=[illegible]►
CURSOR ►	Chorus/Flanger Depth Feedback	Edit/Sound/Effect/Chorus ◄ Depth=[illegible] Feedback=[illegible]

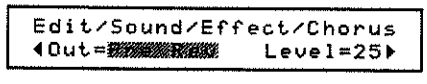
●Chorus/Flanger type (Chorus1, 2, FB-Chorus, Flanger, Short Delay)



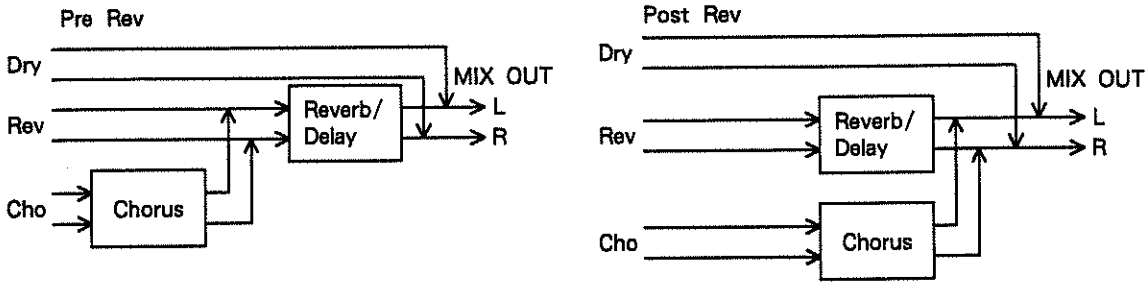
This selects the effects such as chorus, flanger, and short delay.

Chorus 1	Rich spacious effect.
Chorus 2	Deep ensemble effect, especially effective for layered strings.
FB-Chorus	An effect midway between chorus and flanger.
Flanger	An effect of strongly emphasized shifting overtones, especially effective on sounds with a strong overtone structure such as HEAVY.EG.
Short Delay	A delay repeated in a short time.

●Output Mode (Pre Rev, Post Rev)



This determines how chorus and reverb are connected. The output assign setting for each Part (☞page 50) will determine which effect is used.



●Chorus/Flanger Level (0—31)

```
Edit/Sound/Effect/Chorus
◀Out=Pre Rev    Level=▓▓▶
```

This determines the volume of the effect, allowing you to adjust the balance of the processed and unprocessed sound.

●Delay Time (0—31)

```
Edit/Sound/Effect/Chorus
◀Delay Time=▓▓  Rate=25▶
```

This adjusts the delay time used by the chorus/flanger.
For Chorus 1, 2 and FB-Chorus, higher settings will result in a more spacious effect.
For Flanger, lower settings will result in a stronger flanging effect, and higher settings will result in a more chorus-like effect.
For Short Delay, this adjusts the time delay between repeats.

●Chorus/Flanger Rate (0—31)

```
Edit/Sound/Effect/Chorus
◀Delay Time=12  Rate=▓▓▶
```

This adjusts the cycle time of the chorus/flanger. It has no effect when Short Delay is selected.

↑ 31 Fastest cycle
↓ 0 Modulation becomes slower

●Chorus/Flanger Depth (0—31)

```
Edit/Sound/Effect/Chorus
◀ Depth=▓   Feedback=±0
```

This adjusts the depth of the chorus or flanger effect. It has no effect when Short Delay is selected.

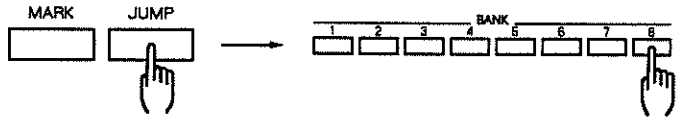
●Feedback (−31—+31)

```
Edit/Sound/Effect/Chorus
◀ Depth=0   Feedback=▓▓
```

This adjusts the amount of feedback for the flanger or delay. The phase will be reversed depending on the "+" or "−" setting, which will also change the resulting sound. For Flanger and FB-Chorus, this will modify the tonal quality of the sound. For Short Delay, this will determine the number of repeats. For Chorus 1, 2, this setting has no effect.

■ Reverb/Delay

Reverb or delay adds acoustic reflections that give depth and spaciousness to the sound.



Button	Parameter	Display
CURSOR ◄ / ↕ / CURSOR ►	Reverb/Delay Type Reverb/Delay Time	Edit/Sound/Effect/Reverb Type=[illegible] Time=0 ►
	Reverb/Delay Level Feedback (Delay only)	Edit/Sound/Effect/Reverb ◄Level=[illegible] Delay FB=[illegible]

●Reverb/Delay Type (Room 1—3, Hall 1, 2, Gate, Delay, Cross Delay)

Select the type of reverb or delay.

Room 1—3	Sharply-defined reverb with a broad spread
Hall 1, 2	Smooth reverb, with greater depth than Room
Gate	A sharply muted reverb ; i.e., "gated" to produce an artificially fast decay
Delay	Standard delay effect
Cross Delay	Delay repeats pan to left and right

●Reverb/Delay Time (0—31)

This determines the length of the reverberant sound. When Delay or Cross Delay is selected, this determines the delay time.

●Reverb/Delay Level (0—31)

This determines the volume of the reverb (delay).

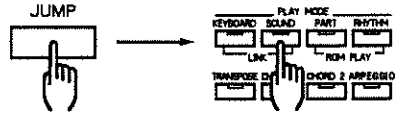
●Feedback (0—31)

This determines the number of times the delay is repeated. It is meaningful only when Delay or Cross Delay is selected.

d. Name

You can give a 12-character name to each Sound Patch.

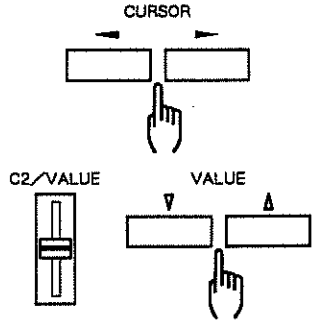
Get the Sound Patch name display.



```
Edit/Sound/Name
 Patch Name=Acoust Piano
```

Move the cursor (underline) to the character you want to change, and select a new character.

* The following characters can be used ;
  (space) A—Z a—z 0—9 − / + * . , : ; = ! " # $ % & ' ( ) < > { } [ ] _ ? ♪
* Pressing **NUMBER 1** will insert a space. Pressing **NUMBER 2** will delete the character at the cursor, and move the remaining characters forward.



```
Edit/Sound/Name
 Patch Name=*************
```

```
Edit/Sound/Name
 Patch Name=A************
```

2. Storing a Sound Patch (Writing Procedure)

The various Sound Patch settings you edit are stored together as a Sound Patch. Here we will explain how to write the edited Sound Patch settings into the Sound Patch memory they originally occupied.

* To write a Sound Patch into a different Sound Patch memory, refer to "Writing a Patch" (☞page 133).

From the Sound Patch editing display, jump to the Sound Patch write display.

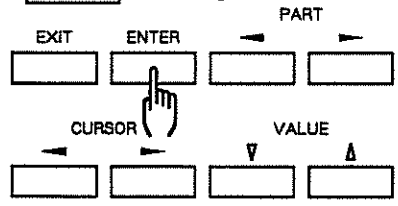
①②

```
Data/Write/Sound
Writing...        Temp:I11 →I11
```

* The display will show the numbers of the edited Sound Patch and the writing destination Sound Patch.

Press [ENTER] once again.

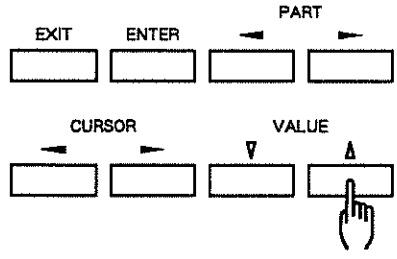
③



```
Data/Write/Sound
Sure?  [VALUE▲] / [EXIT]
```

If you are sure you want to write the data into the Sound Patch memory, press VALUE [△]. (To cancel the operation, press [EXIT] to return to the display of step ②.)

④



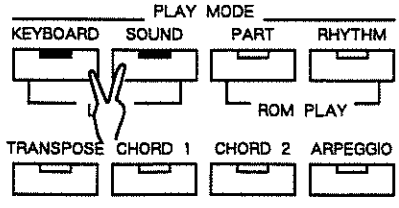
```
Data/Write/Sound
   Function Complete.
```

↓ and in a short time,

```
Data/Write/Sound
Writing...        Temp:I11 →I11
```

This completes the writing operation. Return to play mode.

⑤



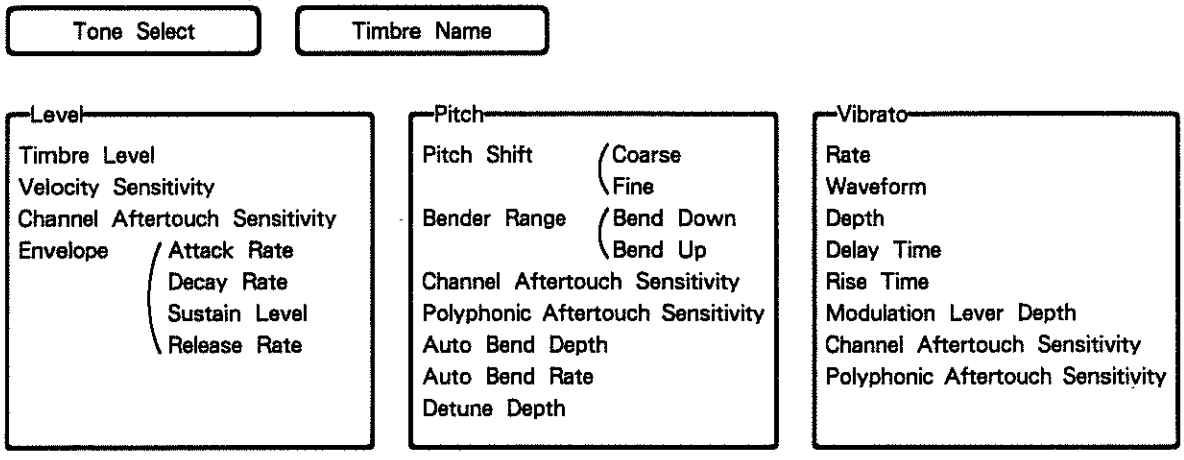
```
I-11 #001 :Standard
I-11 #001 :Acoust Piano
```

3 EDIT THE TIMBRE SETTINGS

Here we will edit Timbre settings to create a new sound.

1. Timbre Editing

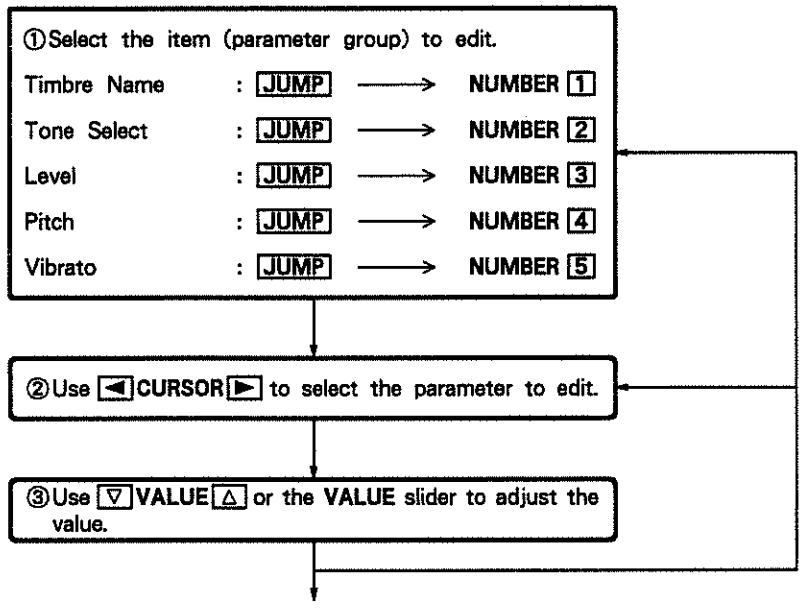
Here we will explain how the Timbre parameters function, and the editing procedure.



* Polyphonic aftertouch refers to aftertouch which can be controlled independently by each key. Make these settings when controlling the U-20 from a MIDI device which is able to transmit polyphonic aftertouch data. The U-20 is not able to transmit polyphonic aftertouch data.

■ Basic Editing Procedure

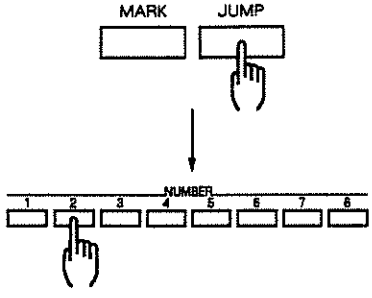
Since you will want to listen to the Timbre while editing it, first enter Part Play mode and select the Timbre to be edited. You can select a Timbre for any Part, but in this example select Part 1.

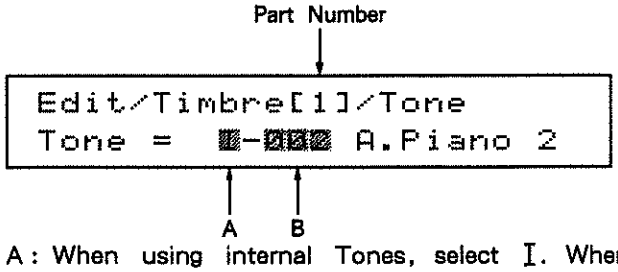


* This chart shows the factory-set jump destinations.
* Edited settings are temporary. If you want to keep your edits, you must write them into memory (☞page 68).

a. Tone select

Select the basic Tone for the Timbre. You can select from the 128 internal Tones, or from Tones in a separately sold PCM card.





A : When using internal Tones, select I. When using Tones from a PCM card (optional), select the card number.

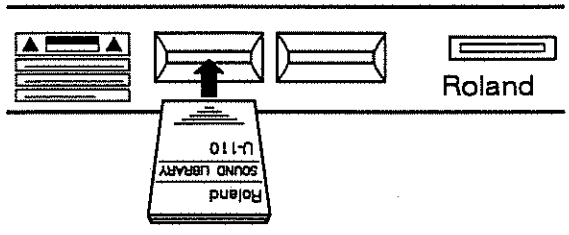
B : Specify the number of the Tone (1—128) you want to use.

Tones can be divided into the following types. Refer to the Tone Chart to see the type of each Tone.

Tone Type	Number of Voices	
Single	1	A Tone consisting of a single sound
Velocity Switch	1	A Tone which switches between two sounds according to on the key velocity
Dual	2	A Tone consisting of two different sounds
Detune	2	A Tone consisting of two sounds of different pitch
Velocity mix	2	A Tone which mixes two sounds according to the key velocity

■Using a Separately Sold PCM Card (SN-U110 Series)

Each card is numbered by type, 01, 02, ··· Check the number of the card, and insert it firmly into the rear panel PCM CARD slot. You may insert a card into either the right or left slot. Up to two types of card can be used at once.



Use Tone Select to select the number of the inserted card, and the number of the Tone you want to use. Each card will have a different number of Tones.
When a PCM card is inserted or removed, operation will briefly stop while the following display appears. This is not a malfunction, and operation will resume in a short time.

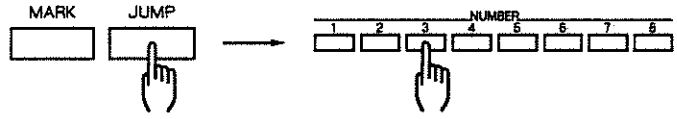
```
Checking PCM Card...
```

While playing, the PCM card being used should be left inserted.
If you have selected a card Tone but have not inserted the specified card, the following display will appear, and there will be no sound.

```
Edit/Timbre[1]/Tone
Tone = 01-003  No Card!
```

b. Level

These settings determine the volume of the Timbre, and how the volume is controlled.



Button	Parameter	Display
CURSOR ◄	Timbre Level Velocity Sensitivity	Edit/Timbre[1]/Level Level=▒▒▒ Velo Sens=▒▒ ►
	Channel Aftertouch Sensitivity	Edit/Timbre[1]/Level ◄ Ch After Sens=▒▒ ►
CURSOR ►	Env Attack Rate Env Decay Rate Env Sustain Level Env Release Rate	Edit/Timbre[1]/Level ◄Env A=▒▒ D=▒▒ S=▒▒ R=▒▒

●Timbre Level (0—127)

```
Edit/Timbre[1]/Level
Level=▒▒▒ Velo Sens=+7 ►
```

This adjusts the volume of the Timbre.

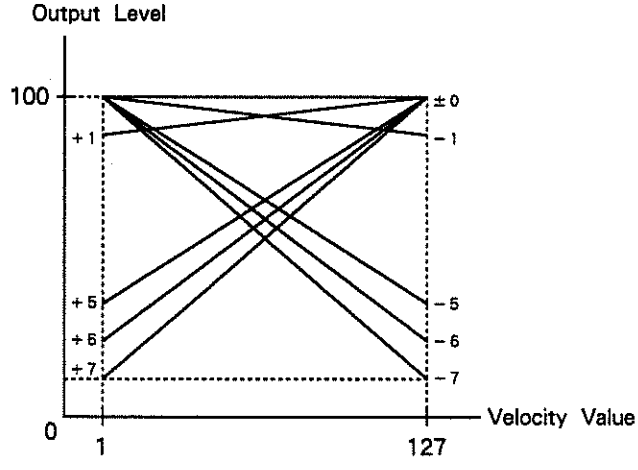
●Velocity Sensitivity (−7—+7)

```
Edit/Timbre[1]/Level
Level=127 Velo Sens=▒▒ ►
```

This determines how velocity will affect volume.

↑ +7 Strongly played notes will be louder
| ±0 Velocity will not affect volume
↓ −7 Strongly played notes will be softer

Volume change when Level = 100

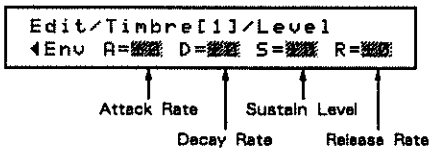


●Channel Aftertouch Sensitivity (−7—+7)

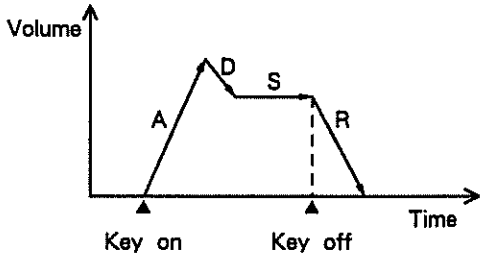
This determines how channel aftertouch will affect volume.

↑	+7	Stronger aftertouch will increase the volume
	±0	Aftertouch will not affect volume
↓	−7	Stronger aftertouch will decrease the volume

●Envelope (Env)



Each parameter determines how the volume will change over time.



A : Attack Rate (−7—+7) the rate at which the sound begins
D : Decay Rate (−7—+7) the rate at which the sustain level is reached
S : Sustain Level (−7—+7) the volume level at which the sound is sustained
R : Release Rate (−7—+7) the rate at which the volume disappears

Attack Rate, Decay Rate, Release Rate

↑	+7	Changes more rapidly
↓	−7	Changes more slowly

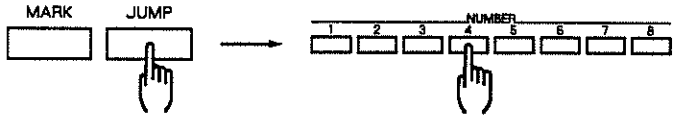
Sustain Level

↑	+7	Increased volume
↓	−7	Decreased volume

* These envelope settings have a relative effect on the envelope settings of the Tone itself ; i.e., they "modify" the standard settings of the envelope generator. Unlike the envelopes found on synthesizers, they are not "absolute" settings. Depending on the selected Tone, identical settings of these values may have different results.

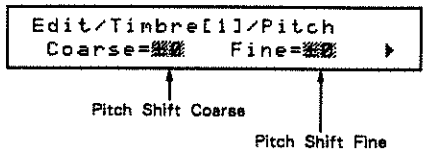
c. Pitch

These settings determine the basic pitch, and how the pitch is controlled.



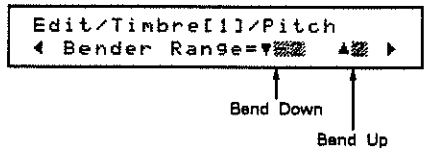
Button	Parameter	Display
CURSOR ◄	Pitch Shift Coarse Pitch Shift Fine	Edit/Timbre[1]/Pitch Coarse=▒▒ Fine=▒▒ ►
	Bender Range (Bend Down) Bender Range (Bend Up)	Edit/Timbre[1]/Pitch ◄ Bender Range=▼▒▒ ▲▒ ►
	Channel Aftertouch Sensitivity	Edit/Timbre[1]/Pitch ◄ Ch After Sens=▒▒ ►
	Polyphonic Aftertouch Sensitivity	Edit/Timbre[1]/Pitch ◄ Poly After Sens=▒▒ ►
	Auto Bend Depth	Edit/Timbre[1]/Pitch ◄ Auto Bend Depth=▒▒ ►
	Auto Bend Rate	Edit/Timbre[1]/Pitch ◄ Auto Bend Rate=▒▒ ►
CURSOR ►	Detune Depth	Edit/Timbre[1]/Pitch ◄ Detune Depth=▒

●Pitch Shift



This shifts the basic pitch of the Tone.
Pitch shift coarse (−24—+24):
semitone steps (±2 octaves)
Pitch shift fine (−50—+50):
units of 1 cent (±50 cents)

●Bender Range



This determines the range of the change in pitch when the bender lever is moved left (bend down) or right (bend up).
Bend down (−36, −24, −12—0):
−3, −2 octaves, semitone steps (−1—0 octaves)
Bend up (0—12) : semitone steps (0—1 octave)

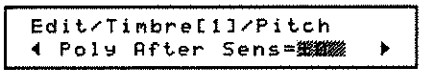
●Channel Aftertouch Sensitivity (−36, −24, −12—+12)

This determines how channel aftertouch will affect the pitch.

In units of −3, −2 octave, semitone steps (−1—+1 octave).

↑ +12 Stronger aftertouch will raise the pitch
| ±0 Aftertouch will not affect pitch
↓ −36 Stronger aftertouch will lower the pitch

●Polyphonic Aftertouch Sensitivity (−36, −24, −12—+12)



This determined how polyphonic aftertouch will affect the pitch.

In units of −3, −2 octave, semitone steps (−1—+1 octave).

* Polyphonic aftertouch can be received, but cannot be transmitted by the U-20.

●Auto Bend

Auto Bend Depth

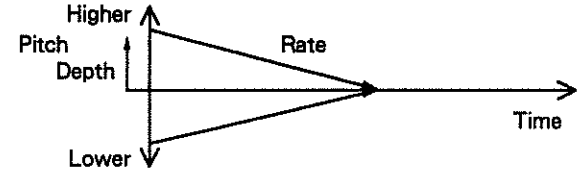
Auto Bend Rate

Auto bend is an effect which causes an automatic pitch-bend each time a note is played.

Depth (−36, −24, −12—+12): Amount of pitch change
−3, −2 octave, semitone steps (−1—+1 octaves)

Rate (0—15): Rate of pitch change

↑ 15 Rapid change in pitch
↓ 0 Slow change in pitch

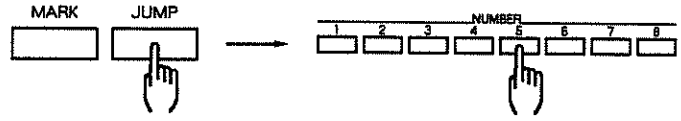


●Detune Depth (0—15)

This determines how detune-type Tones are detuned. This parameter is meaningful only when a detune-type Tone is selected.

d. Vibrato

These settings determine how vibrato (repetitive change in pitch) is applied and controlled.



Button	Parameter	Display
CURSOR ◄	Rate Waveform	Edit/Timbre[1]/Vibrato Rate=▒▒ Waveform=▒▒▒ ▶
	Depth Delay Time	Edit/Timbre[1]/Vibrato ◀Depth=▒ Delay Time=▒ ▶
	Rise Time	Edit/Timbre[1]/Vibrato ◀ Rise Time=▒ ▶
	Modulation Lever Depth	Edit/Timbre[1]/Vibrato ◀ Modulation Depth=▒ ▶
	Channel Aftertouch Sensitivity	Edit/Timbre[1]/Vibrato ◀ Ch After Sens=▒ ▶
CURSOR ►	Polyphonic Aftertouch Sensitivity	Edit/Timbre[1]/Vibrato ◀ Poly After Sens=▒

●Rate (0—63)

```
Edit/Timbre[1]/Vibrato
Rate=▒▒ Waveform=Tri  ▶
```

This determines the speed of the vibrato.

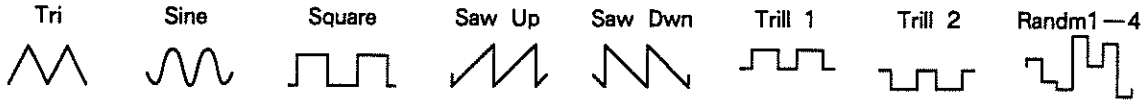
↑ 63 Fast vibrato

↓ 0 Modulation becomes slower

●Waveform (Tri, Sine, Square, SawUp, SawDwn, Trill 1, 2, Randm 1—4)

```
Edit/Timbre[1]/Vibrato
Rate=50 Waveform=▒▒▒  ▶
```

This selects the waveform of the vibrato LFO.



Random Waveform

●Depth (0—15)

```
Edit/Timbre[1]/Vibrato
◀Depth=▓  Delay Time=0 ▶
```

This determines the depth of the vibrato.

●Delay Time (0—15)

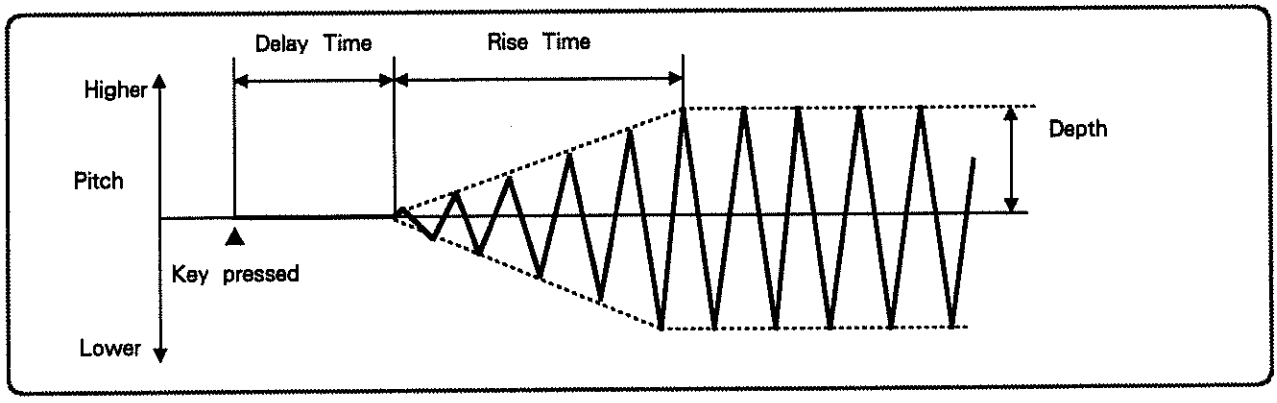
```
Edit/Timbre[1]/Vibrato
◀Depth=0  Delay Time=▓ ▶
```

This determines the time delay from when the sound is played to when the vibrato begins.

●Rise Time (0—15)

```
Edit/Timbre[1]/Vibrato
◀      Rise Time=▓      ▶
```

This determines the time from when the vibrato begins to when the vibrato depth reaches the specified value.



●Modulation Lever Depth (0—15)

```
Edit/Timbre[1]/Vibrato
◀ Modulation Depth=▓ ▶
```

This determines how greatly the bender / modulation lever will affect the vibrato depth.

●Channel Aftertouch Sensitivity (0—15)

```
Edit/Timbre[1]/Vibrato
◀  Ch After Sens=▓   ▶
```

This determines how channel aftertouch will control the amount of vibrato.

●Polyphonic Aftertouch Sensitivity (0—15)

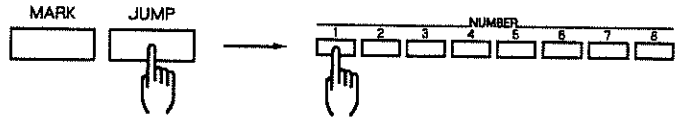
```
Edit/Timbre[1]/Vibrato
◀ Poly After Sens=▓
```

This determines how polyphonic aftertouch will control the amount of vibrato.

* Polyphonic aftertouch can be received, but cannot be transmitted by the U-20.

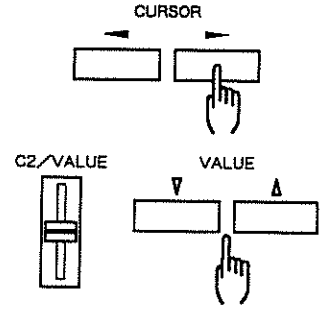
e. Timbre name

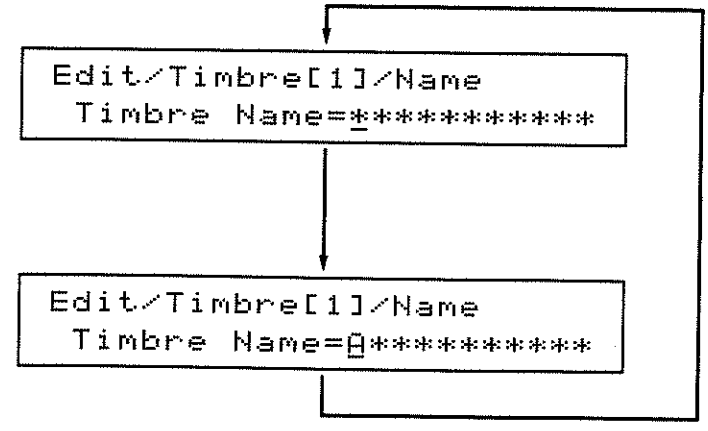
You can give each Timbre a 12-character name.



Move the cursor (underline) to the character you want to change, and select a character.

* The following characters can be used ;
  (space) A—Z a—z 0—9 − ／ + * . , : ; = ! " # $ % & '
  ( ) < > { } [ ] _ ? ♪
* Pressing **NUMBER** 1 will insert a space. Pressing **NUMBER** 2 will delete the character at the cursor, and move the remaining characters forward.





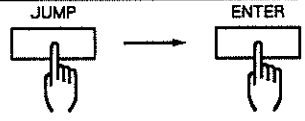
2. Storing Timbres (Write Procedure)

The various Timbre settings you edit are stored together as a Timbre. Here we will explain how to write the edited Timbre settings into the Timbre memory they originally occupied.

* To write a Timbre into a different Timbre memory, refer to "Writing a Timbre" (☞page 136).

From the Timbre editing display, jump to the Timbre write display.

①②

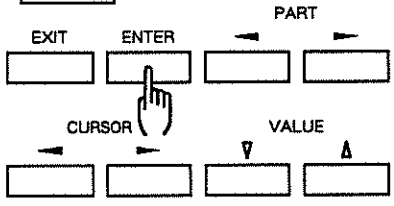


```
Data/Write/Timbre[1]
[MEMO]          Temp:IA11→IA11
```

* The display will show the numbers of the edited Timbre and the writing destination Timbre.

Press [ENTER] once again.

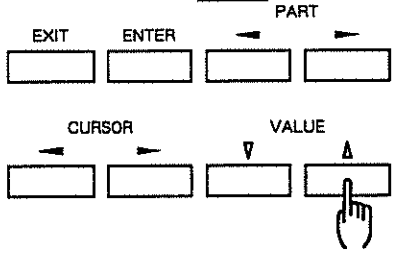
③



```
Data/Write/Timbre[1]
Sure?  [VALUE▲] / [EXIT]
```

If you are sure you want to write the data into the Timbre memory, press VALUE[△]. (To cancel the operation, press [EXIT] to return to the step ② display.)

④



```
Data/Write/Timbre[1]
   Function Complete.
```

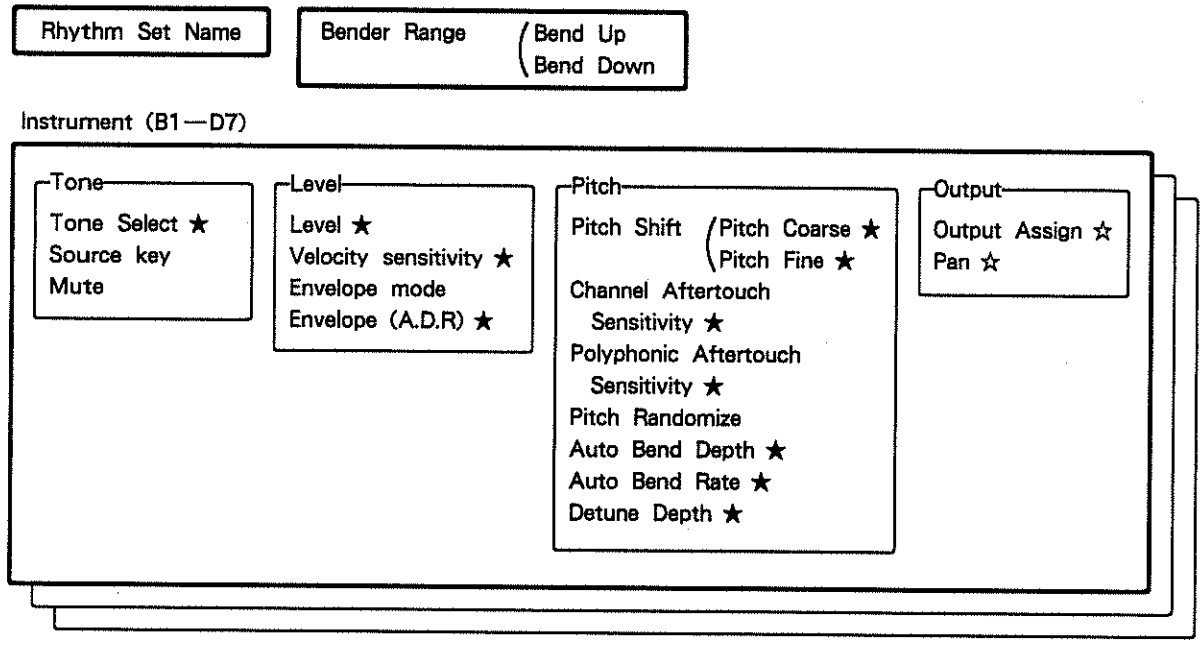
↓ and in a short time,

```
Data/Write/Timbre[1]
[MEMO]          Temp:IA11→IA11
```

This completes the writing operation. Return to play mode.

4 RHYTHM SET SETTINGS

The U-20's Rhythm Part can use one of the four Rhythm Sets you create. Here we will explain how to create a Rhythm Set.
In a Rhythm Set, you can assign any desired Tone to each key. Usually you will use the drum Tone (I-128) of the internal memory, but you are free to use any other internal Tones, or Tones from a PCM card (optional). You can also edit the sound for each key, in the same way as for Timbres.



★ : Functions in the same way as with Timbre parameters.

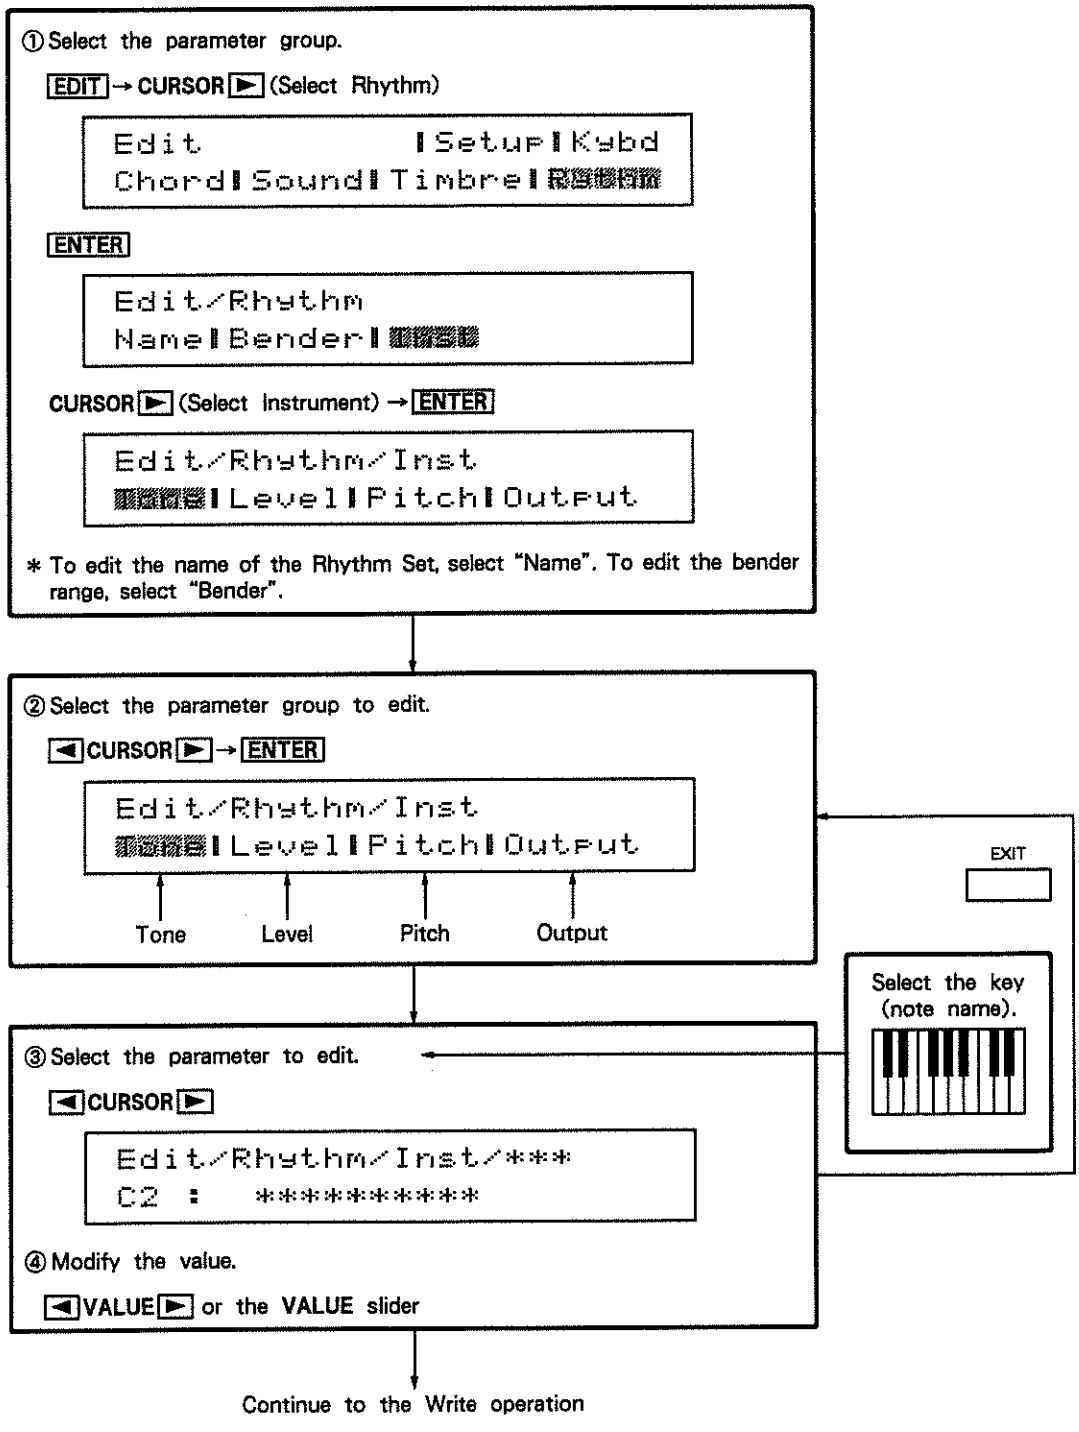
☆ : Functions in the same way as for Part 1—6 parameters.

1. Settings for Each Key

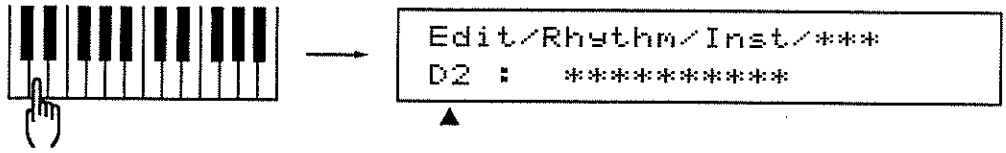
Here's how to edit the sound for each key B1—D7.

■ Basic Editing Procedure

Before you begin editing, select Rhythm Play mode and use the following procedure so that you will be able to hear the sound of each key while you edit.



●Use the keyboard to select the key to edit



* To select the B1, C#7 or D7 keys, you must first use key transpose to move the keyboard range.
* Edited settings are temporary. If you want to store your edits, you must use the Rhythm Set writing procedure (☞page 79).

a. Selecting tones

Here's how to select a Tone to assign to the Rhythm Set.

Select a parameter from the tone parameter group.

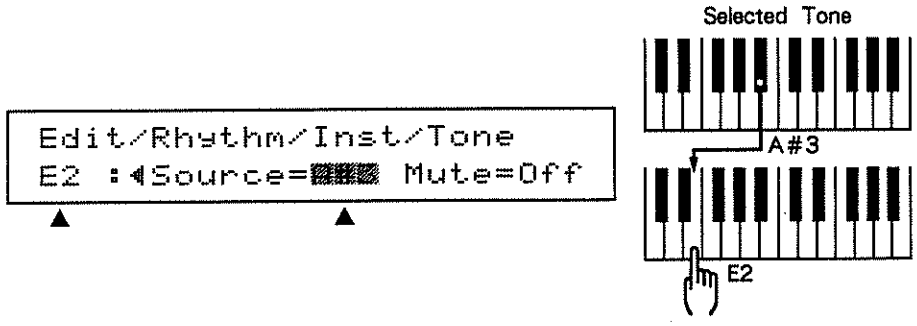
Button	Parameter	Display
CURSOR ◄	Tone Select	Edit/Rhythm/Inst/Tone C2 : ■-■■■ DRUMS ▶ A B
CURSOR ►	Source Key Mute	Edit/Rhythm/Inst/Tone C2 :◀Source=■■ Mute=■■■

●Tone Select

Select the Tone that each key will sound. You may also select a Tone other than the drum Tone (I-128).

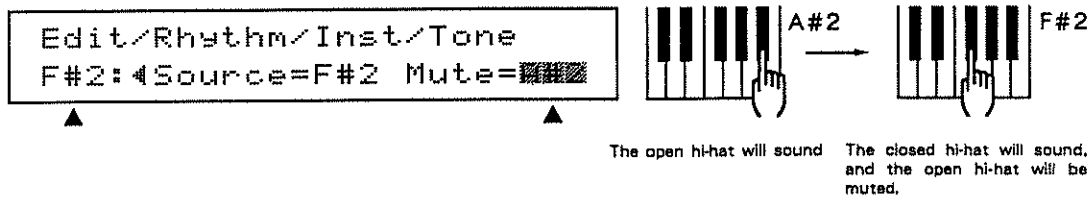
A : When using internal Tones, select I.
When using PCM card Tones, select the card number (1, 2, ···).
B : Select the Tone number (1—128).

●Source Key (B1—D7) Determine which key of the selected Tone will be used.
Example : Assign the sound of the A # 3 key of the selected Tone to the E2 key of the Rhythm Set.



* The chart on page 167 shows the rhythm sound played by each key of the drums Tone (I-128).

●Mute (Off, B1—D7) This allows you to mute the sound of a selected key ··· especially useful for hi-hat or cymbal.
Example : Sound the closed hi-hat (F # 2 key) and mute the open hi-hat (A # 2 key).



b. Level

Set the volume of each key, and determine how the volume will change.

Select a parameter from the level parameter group.

Button	Parameter	Display
CURSOR ◄	Level Velocity Sensitivity	Edit/Rhythm/Inst/Level C2 :Level= V.Sens=▶
	Envelope Mode	Edit/Rhythm/Inst/Level C2 :◀Env Mode=▶
CURSOR ►	Env Attack Rate Env Decay Rate Env Release Rate	Edit/Rhythm/Inst/Level C2 :◀Env A= D= R=

●Level (0—31)

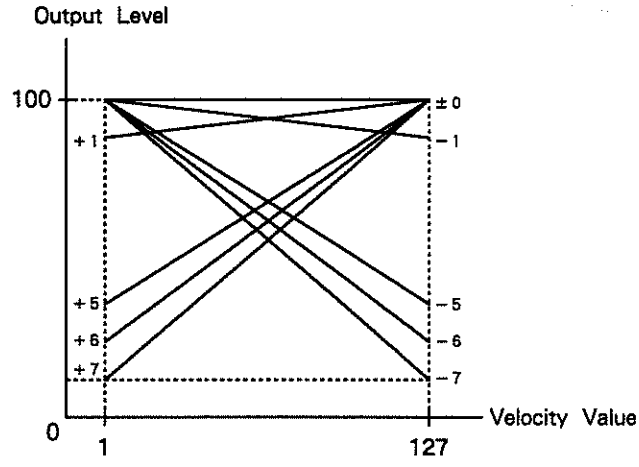
This adjusts the volume of each key, allowing you to balance the volumes of the rhythm sounds.

●Velocity Sensitivity (−7—+7)

This determines how velocity will affect the volume.

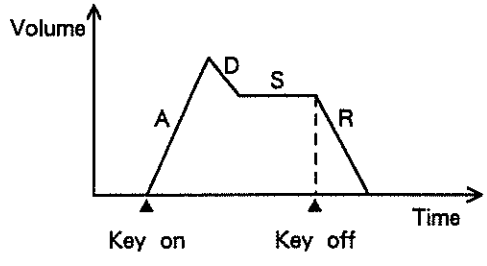
↑ +7 Strongly played notes will be louder
± 0 Velocity will not affect volume
↓ −7 Strongly played notes will be softer

Volume change when Level = 100

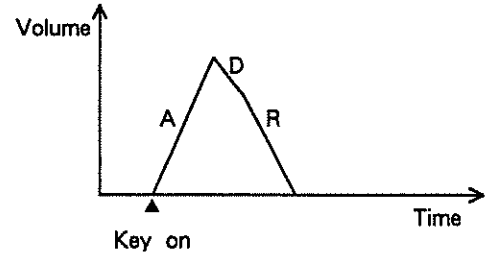


●Envelope Mode (Sustain, NoSustain)

Sustain : receive note off messages



NoSustain : ignore note off messages



When using a sequencer or rhythm machine to play the U-20's rhythm sounds, be sure to select NoSustain.

●Envelope

These settings make adjustments to the change in volume over time (the envelope).

A : Attack Rate (−7—+7)
D : Decay Rate (−7—+7)
R : Release Rate (−7—+7)

↑ +7 Faster change
↓ −7 Slower change

* These settings are relative to the envelope settings of the Tone. The same settings will have different results when used on different Tones.

c. Pitch

These settings determine the pitch of each key, and how the pitch will change.

Select a parameter from the pitch parameter group.

Button	Parameter	Display
CURSOR ◄	Pitch Shift Coarse Pitch Shift Fine	Edit/Rhythm/Inst/Pitch C2 :Course=▒▒ Fine=▒▒ ▶
	Channel Aftertouch Sensitivity	Edit/Rhythm/Inst/Pitch C2 :◀Ch After Sens=▒▒ ▶
	Polyphonic Aftertouch Sensitivity	Edit/Rhythm/Inst/Pitch C2 :◀Poly Aft Sens=▒▒ ▶
	Pitch Randomize	Edit/Rhythm/Inst/Pitch C2 :◀Pitch Randomize=▒ ▶
	Auto Bend Depth	Edit/Rhythm/Inst/Pitch C2 :◀Auto Bend Dpth=▒▒ ▶
	Auto Bend Rate	Edit/Rhythm/Inst/Pitch C2 :◀Auto Bend Rate=▒ ▶
CURSOR ►	Detune Depth	Edit/Rhythm/Inst/Pitch C2 :◀ Detune Depth=▒

●Pitch Shift

This adjusts the pitch.

Pitch Shift Coarse (−36, −24, −12—+12):
−3, −2, −1—+1 octave (in semitone steps)

Pitch Shift Fine (−50—+50): in steps of 1 cent

●Channel Aftertouch Sensitivity (−36, −24, −12—+12)

This determines how channel aftertouch will affect the pitch.

↑ +12	Stronger aftertouch will raise the pitch
± 0	Aftertouch will not affect the pitch
↓ −36	Stronger aftertouch will lower the pitch

●Polyphonic Aftertouch Sensitivity (−36, −24, −12—+12)

This determines how polyphonic aftertouch will affect the pitch.

* The U-20 can receive, but not transmit polyphonic aftertouch control data.

●Pitch Randomize (0—15)

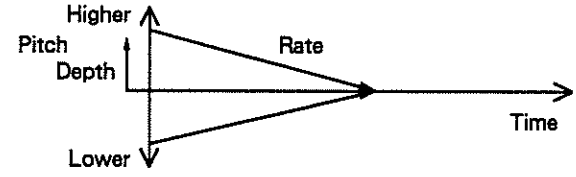
This randomly varies the pitch each time the note is played.

↑ 15 Much random pitch change

↓ 0 No random pitch change

●Auto Bend

This effect adds an automatic pitch bend each time the note is played.



Depth (−36, −24, −12—+12):
amount of pitch change (−3, −2, −1—+1 octave)
Rate (0—15): speed of pitch change

↑ 15 Rapid pitch change

↓ 0 Slow pitch change

●Detune Depth (0—15)

This determines how detune-type Tones will be detuned. This setting is effective only when detune-type Tones are selected. (☞Refer to page 166, "Preset Tone List".)

d. Output

For each key, you can make pan settings and determine whether to use an effect.

Select a parameter from the output parameter group.

Button	Parameter	Display
CURSOR ◄ / CURSOR ►	Output Assign Pan	Edit/Rhythm/Inst/Output C2 :Assign=▓▓▓ Pan=▓▓

●Output Assign (Dry, Rev, Cho, Dir)

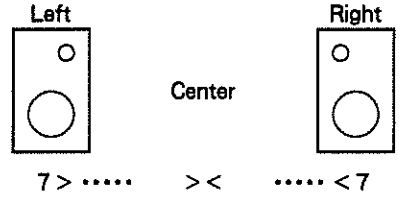
Select the effect to use for each key. For the chorus effect, the result will depend on the chorus out mode (sound patch) setting (☞page 53).

Output Mode	Effect	Output Jacks
Dry	No effect is used	MIX OUT
Rev	Only Reverb	
Cho	Pre Rev : Chorus and Reverb Post Rev : Only Chorus	
Dir	No effect is used	DIRECT OUT

* If nothing is plugged in to the DIRECT OUT jacks, the signal from the DIRECT OUT jacks will be output from the MIX OUT jacks.

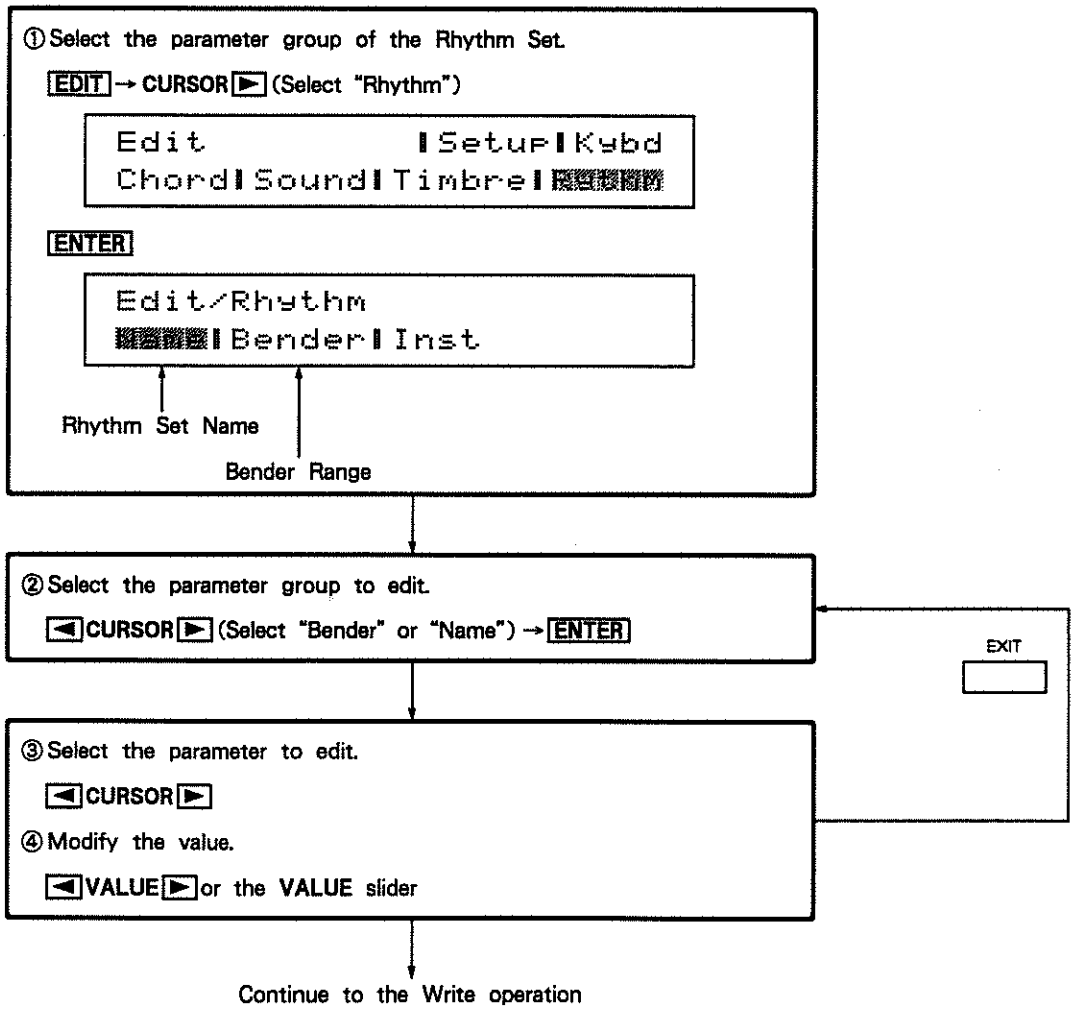
●Pan (7>—><—<7, Rnd)

This determines the pan setting (stereo placement). When Rnd is selected, the stereo position will randomly change each time the sound is played.



2. Other Settings

In addition to the various settings for each key, you can set the bender range, and give a name to the Rhythm Set.



■ Bender Range

```
Edit/Rhythm/Bender
  Bender Range=▼▒▒▒ ▲12
```

This determines the amount of pitch change that occurs when you bend down (move the lever to the left) or bend up (move the lever to the right).

Bend down (−36, −24, −12—±0): −3, −2, −1—0 octaves
Bend up (0—12): in semitone steps (0—1 octave)

■ Rhythm Set Name

```
Edit/Rhythm/Name
Rhythm Name=Standard Set
```

You can give each Rhythm Set a 12-character name. Move the cursor (underline) to the character you want to modify, and select a new character.

* Selectable characters :
  (space) A—Z a—z 0—9 − / + * . , : ; = ! " # $ % & '
  ( ) < > { } [ ] _ ? ♪
* Pressing **NUMBER** [1] will insert a space. Pressing **NUMBER** [2] will delete the character at the cursor, and move the remaining characters forward.

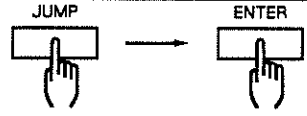
3. Storing a Rhythm Set (Writing Procedure)

Here we will explain how to store an edited Rhythm Set back into the memory number it originally occupied.

* If you want to store it into a different memory, refer to "Writing Chord Sets/Rhythm Sets" (☞page 139).

From the Rhythm Set editing display, jump to the Rhythm Set writing display.

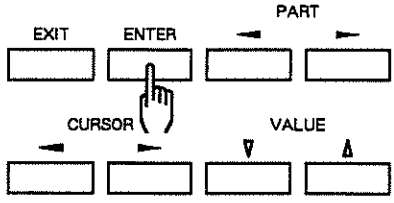
①②



```
Data/Write/Rhythm
                    Temp:I1 →I1
```

* The display will show the number of the edited Rhythm Set, and the number of the Rhythm Set into which the data will be written.

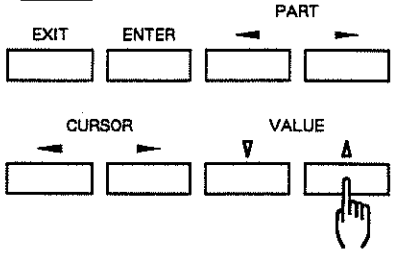
③



```
Data/Write/Rhythm
Sure?  [VALUE▲] / [EXIT]
```

If you are sure you want to store the data into memory, press VALUE[△]. (To quit without writing, press [EXIT].)

④



```
Data/Write/Rhythm
   Function Complete.
```

This completes the writing operation. Return to play mode.

MEMO

SECTION III

SYSTEM SETUPS

– Using the U-20 with MIDI –

Connections between the U-20's internal sound generator and keyboard follow the same concepts as MIDI. The explanations in this section will help you make effective use of the U-20 when using it as part of a MIDI system, and also when using the U-20 by itself.

1 ABOUT MIDI

Here we will explain the MIDI concepts that you will need to understand when using the U-20. Please be sure to read this explanation before using MIDI.

MIDI (Musical Instrument Digital Interface) is a world-wide standard for sending and receiving musical data such as notes and controller movements. If a device has MIDI, it can be connected to any other MIDI device (even of a different type or manufacturer) to exchange musical data.

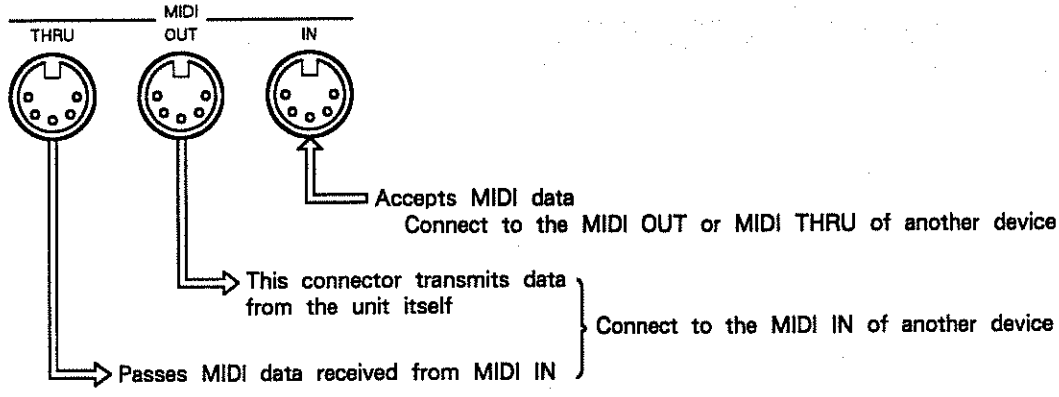
MIDI transmits various types of musical data ; for example, data indicating that a key has been pressed/released, or that a controller has been moved, etc. When you play a MIDI-equipped instrument, it transmits MIDI data to indicate the notes that are being played. Another MIDI device that receives this data will produce sound just as though it were the instrument being played.

1. How MIDI Data is Transmitted and Received

Here is how MIDI data is transmitted and received.

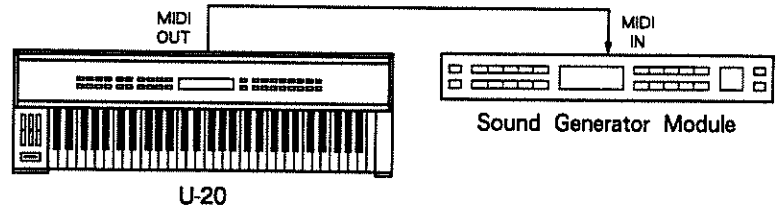
a. Connections

MIDI-equipped devices usually have three connectors ; IN, OUT, and THRU. Use a MIDI cable to connect these connectors to other devices as needed.



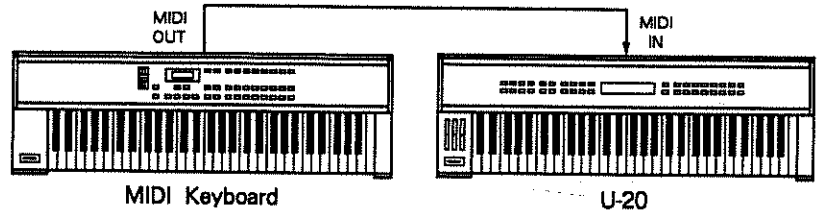
●Using the U-20 to control external sound generators

When using the U-20 to control other sound generator modules or synthesizers, make connections as follows.



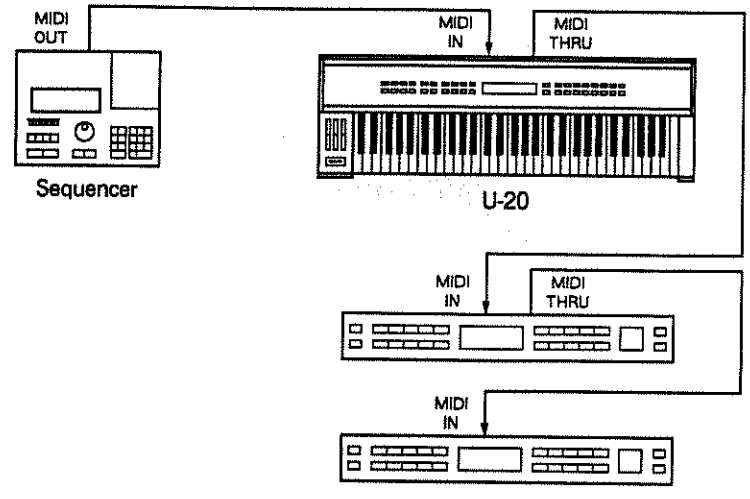
●Controlling the U-20 from external devices

When using an external sequencer or MIDI keyboard to control the U-20, make connections as follows.



●Using MIDI THRU

By using MIDI THRU, you can connect two or more devices.

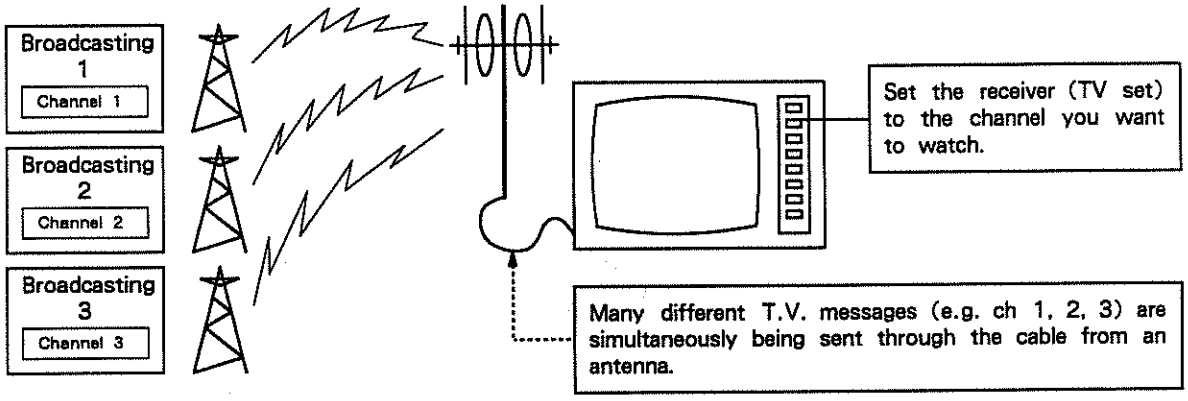


* It is theoretically possible to use MIDI THRU to connect as many devices as you like, but in practice, four or five units is the limit. Running a MIDI signal through six or more THRUs can result in garbled data transmit.

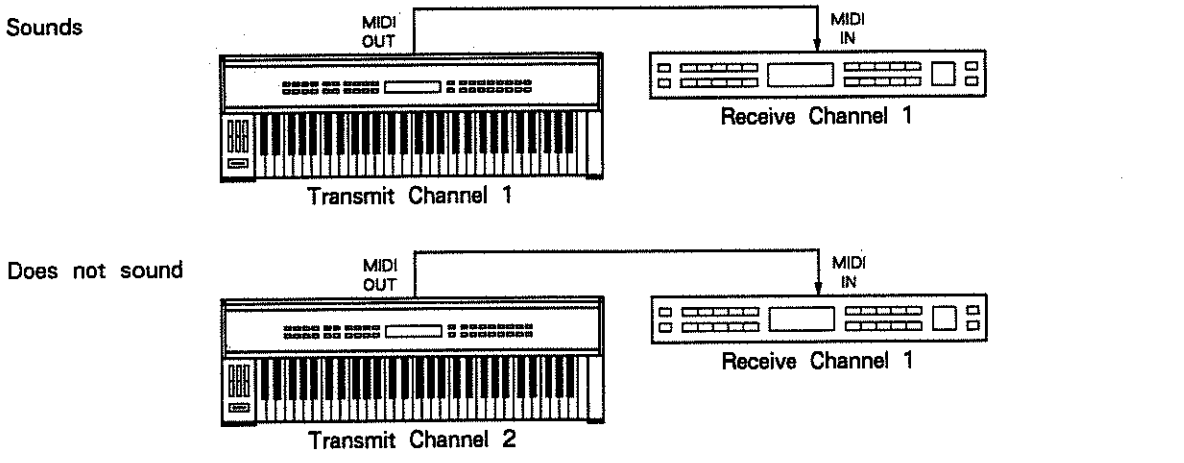
b. MIDI channels

Using "channels", MIDI can transmit data independently to multiple devices over a single cable.

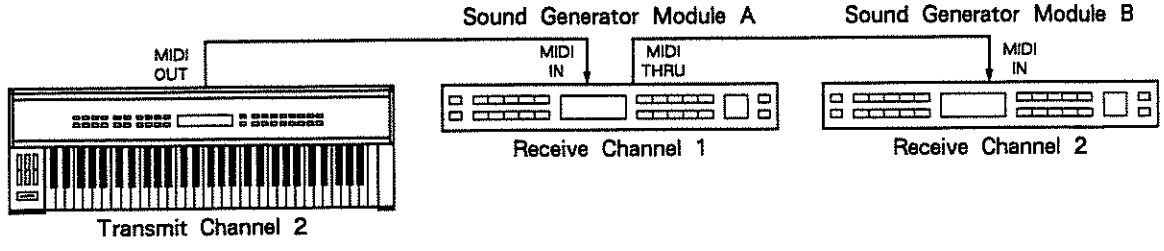
You may think of MIDI channels as being similar to television channels. By switching channels on a television receiver, you can receive many different broadcasts. When the channel of the transmitter matches the channel of the receiver, the data of that channel is received.



MIDI has sixteen channels, numbered 1—16. When the MIDI channel of the receiving device matches the MIDI channel of the transmitting device, the data arriving on that channel is received.



Only Sound Generator Module B Sounds



2. MIDI Data Used by the U-20

MIDI uses various types of "message" to transmit data. The U-20 uses the following types of MIDI message.

Channel Voice Messages	Note Data Program Change Control Change Pitch Bender Aftertouch
System Messages	Exclusive Messages etc.

■ Channel Voice Messages

Channel voice messages are transmitted and received on a specific MIDI channel. These messages include basic types of musical data.

●Note : messages from the keyboard

Note messages tell how the keyboard is being played. They indicate which key (the note number) was played, and how strongly (the velocity). Similar messages are transmitted when a key is released. For the U-20's Rhythm Part and most other rhythm machines, each note number will play a different rhythm sound.

●Program Change : data that selects sounds

Program change messages are used mainly to select sounds. The U-20 uses program change messages to switch Keyboard Patches, Sound Patches, Timbres, and Rhythm Setups. Devices made by different manufacturers will respond in different ways to program change messages. Check the manuals for your equipment.

●Control Change : data for musical expression

Control change messages control musical expressions such as vibrato, hold, volume, and pan. In addition to its bender lever (modulation) and hold pedal, the U-20 can transmit control change messages using three other controllers (EXT, C1, C2). These control change messages can control not only Timbre and Effect parameters for the U-20's own internal sound generator, but can also control external MIDI devices. Devices made by different manufacturers may transmit and receive different types of control change message, and respond in different ways to these messages. Consult the MIDI implementation charts of your equipment to see which control change messages are transmitted and received.

●Pitch Bender

Pitch bender messages transmit the position of the pitch bender lever. Only the position of the lever is transmitted, meaning that the actual pitch change (bend range) will depend on the settings of the sound generator. In the U-20, the pitch bend range is determined by a Timbre or Rhythm Set parameter.

●Aftertouch

Aftertouch data transmits the force with which you press down on the keyboard after playing a note. The effect this will have depends on the settings of the sound generator. Aftertouch is divided into "channel aftertouch" and "polyphonic aftertouch".
Channel aftertouch transmits a single aftertouch value telling the pressure of the key being pressed most strongly, and affects the entire MIDI channel.
Polyphonic aftertouch transmits an aftertouch value for each key, telling how strongly each key is being pressed. This allows you to individually control the sound of each note being pressed, even within a single MIDI channel. The U-20's sound generator responds to both types of aftertouch, but only channel aftertouch can be controlled from the U-20's keyboard.

■System Messages

System messages are used to control all devices in the entire MIDI-connected system, regardless of their channel number. In addition to exclusive messages (explained below), system messages include various types of message used by sequencers, and messages that help the system keep running properly.

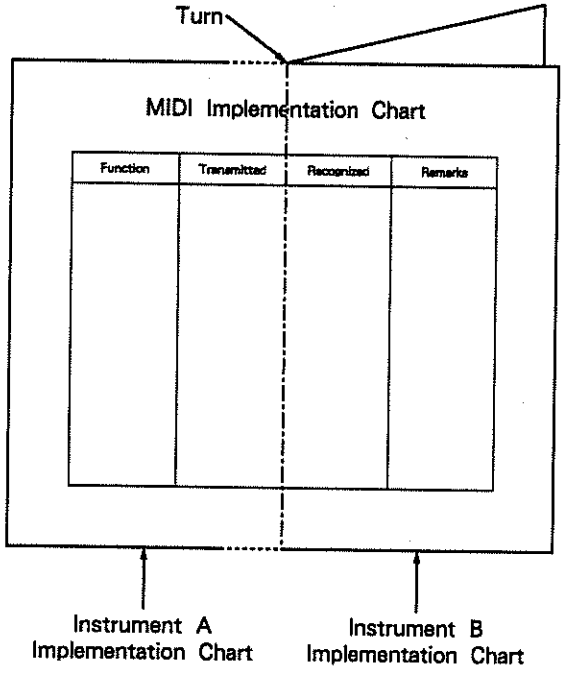
●Exclusive Messages

Exclusive messages carry data unique to each device, such as data for a device's internal memory. Normally, they are transmitted and received only between devices of the same type made by the same manufacturer. For example, you can use exclusive messages to transmit U-20 Timbre or Patch data to another U-20, or to store U-20 Timbre or Patch data in a sequencer.

■ About the MIDI Implementation Chart

MIDI is able to transmit and receive data between various types of device, but not all devices are able to transmit and receive the same types of data. The owners manual of each MIDI device has a "MIDI Implementation Chart" which shows the types of data that the device is able to transmit and receive. (☞page 191)

All implementation charts are a standard size, so that you can place two charts side by side to see how two devices will be able to communicate with each other.



2 HOW THE U-20 USES MIDI

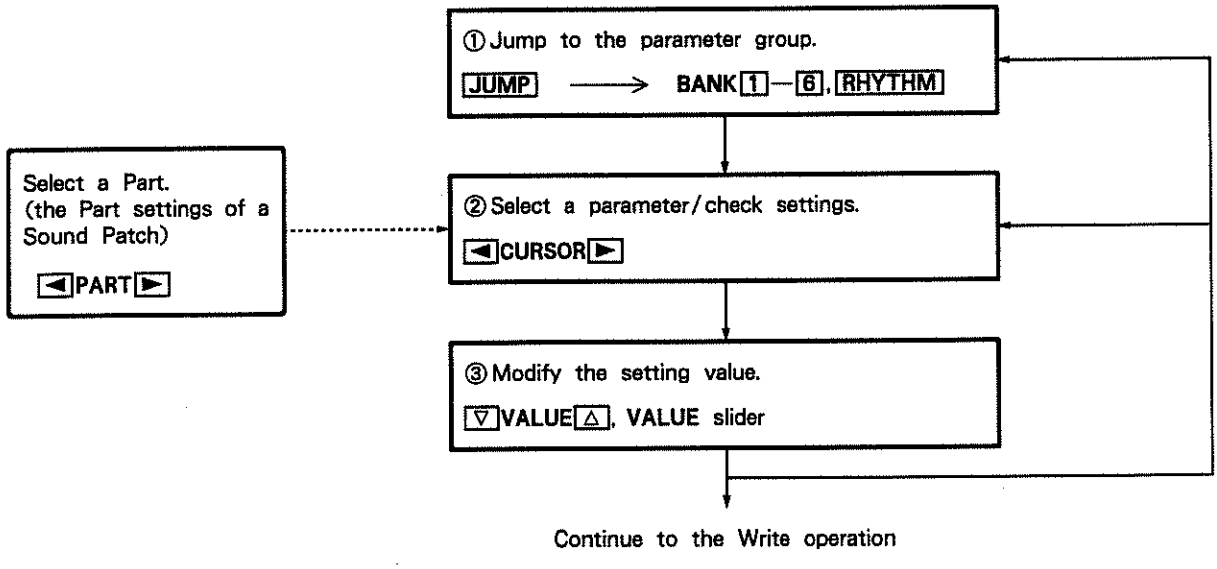
The U-20's MIDI functions allow it to act as a multi-timbral sound generator and also as a keyboard controller. Here, after explaining how the U-20's MIDI system is organized, we will explain the U-20's MIDI functions and settings that apply to each type of MIDI data. (For details, refer to "MIDI Implementation" (☞page 178).)

1. Editing the MIDI Parameters

Here we will explain how the U-20's MIDI parameters are organized, and how to edit them.

a. Editing procedure

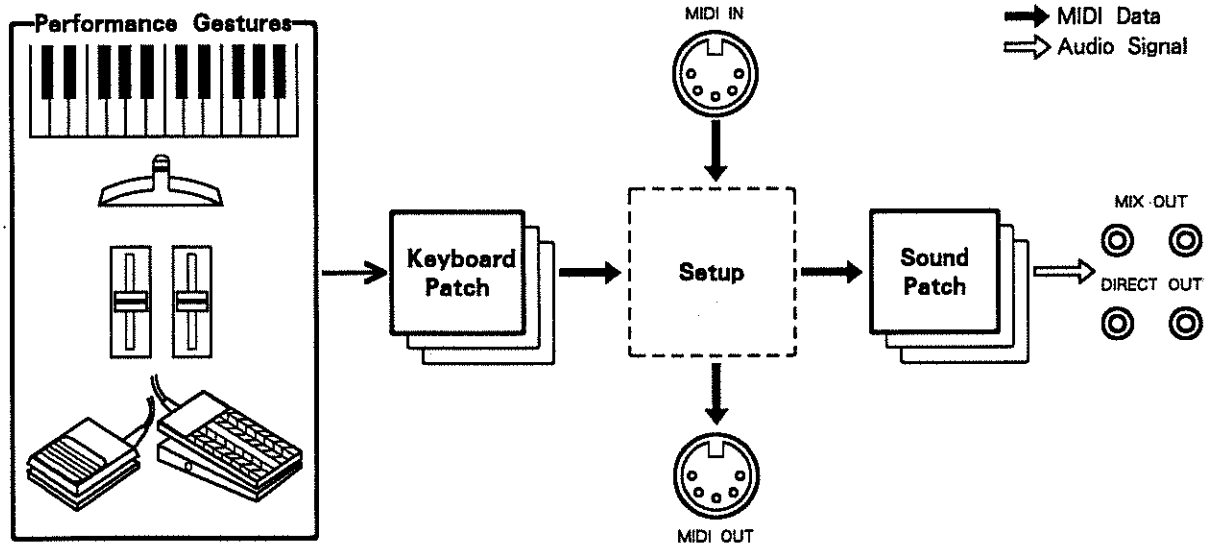
Editing procedure for MIDI parameters is essentially the same as when editing Patches or Timbres. The various MIDI parameters are related in many ways. Before you make settings, make sure that you understand how the U-20 is organized, and what you want to accomplish with your settings.



* Edits for parameters settable for each Keyboard Patch or Sound Patch are temporary. If you want to keep your edited settings, write them into memory (☞page 133).
There is no need to write setup parameters into memory.

b. MIDI parameters

The U-20 has the following MIDI parameters. These parameters are effective in Link Play mode, Keyboard Patch mode, and Sound Patch mode. In other play modes, only some of these parameters will be effective.



Setup (shared by all Patches)

- Common
  - Local Control Switch
  - Device ID
  - Patch Dump Switch
  - Rx System Exclusive Switch
- Keyboard
  - Rx Control Channel
  - Tx Setup Channel
  - Tx Control Change Switch
  - Tx Program Change Switch
  - Tx Channel Aftertouch Switch
  - Tx Active Sensing Switch
- Sound
  - Rx Control Channel
  - Rx Timbre Change Switch

Keyboard Patch (specified for each Patch)

- Tx Channel
- Tx Arpeggio Channel
- Tx Control Channel
- Tx Program Number
- EXT/C1/C2 Controller
  - Channel
  - Control Number

Sound Patch (specified for each Patch)

- Parts 1—6
  - Rx Channel
  - Key Range
  - Velocity Range
  - Rx Volume Switch
  - RX Pan Switch
  - Rx Hold Switch
- Rhythm Part
  - Rx Channel
  - Rx Volume Switch
  - Rx Hold Switch
- Control
  - Parameter 1—3
    - Control Number
    - Parameter Select

Here's how to jump to each parameter group. The parameter group will be indicated in the upper line of the display.

■ Setup

These settings include parameters related to exclusive messages, and settings shared by all Keyboard Patches and Sound Patches. Since edited values are directly stored, there is no need to write them into memory.

●Common

[JUMP] → BANK [1] Edit/Setup/MIDI/Common

These settings turn local control on/off, and determine how exclusive messages are handled.

●Kybd

[JUMP] → BANK [2] Edit/Setup/MIDI/Kybd

These settings are shared by all keyboard patches ; the Rx control channel that selects keyboard patches, and the transmit switch for control change and aftertouch messages.

●Sound

[JUMP] → BANK [3] Edit/Setup/MIDI/Sound

These parameters are shared by all Sound Patches ; the Rx control channel that selects Sound Patches, and the Timbre change receive switch.

■ Kybd

[JUMP] → BANK [4] Edit/Kybd/MIDI

These parameters are set for each Keyboard Patch. Edited settings will be stored into memory by the Keyboard Patch writing operation.

■ Sound

These parameters are set for each Sound Patch. Edited settings will be stored into memory by the Sound Patch writing operation.

●Part 1—6

[JUMP] → BANK [5] Edit/Sound/Part1/MIDI

These settings determine the Rx channel, key range, and velocity range of each Part. Use [◄] PART [►] to select Parts.

●R.Part (Rhythm Part)

[JUMP] → [RHYTHM] → CURSOR [►] (press twice)

Edit/Sound/R.Part

This determines the Rx channel of the Rhythm Part.

●Ctrl (Control)

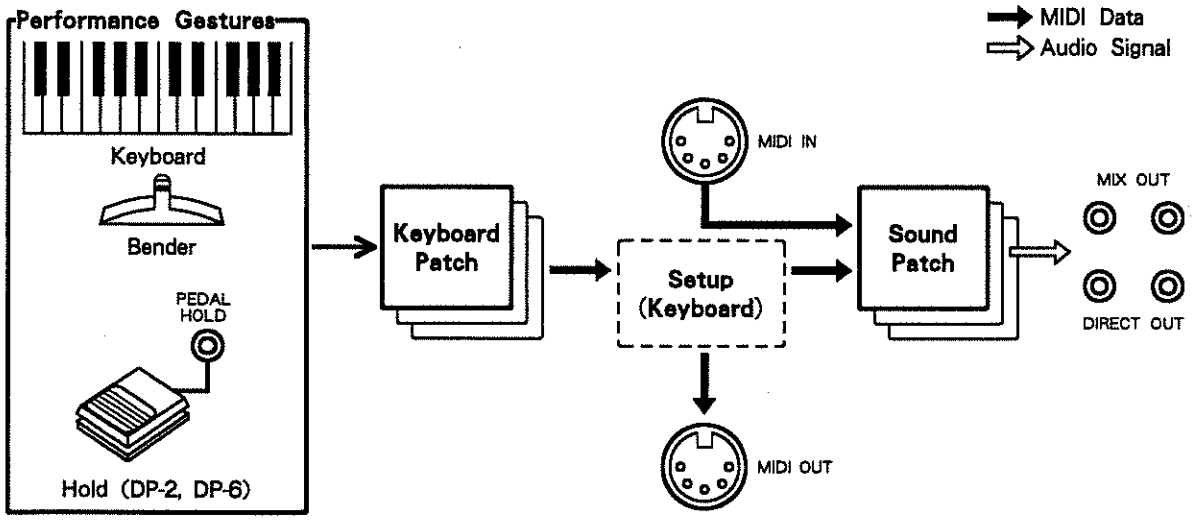
[JUMP] → BANK [6] Edit/Sound/Ctrl

These determine the Sound Patch parameters which will be affected by control change messages from external MIDI devices or from the Keyboard Patch.

2. Musical Performance Data

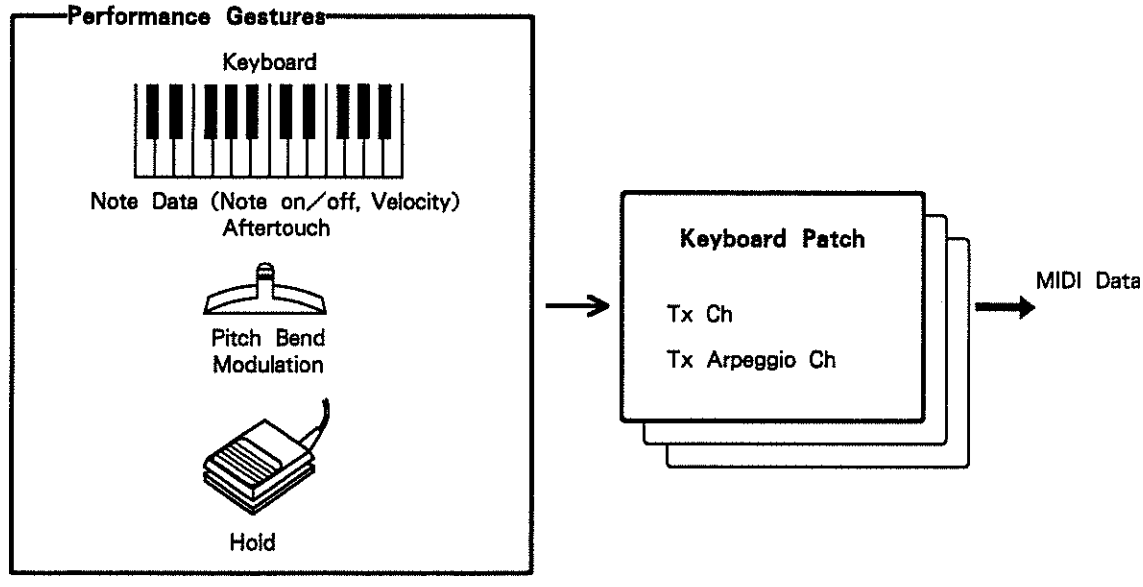
Here we will explain the settings that determine how musical performance data is handled ··· data from the keyboard, pitch bender, or modulation.

The following diagram shows how musical performance data is handled.



a. Keyboard Patch

When you play the U-20, the Keyboard Patch converts your playing into MIDI data. Each Keyboard Patch includes the following settings.



Select a Parameter

JUMP → BANK 4 → ◄CURSOR►

Tx Channel, Tx Arpeggio Channel

●Tx Ch : Tx Channel (1—16, Set)

Notes you play on the keyboard and control change data that results when you use the bender lever, hold pedal, etc. will be transmitted on this channel. If this is set to Set, data will be transmitted on the Tx setup ch (☞ page 93).

For example if the Tx setup ch is "1" and the keyboard patch Tx ch is "Set", note data will be transmitted on channel 1. By setting the Tx ch of several Keyboard Patches to "Set", you will be able to change the Tx ch of all these Keyboard Patches by simply changing the Tx setup ch.

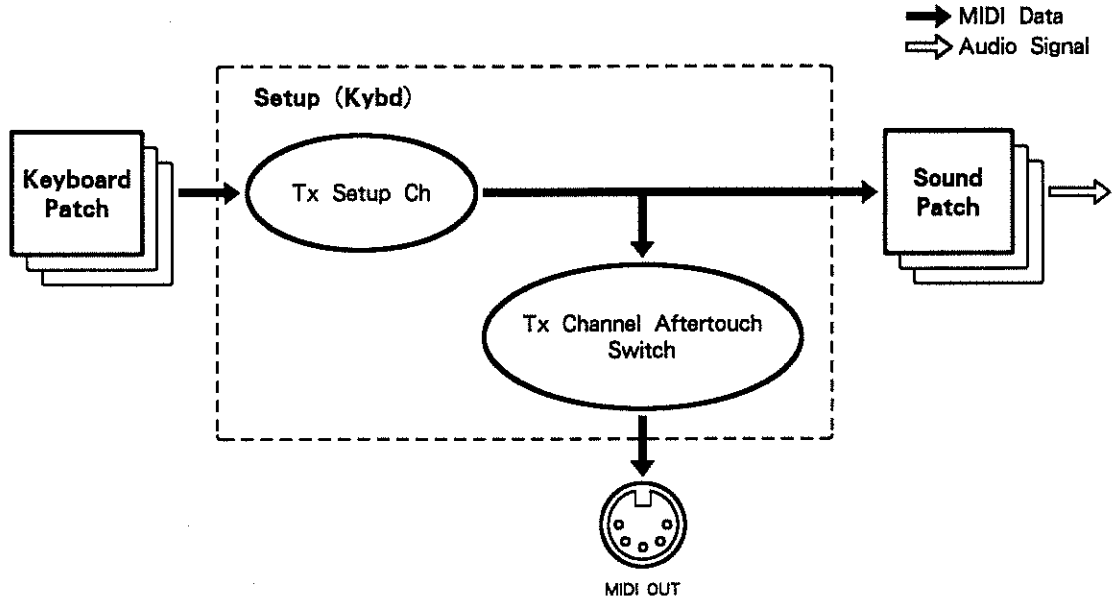
●Tx Arp Ch : Tx Arpeggio Channel (1—16, Set, Tx)

When using the arpeggio play function, it is possible to send the arpeggiated notes on a different MIDI channel. If this is set to Tx, the Tx ch will be used. If this is set to Set, the Tx setup ch will be used. These settings will have the following results.

Tx Arp Ch	During Arpeggio Play		Note Data during Normal Playing
	Notes you Play	Notes of the Arpeggio	
When specified channel is different than Tx ch	Tx Ch	Tx Arp Ch	Tx Ch
When specified channel is "Tx" or the same as Tx ch	Not Output	Tx Ch	Tx Ch

b. Setup (keyboard)

Setup (keyboard) determines the Tx setup ch and whether or not to transmit aftertouch data. These settings are shared by each Keyboard Patch.



Select a Parameter

JUMP → BANK 2 → ◀CURSOR▶

Tx Setup Ch

Tx Channel Aftertouch Switch

●Tx Setup Channel (1—16)

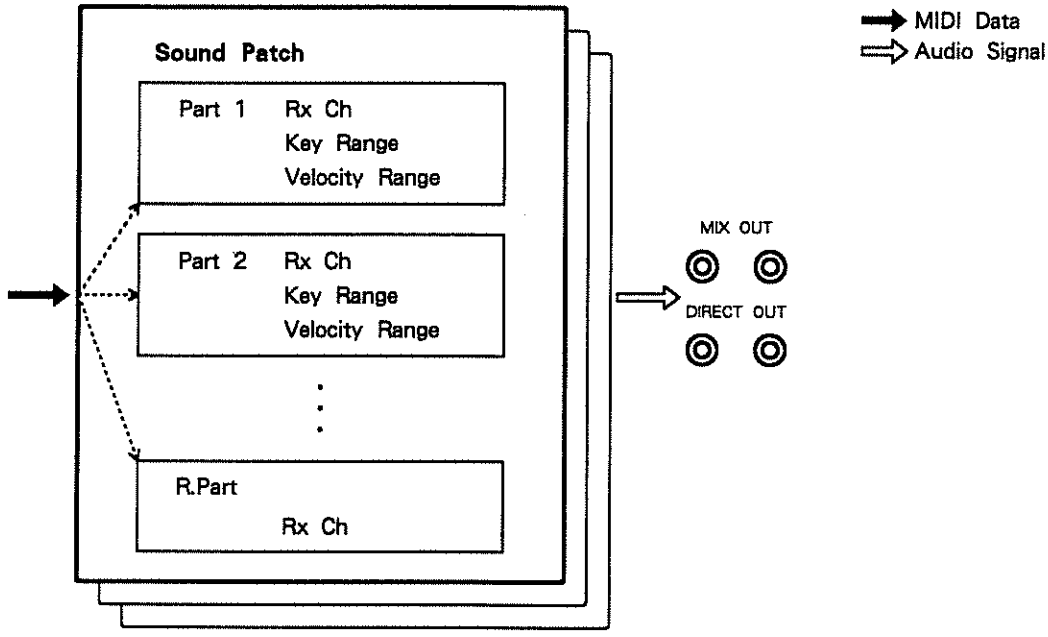
Use this when you want to transmit the performance data of each Keyboard Patch on the same channel. If you specify "Set" for the Tx ch (☞page 92) of each Keyboard Patch, each Keyboard Patch will transmit on the Tx setup ch specified here.

●Tx Channel Aftertouch Switch (Off, On)

This determines whether or not to transmit channel aftertouch data from MIDI OUT.

c. Sound Patch (part 1—6, rhythm part)

In a Sound Patch, data from the Keyboard Patch and from external MIDI devices is received by each Part on its own Rx channel. These settings determine the Rx channel for each Part.



Part 1—6

Select a Parameter (Select a Part)

JUMP → BANK 5 → ◄CURSOR► (◄PART►)

Rx Ch

```
Edit/Sound/Part1/MIDI
          Rx Ch=▒▒          ▶
```

Key Range

```
Edit/Sound/Part1/MIDI
◀ Key Range      ▒▒ - ▒▒ ▶
```

Velocity Range

```
Edit/Sound/Part1/MIDI
◀ Velo Range      ▒ - ▒▒▒
```

Rhythm Part

JUMP → RHYTHM → CURSOR► (press twice)

Rx Ch

```
Edit/Sound/R.Part
◀          Rx Ch=▒▒          ▶
```

●Part Rx Ch (1—16, Off)

This determines the receive channel for each Part. When playing the U-20's keyboard, make sure that the Rx ch of the part you want to play matches the Tx ch of the keyboard. By setting two or more Parts to the same Rx ch, you can play them in unison from the keyboard. Set unused Parts to "Off".
When using a sequencer to play the U-20's sound generator, set the Rx ch of each Part to match the channel of the incoming data from the sequencer. Set the Rx channel for the Rhythm Part in the same way.

●Key Range (C-1—G9)

This determines the range over which note data will be received by each Part. Key range is specified using note names. By setting two or more Parts to the same Rx ch and setting different key ranges for each Part, you can play different sounds from different areas of the keyboard. Middle C is C4. (☞Refer to page 7, "Front and Rear Panel".)

Example : Split bass and brass sounds around the C4 key

	Part 1	Part 2
Rx Ch	1	1
Key Range	C-1 – B3	C4 – G9
Timbre	Bass Sound	Brass Sound

* Keyboard Tx Ch : 1

●Velocity Range (1—127)

This determines the velocity range which will be received by each Part. By setting two or more Parts to the same Rx ch and setting different velocity ranges for each Part, you can play different sounds by changing the force (velocity) of your playing.

Example : Softly played notes sound a fingered bass,
strongly played notes sound a slap bass.

	Part 1	Part 2
Rx Ch	1	1
Velocity Range	1 – 99	100 – 127
Timbre	Fingered Bass Sound	Slap Bass Sound

* Keyboard Tx Ch : 1

3. Program Change

Program change data can select the U-20's Patches and Timbres.

Keyboard Patches, Sound Patches, and Timbres correspond to program changes as follows.

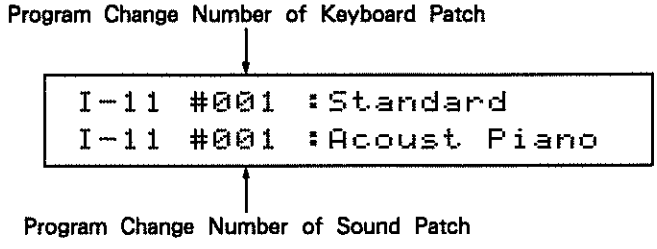
Keyboard Patch/Sound Patch

	Patch Number	Program Change Number
Internal Patch	I-11—I-88	1—64
Card Patch	C-11—C-88	65—128

Timbre

	Timbre Number	Program Change Number
A Group	A11—A88	1—64
B Group	B11—B88	65—128

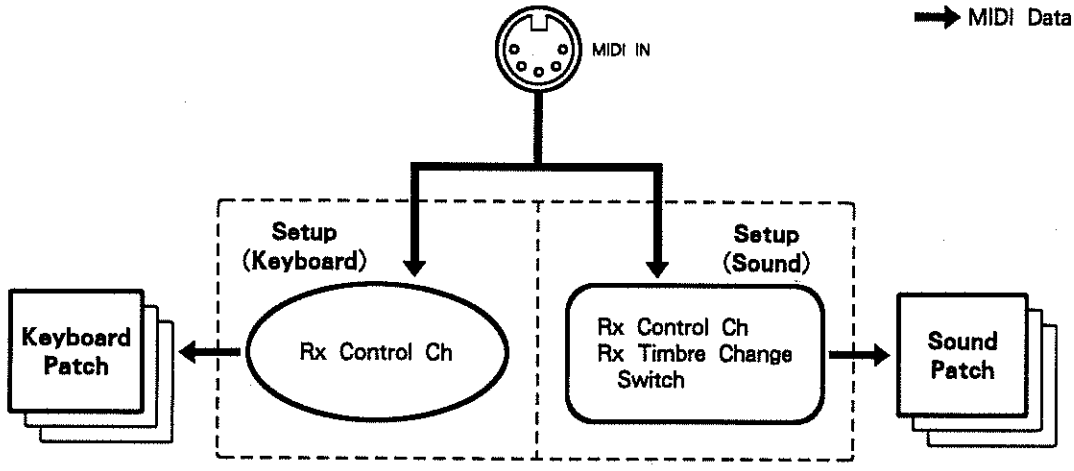
The play mode displays allow you to check the program change number corresponding to the selected Patch or Timbre.



a. Selecting Patches and Timbres from an external MIDI device

To switch U-20 Keyboard Patches, Sound Patches, and Timbres from an external MIDI device, set the following parameters.

* Program change data received from external devices will have the same result in all play modes (except ROM play mode).



Setup (Keyboard)

JUMP → BANK 2

Rx Control Ch

```
Edit/Setup/MIDI/Kybd
   Rx Control Ch=
```

Setup (Sound)

Select a Parameter

JUMP → BANK 3 → ◀ CURSOR ▶

Rx Control Ch

```
Edit/Setup/MIDI/Sound
   Rx Control Ch=
```

Rx Timbre Change Switch

```
Edit/Setup/MIDI/Sound
◀  Rx Timbre Change=
```

●Keyboard Patch Rx Control Ch (1—16, Off)

Program changes received on this channel will select Keyboard Patches. When set to Off, patches will not be selected.

●Sound Patch Rx Control Ch (1—16, Off)

Program changes received on this channel will select Sound Patches. When set to Off, patches will not be selected.

●Rx Timbre Change Switch (Off, On)

When "On" is selected, program changes from an external device or from the keyboard patch will switch the Timbre of the specified Part.

Example of channel settings for switching Patches and/or Timbres

Example			To select only the Keyboard Patch	To select only the Sound Patch	To simultaneously select the Keyboard Patch and the Sound Patch	To select the Timbre of Part 1 (Part 1 Rx Ch=1)
Channel on which program change data is transmitted			16	16	16	1
Setup	Kybd	Rx Control Ch	16	Off, or other than 16	16	Off, or other than 1
	Sound	Rx Control Ch	Off, or other than 16	16	16	Off, or other than 1
		Rx Timbre Change	---------	---------	---------	On

b. Transmitting program changes from a Keyboard Patch

It is possible to transmit a program change whenever you press a front panel button to select a Keyboard Patch. You can use this to select a desired Sound Patch, or to select sounds on an external MIDI sound generator or effects device.

Program change transmit will differ depending on the play mode.

Keyboard Patch Mode	The same program change data is transmitted to the Sound Patch and to external MIDI devices.
Link Play Mode	Program change data is transmitted only to external MIDI devices. The Sound Patch of the same number as the keyboard patch will always be selected.

Setup (Keyboard)

Select a Parameter

[JUMP] → BANK[2] → [◀]CURSOR[▶]

Tx Program Change Switch

●Tx Control Ch (1—16, Set, Tx)

This determines the channel on which program change data will be transmitted from a Keyboard Patch. It can be set independently for each Keyboard Patch. If this is set to Set, data will be be transmitted on the Tx setup ch. If this is set to Tx, data will be transmitted on the same channel as the Tx Ch.

●Tx Program Change Number (1—128, P.N., Off)

A program change number to be transmitted can be set independently for each Keyboard Patch. If this is set to P.N., the transmitted program change message will have the same number as the Keyboard Patch. If this is set to Off, program change data will not be transmitted.

●Tx Program Change Switch (Off, On)

When you do not want a Keyboard Patch to transmit program change data from MIDI OUT, set this to Off.

* When you want program change data from a Keyboard Patch to select the Sound Patch or Timbre, make settings for Rx control ch and Rx Timbre change switch of Setup (sound). (☞Refer to "Selecting Patches or Timbres from an external MIDI device", page 97.)

4. Using Controllers

While playing, you can use the EXT, C1 and C2 controllers to adjust the value of timbre and effect parameters.

The Keyboard Patch will convert controller movements into MIDI control change data. For each Sound Patch, you can specify three control change numbers, and specify the parameter to be controlled by each.
It is also possible to use these controllers to control external MIDI devices, or to control Timbre and Effect parameters from an external MIDI device.

■Keyboard Patch Settings

These determine the control functions of the C1 and C2 control sliders and a expression pedal connected to the rear panel EXT CONTROL jack. Specify functions and settings for each controller in the same way.

* During editing, the C2 control slider modifies the value being set, and cannot be used as a controller.

●Channel (Tx Ch, Tx Ctrl Ch)

Select the transmit channel on which each controller will transmit control change data.

Tx Ch : transmit on the note data transmit channel (☞page 92)

Tx Ctrl Ch : transmit on the program change data transmit channel (☞page 100)

When controlling Timbre parameters, be sure to select "Tx Ch".

When controlling Effect parameters, make sure that the Tx control ch of the Keyboard Patch matches the Rx control ch of the setup (sound), and select "Tx Ctrl Ch".

Setting Example

Parameter			When Controlling Timbre Parameters	When Controlling Effect Parameters
Setup (Sound)	Rx Control Ch		----------	16
Keyboard Patch	Tx Ctrl Ch		----------	16
	EXT, C1, C2	Ch	Tx Ch	Tx Ctrl Ch

●Control Number (0—5, 7—31, 64—95, Off)

This determines the control change number transmitted by each controller. When "Off" is selected, no data is transmitted. The U-20 has the following pre-defined control functions. When using these, select the appropriate control number.

# 1	Modulation
# 7	Part Level
# 10	Pan
# 64	Hold

When controlling Timbre or Effect parameters, make settings in the Sound Patch to specify control numbers for the parameters. Be sure to use control numbers other than the three shown above. When controlling external MIDI devices, remember than the control numbers that can be received (and the result they will have) will differ for each device. Consult the MIDI implementation chart for each device.

■ Setup (Keyboard) Settings

●Tx Control Change Switch (Off, On)

This determines whether or not control change data from the Keyboard Patch is transmitted from MIDI OUT. This affects not only control change data from the controllers, but also turns transmit On/Off for control change data from the bender lever (modulation) and hold pedal.

■ Sound Patch Settings

For each Sound Patch, you can specify up to three parameters to be controlled by control change data.
In addition, you can specify for each Part whether or not control change messages for Volume (Part Level), Pan, and Hold will be received. (For the Rhythm Part, you can specify reception for Volume and Hold.)

●Control Number (0—5, 7—31, 64—95, Off)

Set this to match the control number you specified for the Keyboard Patch. When controlling the U-20 from an external MIDI device, set this to match the control number transmitted by that device. When this not used, select "Off".

●Parameter Select

Select the parameter you want to control.
When selecting Timbre parameters, make sure that the control change data transmit channel of the Keyboard Patch is the same as the Rx channel of the Part. When selecting Effect parameters, make sure that the control change data transmit channel of the Keyboard Patch is the same as the Rx control ch of the Setup (sound).

Selectable Parameters

	Display	Parameter
Timbre Parameters	Timbre Level	Timbre Level
	Env Attack	Env Attack Rate
	Env Decay	Env Decay Rate
	Env Sustain	Env Sustain Level
	Env Release	Env Release Rate
	A.Bend Depth	Auto Bend Depth
	A.Bend Rate	Auto Bend Rate
	Detune Depth	Detune Depth
	Vib Rate	Vibrato Rate
	Vib Waveform	Vibrato Waveform
	Vib Depth	Vibrato Depth
	Vib Delay	Vibrato Delay
	Vib RiseTime	Vibrato Rise Time
	Vib ModDepth	Vibrato Modulation Depth
Effect Parameters	Chrs Level	Chorus Level
	Chrs Rate	Chorus Rate
	ChrsFeedback	Chorus Feedback
	Rev Level	Reverb Level
	DlayFeedback	Delay Feedback

●Rx Volume Switch (Part Level) (Off, On)
Rx Pan Switch (Off, On)
Rx Hold Switch (Off, On)

For each Part, you can specify whether or not control change messages for Volume (Part Level), Pan, and Hold will be received. For the Rhythm Part, you can make settings for Volume (Part Level) and Hold. Normally you will leave all these On.

■ Setting Example

When using the keyboard to play Part 1, this example shows how you could use the EXT controller to adjust the part level and the C1 slider to adjust the reverb level.

Parameter				Setting
Setup	Kybd	Tx Setup Ch		1
		Tx Control Change		On
	Sound	Rx Control Ch		16
Keyboard Patch		Tx Ch		Set (1)
		Tx Ctrl Ch		16
		EXT :	Ch	Tx Ch
			Ctrl #	7
		C1 :	Ch	Tx Ctrl Ch
			Ctrl #	31
Sound Patch	Part	Part1	Rx Ch	1
			Rx Volume	On
	Ctrl	Prm1	#	31
			Parameter	Rev Level

5. Exclusive Messages

The U-20 can transmit and receive Timbre and Patch settings as exclusive messages. This allows you to use a sequencer to store data, or to transfer data between two U-20s. Here we will explain the settings related to exclusive message transmit and receive. The actual transmit/receive procedure is explained in "Data Transfer Using MIDI" (☞page 143).

Select a Parameter

[JUMP] → BANK[1] → [◀]CURSOR[▶]

Device ID

Patch Dump Switch

Rx System Exclusive Switch

●Device ID (1—32)

When transferring data, the device IDs of the transmitting and receiving devices must match.

●Patch Dump Switch (Off, On)

The patch dump function transmits Patch data as a system exclusive message. When this is set "On", an exclusive message will be transmitted every time you press a front panel button to select a Keyboard Patch or Sound Patch.

* When this is set "On", patch selection will be a bit slower due to the exclusive message being transmitted each time a Patch is selected. Normally you will leave this "Off".

●Rx System Exclusive Switch (Off, On)

This determines whether or not exclusive messages will be received.

■ Local Control Switch (Off, On)

This turns on/off the MIDI connection between the Keyboard Patch and the Sound Patch. When local is "Off", playing the keyboard will not sound the internal sound generator, but note data will be transmitted from MIDI OUT. Incoming data from external MIDI devices will play the U-20 sound generator regardless of this "Local on/off" setting.
Normally you will leave this "On".

Setup (Common) **[JUMP] → BANK [1]**

```
Edit/Setup/MIDI/Common
    Local Control=          ▶
```

■ Tx Active Sensing Switch (Off, On)

Active sensing is MIDI data which is transmitted from MIDI OUT for the purpose of making sure that the MIDI connection has not been broken. Normally you will leave this "On".

Setup (Keyboard) **[JUMP] → BANK [2] → CURSOR [▶]** (Select a Parameter)

```
Edit/Setup/MIDI/Kybd
◀ Tx Active Sensing=
```

■ Writing Procedure for MIDI Settings

MIDI parameters settable for each Keyboard Patch are written into memory by the Keyboard Patch writing operation. MIDI parameters settable for each Sound Patch are written into memory by the Sound Patch writing operation. I.e., these MIDI parameters are handled in the same way as other individual Patch parameters.
Here we will briefly explain the procedure for writing a Keyboard Patch into memory. The procedure is the same for Sound Patches.

From the Keyboard Patch (Sound Patch) edit display, jump to the write display.

① [JUMP] → [ENTER]

```
Data/Write/Kybd
            Temp:I11 →I11
```

② [ENTER]

```
Data/Write/Kybd
Sure?  [VALUE▲] / [EXIT]
```

③ **If you are sure you want to write the data into memory, press VALUE [△].**
To cancel the operation, press [EXIT].

```
Data/Write/Kybd
   Function Complete.
```

*MIDI parameters in Setup do not need to be written into memory. The edited value is remembered.
*Details of the writing procedure are explained in "Data Mode Operations" (☞page 128).

■MIDI Settings of Factory Settings

Parameter Group		Parameter		Setting
Setup	Common	Local Control		On
		SysEx Device ID		17
		SysEx Patch Dump		Off
		Rx SysEx		Off
	Kybd	Rx Control Ch		Off
		Tx Setup Ch		1
		Tx Control Change		On
		Tx Program Change		On
		Tx Ch Aftertouch		On
		Tx Active Sensing		On
	Sound	Rx Control Ch		16
		Rx Timbre Change		Off
Keyboard Patch		Tx Ch		Set
		Tx Arpeggio Ch		Tx
		Tx Control Ch		Tx
		Tx Program Change #		P.N
		EXT	Ch	Tx Ch
			Ctrl #	Off
		C1	Ch	Tx Ch
			Ctrl #	Off
		C2	Ch	Tx Ch
			Ctrl #	Off
Sound Patch	Part	1	Rx Ch	1
			Key Range	C-1 – G9
			Velocity Range	1 – 127
		2—6	Rx Ch	Off
	R.Part	Rx Ch		10
	Ctrl	Prm1	Ctrl #	Off
			Parameter	Timbre Level
		Prm2	Ctrl #	Off
			Parameter	Timbre Level
		Prm3	Ctrl #	Off
			Parameter	Timbre Level

* The values of parameters which can be set for each Part in a Sound Patch (Rx channel, etc.) will differ for each Sound Patch. This table shows the setting values for Sound Patch I-11 : Acoust Piano.

3 TAKING FULL ADVANTAGE OF THE U-20

Here we will explain some ways in which MIDI can help you take full advantage of the three play modes that use Patches (Link Play mode, Keyboard Patch mode, Sound Patch mode).

Functions in each play mode are as follows. Use the mode most appropriate for your musical situation.

Play mode	Part played from the keyboard	Selected by INT/A, CARD/B, BANK, NUMBER	How program change data transmitted from the Keyboard Patch is handled	Musical data received at MIDI IN
Link Play mode	Parts with a Rx channel that matches the Tx ch of the Keyboard Patch	Keyboard Patch and Sound Patch	Transmitted from MIDI OUT	Received as a multi-timbral sound generator
Keyboard Patch mode		Keyboard Patch	Transmitted to the Sound Patch which transmits from MIDI OUT	
Sound Patch mode		Sound Patch	Not transmitted	

1. Using the U-20 by itself

The U-20 can be connected with various MIDI devices and used in many different ways, but MIDI provides many possibilities even when using the U-20 by itself. Here we will explain some examples of creative ways to use a single U-20.

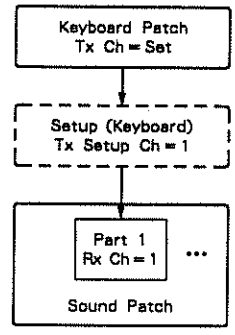
■ Link Play Mode

When using the U-20 by itself, Link Play mode is especially convenient.
In Link Play mode, panel buttons will select Keyboard Patches and Sound Patches together. If you set up a Sound Patch for each Keyboard Patch, the keyboard settings will always be appropriate for the sound you are playing. Or, you can use program change data transmitted from the Keyboard Patch to select memories on an external MIDI Sound generator or effects device.

■ Combining Parts

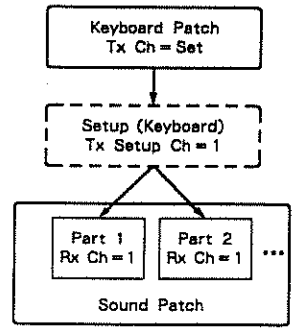
Set the channel and key range for each Part, and try out various combinations of Parts.

●Basic Setting : use only Part 1



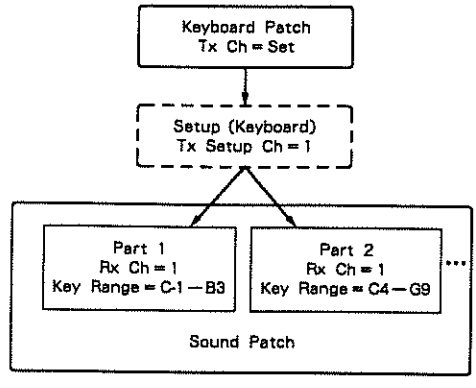
Parameter Group		Parameter		Setting
Setup	Kybd	Tx Setup Ch		1
Keyboard Patch		Tx Ch		Set
		Tx Arp Ch		Tx
Sound Patch	Part	1	Rx Ch	1

●Play two Timbres at once



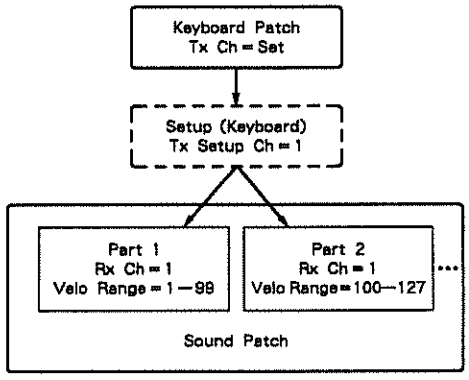
Parameter Group		Parameter		Setting	
Setup	Kybd	Tx Setup Ch		1	
Keyboard Patch		Tx Ch		Set	
		Tx Arp Ch		Tx	
Sound Patch	Part	1	Rx Ch	1	◀
		2	Rx Ch	1	◀

●Key Split : play two different Parts split around the C4 key



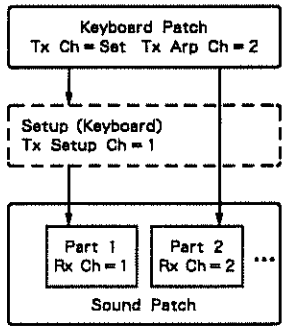
Parameter Group		Parameter		Setting	
Setup	Kybd	Tx Setup Ch		1	
Keyboard Patch		Tx Ch		Set	
		Tx Arp Ch		Tx	
Sound Patch	Part	1	Rx Ch	1	
			Key Range	C-1 — B3	◀
		2	Rx Ch	1	
			Key Range	C4 — G9	◀

●Velocity Switch : switch Parts by playing dynamics (softly played notes play part 1, strongly played notes play part 2)



Parameter Group		Parameter		Setting
Setup	Kybd	Tx Setup Ch		1
Keyboard Patch		Tx Ch		Set
		Tx Arp Ch		Tx
Sound Patch	Part	1	Rx Ch	1
			Velo Range	1 – 99 ◀
		2	Rx Ch	1
			Velo Range	100 – 127 ◀

●Arpeggio Play : changing the arpeggio Part (Arpeggiated notes use part 2)

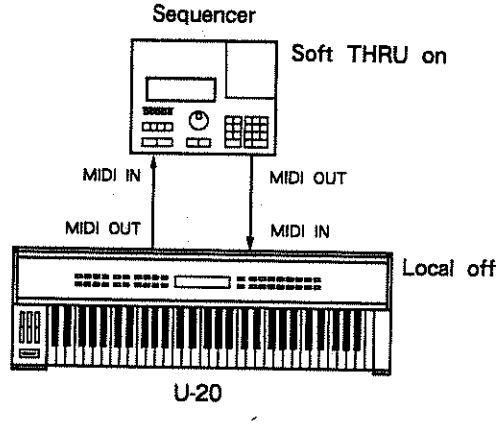


Parameter Group		Parameter		Setting
Setup	Kybd	Tx Setup Ch		1
Keyboard Patch		Tx Ch		Set
		Tx Arp Ch		2 ◀
Sound Patch	Part	1	Rx Ch	1
		2	Rx Ch	2 ◀

2. Using a Sequencer

Here's how to use the U-20's keyboard to record data into a sequencer, and playback the recorded sequence data to play the U-20's sound generator.

●Connections and Settings Connect the U-20 and the sequencer as shown.
Set the soft THRU of the sequencer "On", and the U-20 to "Local off". If the sequencer has no soft THRU function, set the U-20 to "Local on".

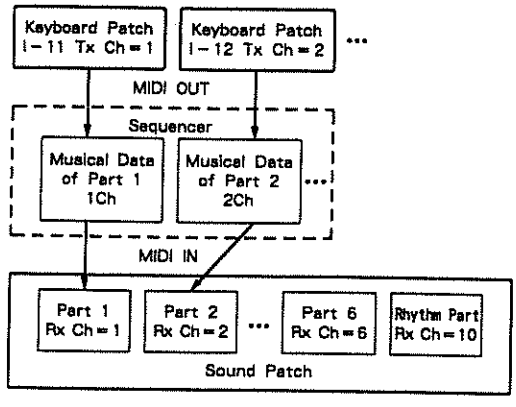


* The "soft thru" function of a sequencer allows data received at MIDI IN to be re-transmitted from MIDI OUT.

●Recording

Keeping in mind the Rx channel and sound you will use for each part, create several Keyboard Patches for use when recording. Record each part separately into the sequencer. You can also use the Arpeggio play and Chord play functions.

Example : a Keyboard Patch for recording part 1 (Rx Ch = 1)



Parameter Group	Parameter		Setting
Keyboard Patch	Tx Ch		1
	Tx Ctrl Ch		Tx
	EXT :	Ch	Tx Ch
		Ctrl #	07
	C1 :	Ch	Tx Ch
		Ctrl #	10

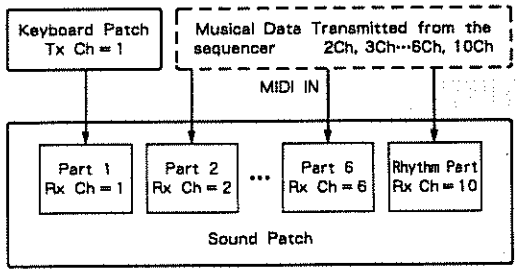
By recording program change data (patch changes) and control change data (produced by the lever, slider and pedal controllers) in addition to musical data from the keyboard, you can add musical expressiveness to your recording.

●Sequencer Playback

Now let's playback the data you recorded into the sequencer, to make the U-20 produce sound. If you will be playing back sequence data that you originally recorded using another synthesizer or sound generator, make sure that the U-20's Timbre and Rhythm settings are appropriate for the sequence data.
If you want to play the keyboard during sequence playback, make Keyboard Patch settings to select a Part that will not be used by the sequencer.

* The U-20 always responds to data received at its MIDI IN in the same way, regardless of the play mode (except for ROM Play mode).

Setting example : Sound Patch MIDI settings when using 6 Parts and the Rhythm Part



Parameter Group		Parameter		Setting
Sound Patch	Part	1	Rx Ch	1
		2	Rx Ch	2
		3	Rx Ch	3
		4	Rx Ch	4
		5	Rx Ch	5
		6	Rx Ch	6
	R.Part	Rx Ch		10

●Using Exclusive Messages

You can use the U-20's Patch dump function to transmit the data for the selected Patch as an exclusive message from MIDI OUT. This data can be recorded into a sequencer along with the musical data (notes, etc.). When the recorded sequence data is played back, the data for the Patch will be transmitted along with the musical data (notes, etc.), meaning that the music will be played with the exact sound (U-20 Patch) that was used to record it. In other words, the sequencer can be used to set up sounds as well as control them.
It is also possible to use the bulk dump function to transmit the entire contents of the U-20's memory to a sequencer for storage. This is explained in "Data Transfer Using MIDI" (☞page 143).

■ About Sequencer

A sequencer is a device uses MIDI to record and play back music. Sequencers can record (store) many types of MIDI data. Unlike tape recorders which record the "sound" of an instrument, sequencer records a musical performance as change the instrumentation or speed of a musical performance recorded as MIDI data. Furthermore, sequence recording gives you many editing possibilities, such as allowing you to correct individual notes of the recorded data.

■ Velocity Offset and Sensitivity

Each Keyboard Patch includes a setting that allows you to limit the velocity produced by the keyboard. For example when using the U-20 keyboard to record a bass part, this function can be used to keep the velocity consistent, resulting in a smoother performance.

①[EDIT]→[◄]CURSOR[►] (Select Kybd)

```
Edit                  Setup
Chord Sound Timbre Rythm
```

②[ENTER]→CURSOR[►] (Select Perform)

```
Edit/Kybd
Name MIDI
```

③[ENTER]→[◄]CURSOR (Select Velo)

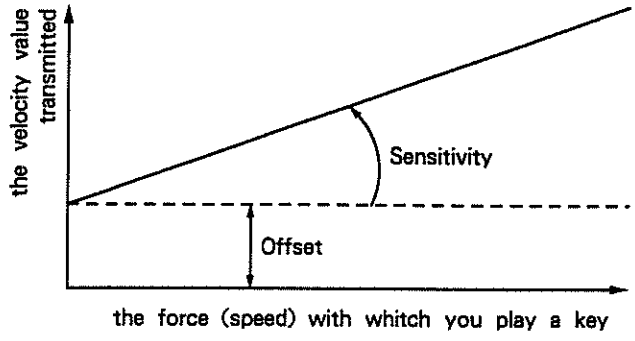
```
Edit/Kybd/Perform
     Trans Chord Arpe
```

④[ENTER]→[◄]CURSOR[►] (Select the offset or sensitivity value)

```
Edit/Kybd/Perform/Velo
  Offset=  1   Sens=126
```

Offset　　Sensitivity

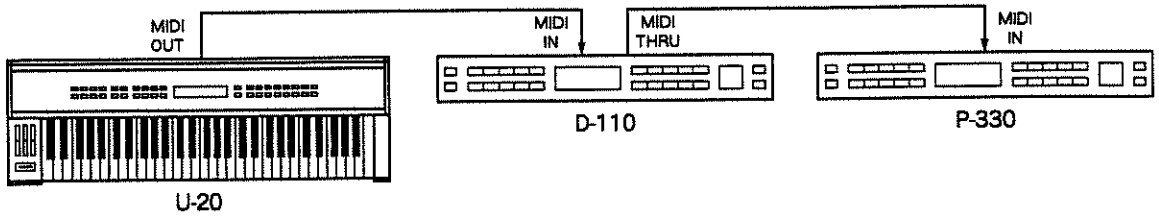
⑤Use [▽]VALUE[△] or the VALUE slider to modify the value.



*Normally you will leave this set at offset : 1, sensitivity : 126.
*Velocity offset and sensitivity can be set independently for each keyboard patch.

3. Using External Sound Generators

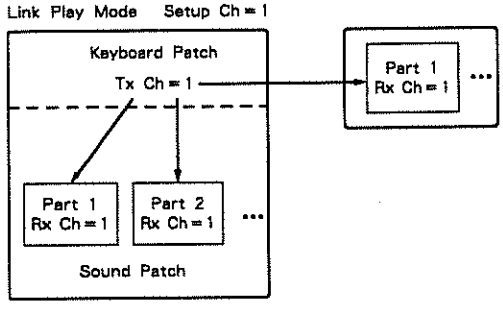
Connecting external synthesizers or sound generators such as the D-110 will provide even greater possibilities.



Set the each receive channel of the external sound generators by confirming the Rx channels of all U-20 parts.
In Link Play mode, program change data transmitted from the Keyboard Patch can be used to select memories on external Sound generators whenever a Sound Patch is selected.

Setting example : Layering the U-20's Parts 1 and 2 with the D-110's Part 1

U-20 D-110



U-20

Parameter Group		Parameter		Setting
Setup	Kybd	Tx Setup Ch		1
		Tx Control Change		On
Keyboard Patch		Tx Ch		Set
		Tx Ctrl Ch		Tx
		Pgm #		***
Sound Patch	Part	1	Rx Ch	1
		2	Rx Ch	1

D-110

Parameter Group	Parameter	Setting
Part1	Rx Ch	1

* Different devices may interpret incoming MIDI data in different ways. Refer to the MIDI implementation chart for each device.

■ Voice Reserve

The voice reserve parameter is effective when using the U-20 as a multi-timbral sound generator. The U-20 can simultaneously play up to 30 voices. Until the total number of sounding parts reaches 30 voices, each Part can sound as many notes as necessary. When the number exceeds 30 voices, the oldest notes will be turned off, meaning that the sound may break off unnaturally. Voice reserve allows you to specify a minimum number of voices that will be reserved for each Part, so that even when the limit of maximum simultaneous voices is exceeded, musically important Parts will not be unnaturally cut off.

Voice reserve can be set independently for each Part. It is not possible to make voice reserve settings that would result in a total of more than 30 voices for all Parts. While you make this setting, be aware of the remaining number of unreserved voices. For unused Parts, set the voice reserve number to 0.
As shown below, get the voice reserve display and use [▽]**VALUE**[△] or the **VALUE** slider to edit the settings.

● Parts 1—6 [JUMP] → **NUMBER** [6]

[◄]**PART**[►]

Remaining number of unreserved voices

Number of voices to reserve

● Rhythm Part [JUMP] → [RHYTHM] → [◄]**CURSOR**[►] (Select the parameter)

Remaining number of unreserved voices

Number of voices to reserve

*Edited settings are temporary. If you want to keep your edited settings, use the Sound Patch writing procedure to store them into memory.

MEMO

SECTION IV

SUMMARY

This section will summarize the procedures and functions in each mode of the U-20.

1 PLAY MODE OPERATIONS AND FUNCTIONS

Here we will explain the functions and operations of the Play modes.

a. Playing functions

Playing functions are as follows.

■ Keyboard Touch

●Velocity — The force (velocity) with which you play a key can control volume. Timbre settings will determine the effect of Velocity.

●Channel Aftertouch — By pressing down on a key after playing it, you can control pitch, vibrato and volume. Timbre settings will determine the effect of Aftertouch.

■ Control Panel

●VOLUME Slider — This slider adjusts the volume output from the MIX OUT jacks and the PHONES jack.

●C1/C2 Sliders — These sliders can control Timbre and Effect parameters of a Sound Patch. Since Control Change data is transmitted from MIDI OUT, you can also control external MIDI devices.
In the Keyboard Patch, set the Control Change number; and in the Sound Patch, set the Timbre and Effect parameters to be controlled.

●Bender/Modulation Lever
This lever is used to Pitch Bend (up/down) and to add Vibrato. Timbre settings will determine the effect of this Bender/Modulation lever.

■ Pedal Controls

●HOLD Jack — A pedal switch (DP-2, DP-6, optional) can be connected to control Hold.

●EXT CONTROL Jack — An expression pedal (EV-5, EV-10, optional) can be connected to function in the same way as the C1/C2 sliders.

■ Performance Functions (turned on/off from the panel while playing)

●Key Transpose This function shifts the range of the keyboard. The Key Transpose setting is part of the Keyboard Patch.

●Chord Play This function allows you to play chords by pressing a single note. A different chord can be assigned to each note C, C#,—B. From 8 previously created Chord Sets, you can select 2 for use in a Keyboard Patch.

●Arpeggio Play This function arpeggiates the keys you hold. Arpeggio Type and Rate settings are part of the Keyboard Patch.

■ MIDI

●MIDI IN This connector receives MIDI data from MIDI devices such as sequencers. The U-20 will function as a multi-timbral sound generator in any Play mode (except for ROM Play).

●MIDI OUT This connector transmits MIDI data. In Part Play mode, Rhythm Play mode, and ROM Play mode, MIDI data is not transmitted.

●MIDI THRU This connector re-transmits the MIDI data received at MIDI IN, without changing it in any way. This allows you to transmit the same data to several devices.

■ Program Changes Transmitted from a Keyboard Patch

For each keyboard patch, you can specify a program change number to be transmitted. When you select a keyboard patch from the front panel, this program change number will be transmitted from MIDI OUT.
In keyboard patch mode, this program change data can also select sound patches or timbres.

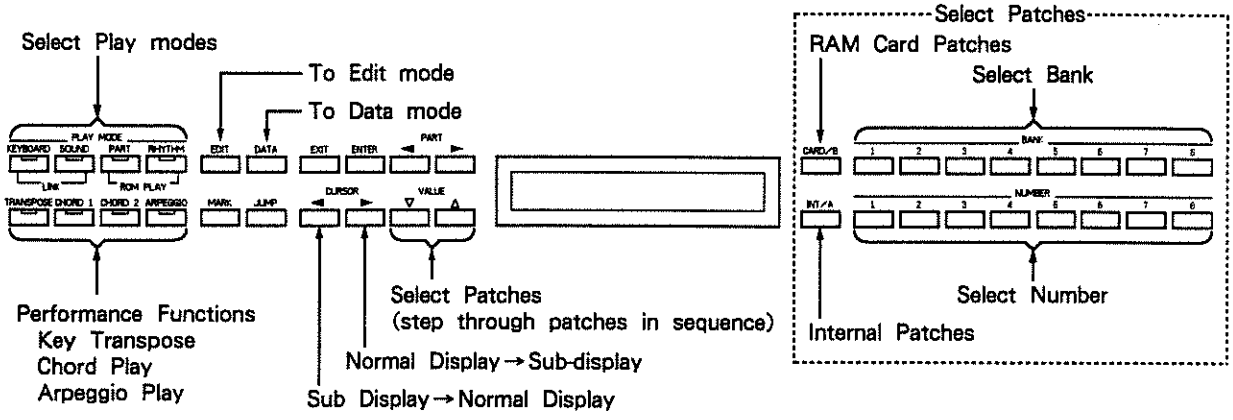
■ Patch Dump

The patch dump function allows you to transmit patch data as an exclusive message from MIDI OUT. If you select a patch while the patch dump switch (setup) is on, the data for the selected patch will be transmitted. (☞For details, refer to page 146, "Patch Dump".)

b. The three Play modes that use Patches

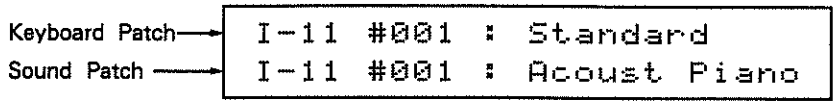
Here we will explain the operations and displays for Link Play mode, Keyboard Patch mode, and Sound Patch mode.

■ Panel Operations

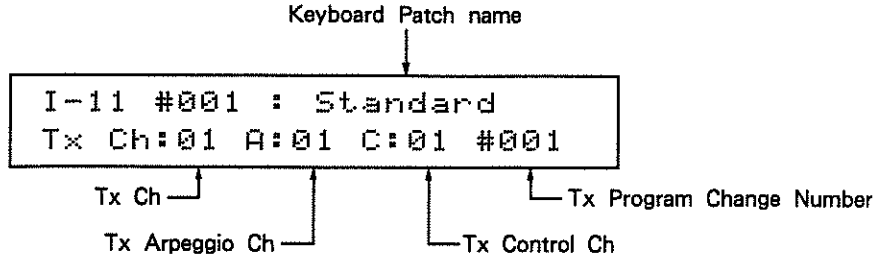


■ Displays

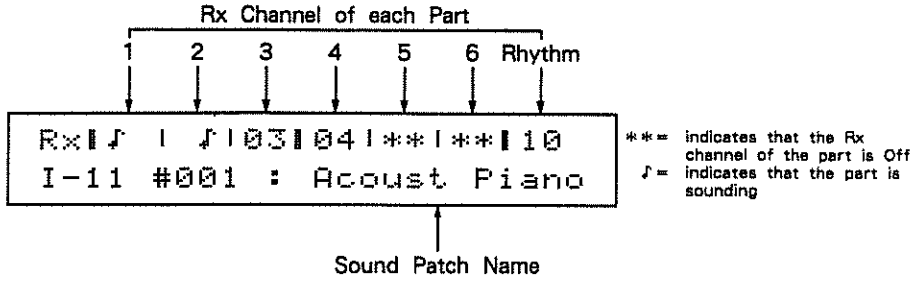
●Normal Displays (common to link play mode, keyboard patch mode, and sound patch mode)



●Keyboard Patch mode Sub-display



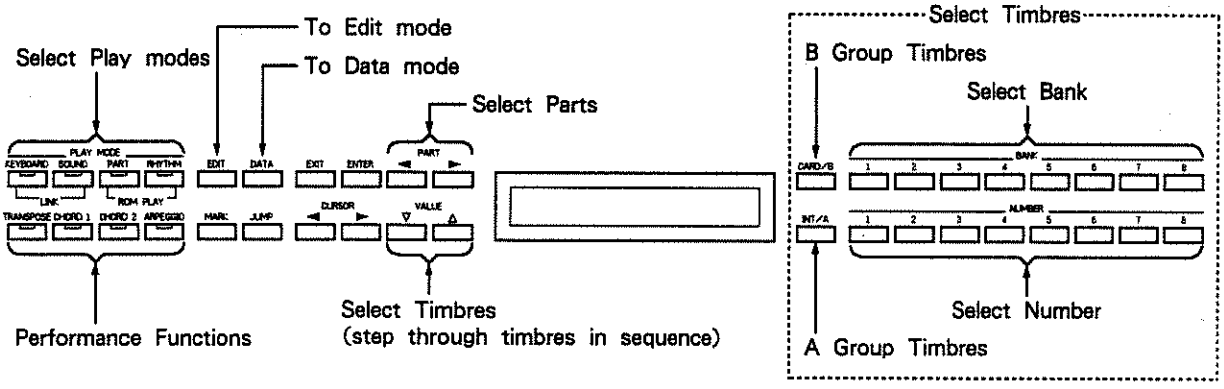
●Sound Patch mode Sub-display

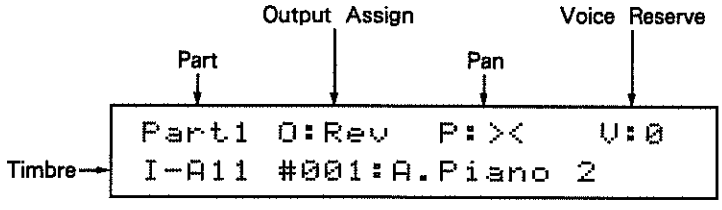


c. Part Play mode / Rhythm Play mode

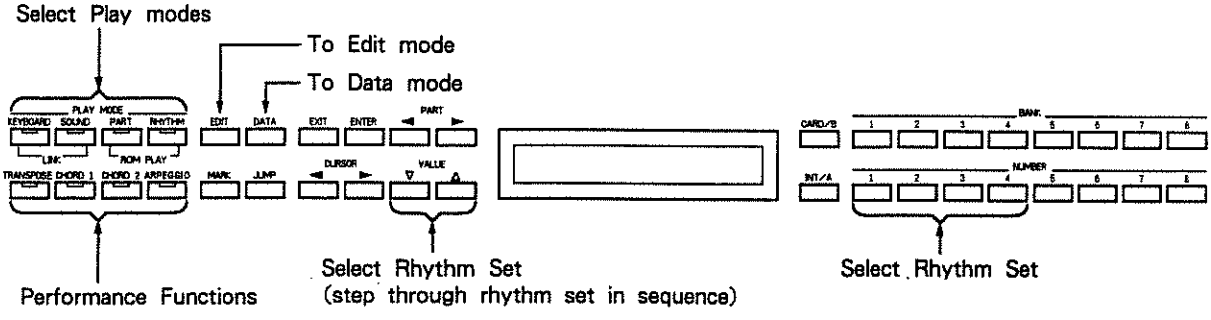
In part play mode and rhythm play mode you can play the part selected from the front panel, regardless of the Tx channel of the keyboard patch. In these play modes, your playing will not be transmitted from MIDI OUT as data.

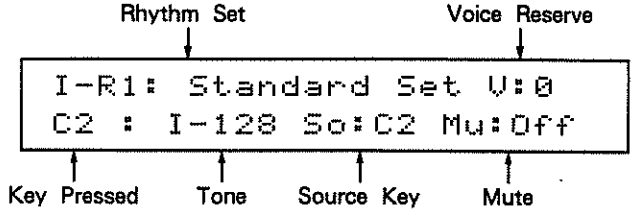
■ Panel Operations in Part Play mode





■ Panel Operations in Rhythm Play mode





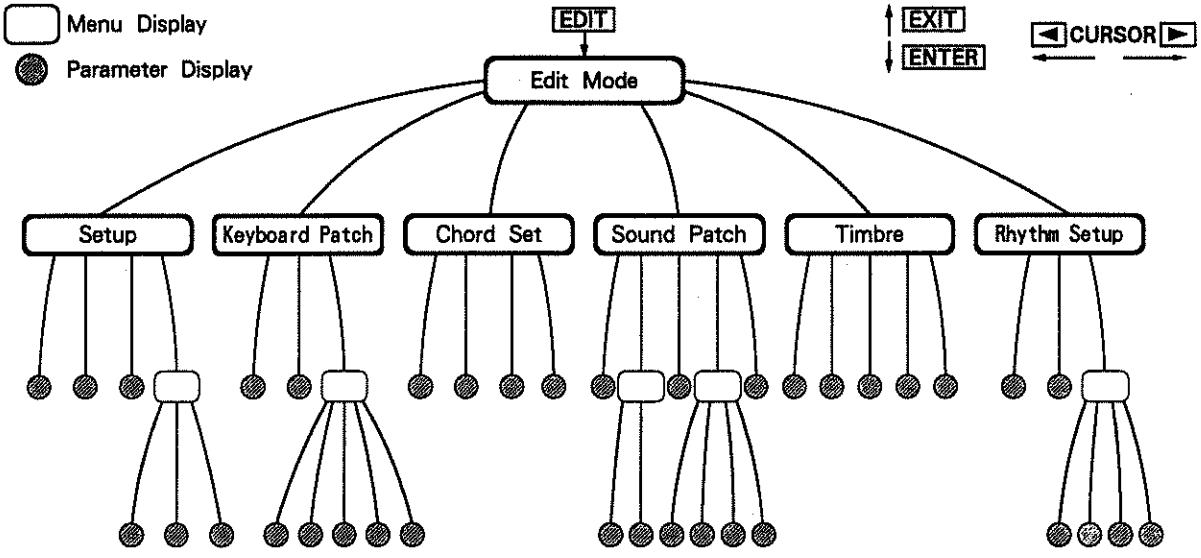
2 EDIT MODE OPERATIONS

The U-20's many parameters allow you to control the sound in various ways. To modify these parameters, you must enter edit mode. Here we will explain the various operations of edit mode, and also explain how the jump function can help you to edit more efficiently.

1. Edit Procedure

The many parameters in edit mode are organized into groups. Each group is organized as a many-branched tree.

There are two types of display in edit mode ; menu displays that allow you to select the parameter group, and parameter displays that allow you to modify parameter values. Select the parameter group for the parameter you want to edit, and get the parameter display. Next, select the parameter to edit, and modify the value.



① Press [EDIT] to enter edit mode (the menu display appears).
② Use [◄]CURSOR[►] to move the cursor (blinking) to the parameter group you want to edit.
③ Press [ENTER], and you will move to the first level (one level below) of the selected parameter group.
④ Repeat steps ② and ③ until you reach the parameter display.
⑤ Use [◄]CURSOR[►] to move the cursor (blinking) to the parameter value you want to edit.
⑥ Use [▽]VALUE[△] or the VALUE slider to modify the value.
⑦ Press [EXIT] to return to the previous upper level.

The upper line of the display will tell you which parameter group you are now in.

* To move from edit mode to play mode, simply press a play mode select button.

2. The Jump Function

The Jump function lets you to edit more efficiently, by allowing you to jump directly to a desired display instead of working your way through the tree structure. Some jump destinations are factory-defined presets, and you can define others to meet your own needs. (The jump function cannot be used in ROM Play mode.)

■ Jump Procedure

The Jump function assigns a jump destination to each of the U-20's buttons. Press [JUMP], and then press the button to which the desired destination has been assigned.

* If after pressing [JUMP] you decide not to jump, press [JUMP] once again.

■ Defining Jump Destinations (Mark Page)

You can assign any jump destination to each of the **BANK** [1]—[8] and **NUMBER** [1]—[8] buttons, using the following procedure.

①First select the display for the desired jump destination. The position of the cursor (blinking) will also be remembered.

Example : define the master tune display as a jump destination

```
Edit/Setup/M.Tune
  Master Tune=440.0Hz
```

②Press [MARK].

```
Edit/Setup/M.Tune
Mark:  Select Switch.
```

③Press the button (BANK [1]—[8], NUMBER [1]—[8]) that will be used to jump to that display.

```
Edit/Setup/M.Tune
Mark:  Page Memorized.
```

* To return to the factory settings, press [JUMP]→[MARK]. (☞Refer to page 24, "Editing Procedure using the Jump function".)

●Preset Jumps

The following jump destinations have been pre-defined for the following keys.

JUMP → KEYBOARD	Name a Keyboard Patch Edit/Kybd/Name Patch Name= **********
JUMP → SOUND	Name a Sound Patch Edit/Sound/Name Patch Name= **********
JUMP → PART	Select a Timbre for Parts 1—6 Edit/Sound/Part*/Timbre Timbre=▒▒▒: **********
JUMP → RHYTHM	Select a Rhythm Set for the Rhythm Part Edit/Sound/R.Part Rhythm=#▒: **********
JUMP → TRANSPOSE	Set the Key Transpose Edit/Kybd/Perform/Trans Key Transpose=▒▒
JUMP → CHORD1	Select a Chord Set (Chord 1) Edit/Kybd/Perform/Chord1 Chord=#▒: **********
JUMP → CHORD2	Select a Chord Set (Chord 2) Edit/Kybd/Perform/Chord2 Chord=#▒: **********
JUMP → ARPEGGIO	Make Arpeggio Settings Edit/Kybd/Perform/Arpe Type=▒▒▒▒▒ Rate=***
JUMP → EDIT	The edit mode display where you last were
JUMP → DATA	The data mode display where you last were
JUMP → EXIT	RAM Card Save/Load Data/Save-Load ▒▒▒ Int**Card
JUMP → ENTER	Write the parameter group you are currently editing Data/Write/***** ▒▒▒▒ Temp: *** **** * You can jump here only from edit mode, but not when editing a setup parameter which does not need to be written into memory.
JUMP → ◄ PART	Back up through the previously selected displays (up to 32 displays)
JUMP → PART ►	After backing up, advance one display.
JUMP → ◄ CURSOR	Move to the next parameter group (same effect as EXIT → ◄ CURSOR → ENTER)
JUMP → CURSOR ►	Move to the next parameter group (same effect as EXIT → CURSOR ► → ENTER)

●User-definable Jumps With the factory settings, jump destinations are assigned to these buttons as follows.

JUMP → BANK 1	Edit/Setup/MIDI/Common Local Control=▒▒ ▶
JUMP → BANK 2	Edit/Setup/MIDI/Kybd Rx Control Ch=▒▒ ▶
JUMP → BANK 3	Edit/Setup/MIDI/Sound Rx Control Ch=▒▒▒ ▶
JUMP → BANK 4	Edit/Kybd/MIDI Tx Ch=▒▒▒ Tx Arp Ch=***▶
JUMP → BANK 5	Edit/Sound/Part*/MIDI Rx Ch=▒▒ ▶
JUMP → BANK 6	Edit/Sound/Ctrl Prm1=#▒▒ **********▶
JUMP → BANK 7	Edit/Sound/Effect/Chorus Type=▒▒▒▒▒▒ ▶
JUMP → BANK 8	Edit/Sound/Effect/Reverb Type=▒▒▒▒▒ Time=**▶
JUMP → NUMBER 1	Edit/Timbre[*]/Name Timbre Name=**********
JUMP → NUMBER 2	Edit/Timbre[*]/Tone Tone = *-▒▒▒ **********
JUMP → NUMBER 3	Edit/Timbre[*]/Level Level=▒▒▒ Velo Sens=** ▶
JUMP → NUMBER 4	Edit/Timbre[*]/Pitch Coarse=▒▒ Fine=** ▶
JUMP → NUMBER 5	Edit/Timbre[*]/Vibrato Rate=▒▒ Waveform=*** ▶
JUMP → NUMBER 6	Edit/Sound/Part*/V.Rsv Voice Reserve=▒ [**]
JUMP → NUMBER 7	Edit/Sound/Part*/Output Asgn=▒▒▒ Lvl=*** Pan=**
JUMP → NUMBER 8	Edit/Setup/M.Tune Master Tune=▒▒▒▒Hz

3 DATA MODE OPERATIONS

Data mode is where you store edited settings and manage data. It includes Write functions that store your edited patch and timbre settings, Save/Load functions for RAM cards, and MIDI Dump functions.

* The "data" handled in Data mode consists of the setting values of the various parameters.

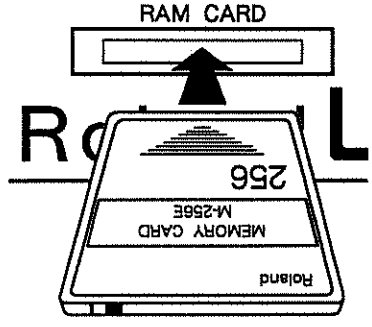
1. Using a RAM Card

Here we will explain how to use a RAM card, and the preparations necessary before using a newly purchased RAM card. Be sure to read this section before using a RAM card. (The jump function cannot be used in ROM Play mode.)

●What is a RAM Card? A RAM card is a memory card which can be read and written. Data on a RAM card can be modified as many times as you want. A RAM card can be used to store edited patch and timbre data. The U-20 uses M-256E memory cards (sold separately).

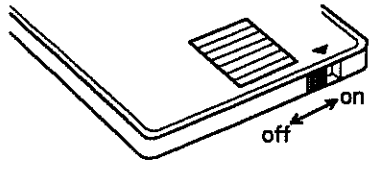
* RAM cards contain a battery to preserve the data. Before using a RAM card, be sure to install the battery as explained in the instructions for the RAM card.

●Inserting a RAM Card Insert a RAM card into the RAM card slot in the rear panel. Be sure that the RAM card is oriented correctly, and press it firmly into the slot.



* Never insert a RAM card into the PCM card slot. Leaving it inserted will cause malfunction.
* The sound may momentarily stop if you remove or insert a RAM card while playing, but this is not a malfunction.

●RAM Card Protect Switch



RAM cards have a Protect switch to ensure that the data in the RAM card is not accidentally erased. Normally you will leave this On. When storing data, switch protect On/Off with the card inserted the RAM card slot.

■Initializing a RAM Card

Before you use a newly purchased RAM card, you must Initialize (format) it to accept U-20 data. When you initialize a RAM card, all of the U-20's internal data will be copied into the RAM card.

* This operation must also be performed for a RAM card which you have previously used for a device other than the U-20.

①Insert the new RAM card into the RAM card slot, and the following message will appear. Set the RAM card Protect switch to OFF, and press [ENTER].

```
It's a New RAM Card.
Initialize it? [ENTER]
```

②Press [ENTER] once again, and the card will be initialized.

```
It's a New RAM Card.
Function Complete.
```

When RAM card initialization is complete, you will return to the previous display.

■Using a RAM Card while Playing

●Selecting RAM Card Patches (Keyboard Patches, Sound Patches)

To select RAM card Patches, press [CARD/B], and then select a patch using **BANK** [1]—[8] and **NUMBER** [1]—[8]. As when selecting internal patches, the patch or timbre will change to the RAM card selection when you specify **NUMBER.**

●Selecting RAM Card Timbres

To select RAM card Timbres, you must first select a RAM card sound patch. RAM card timbres cannot be selected for an internal sound patch. Internal timbres cannot be selected for a RAM card sound patch.
In the same way, when using RAM card chord sets and rhythm sets, you must select RAM card keyboard patches or sound patches.

* RAM card keyboard patches and sound patches cannot use internal chord sets, timbres, or rhythm sets.
* Even if a RAM card patch is selected, internal setup settings will be used. To use RAM card setup settings, you must first load them into internal memory (☞Refer to page 142, "Saving/ Loading Data".).

■ Error Messages

If an error or other unexpected condition occurs while using a RAM card, one of the following messages will appear. Take the indicated action to correct the problem.

```
Illegal PCM Card!
Please, take it out.
```

Problem : A RAM card is mistakenly inserted into the PCM card slot.
Action : Immediately remove the RAM card from the PCM card slot.

```
Data/******
RAM Card Protected.
```

Problem : Since the RAM card protect switch is ON, data cannot be written.
Action : Turn the RAM card protect switch OFF, and try again.

```
Data/******
     Card Not Ready.
```

Problem : The RAM card is not correctly inserted into the RAM card slot.
Action : Check that the RAM card is correctly inserted all the way.

```
**************************
RAM Card Verify Error!
```

Problem : When you tried to write or save RAM card data, the data was incorrectly stored.
Action : The RAM card is not correctly inserted into the RAM card slot. Re-insert the RAM card, and try the operation again.

```
It's a New RAM Card.
Initialize it? [ENTER]
```

Problem : This message will be displayed if a new RAM card is inserted, or if the card has been used by another device, or if the card is an incorrect type.
Action : Remove the card.

```
**************************
RAM Card Battery Low!
```

Problem : The battery in the RAM card is low.
Action : Change the RAM card battery.

2. Write Operations

The various Write operations are used to store edited settings by parameter group into internal or RAM card memory. To make data management easier, Exchange and Copy operations are also provided.

●Parameter groups for writing

The following groups of parameters can be written independently into memory.

Display	Parameter Group	Number of Internal Memories	Number of RAM Card Memories
Kybd	Keyboard Patches	64(I11—I88)	64(C11—C88)
Chord	Chord Sets	8(I1—I8)	8(C1—C8)
Sound	Sound Patches	64(I11—I88)	64(C11—C88)
Timbre	Timbres	128(IA11—IA88 IB11—IB88)	128(CA11—CA88, CB11—CB88)
Rhythm	Rhythm Sets	4(I1—I4)	4(C1—C4)

* There is no need to write setup settings into memory.

●Types of Write Operation

Write (Write)	Write the edited parameter group or the data of the currently selected parameter group into the specified memory number.
Write+Ren (Write + Renumber)	Write and Renumber chord sets, timbres, or rhythm sets.
Exchange (Exchange)	Exchange the edited parameter group or the currently selected parameter group with the data of the specified memory number.
Copy (Copy)	Data which has already been stored can be Copied into the specified memory number. You can perform multiple copies at once.
Copy+Ren (Copy + Renumber)	Copy and Renumber chord sets, timbres, or rhythm sets.

The Renumber function

Each sound patch specifies a timbre number for each part 1—6. This means that when an edited timbre is written into another timbre number, you may need to re-specify new timbre numbers for any sound patches which use those timbres.

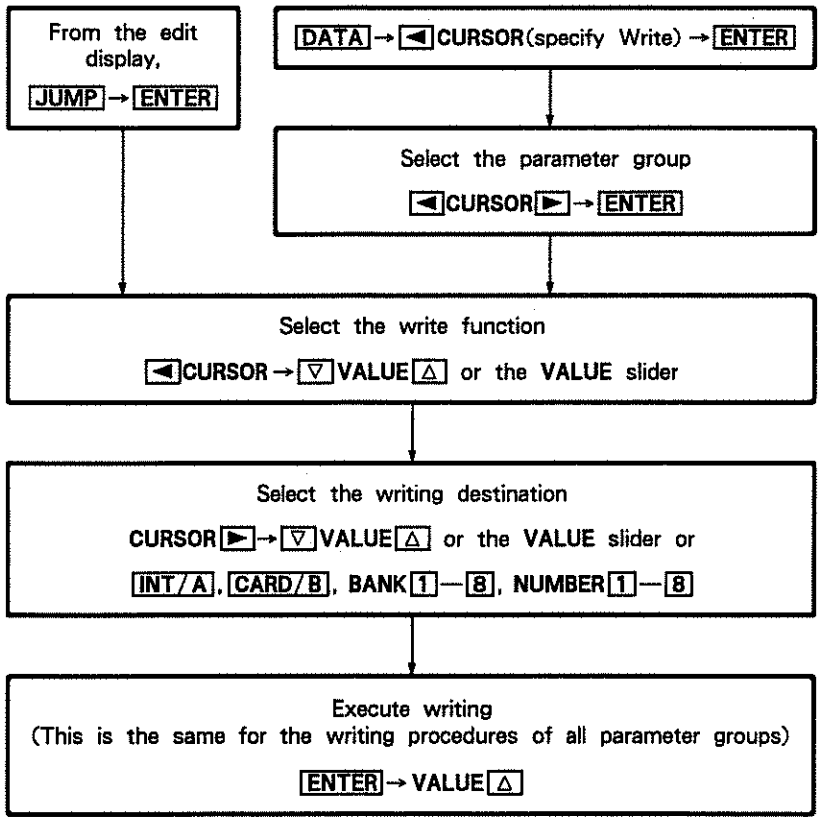
When an edited timbre is written into another timbre number, the Renumber function will automatically modify (renumber) the corresponding timbre numbers specified in each sound patch. If you use the renumber function, you will not have to re-specify timbres for each sound patch that happens to use the timbre you wrote into a new location.

Example : When you edit internal memory timbre A11 and Write + Renumber it into B63, the edited timbre will first be written into B63. Next, all internal sound patches will be searched to see if any of them specify timbre A11 for a part, and if so, they will be renumbered to B63.

The renumber function can also be used when timbre numbres change as a result of copying.

* When writing (copying) internal timbres, internal sound patches will be renumbered. For RAM card timbres, RAM card sound patches will be renumbered.
  It is not possible to write (copy) + renumber between internal and RAM card memories.
  In the same way, if you write (copy) + renumber a chord set or rhythm set, the chord set number and rhythm set number specified by each keyboard patch or sound patch will be modified after the data is written (copied).

■ Basic Writing Procedure



a. Writing a patch

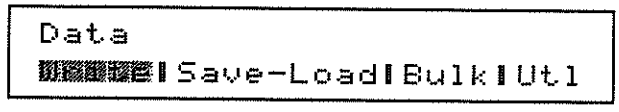
Here we will explain how to Write a keyboard patch or sound patch into memory, and also explain the Exchange and Copy functions. The writing procedure for keyboard patches and sound patches differs only in the parameter group selection. A Part Copy function is also provided for sound patches.

■ Patch Writing Procedure

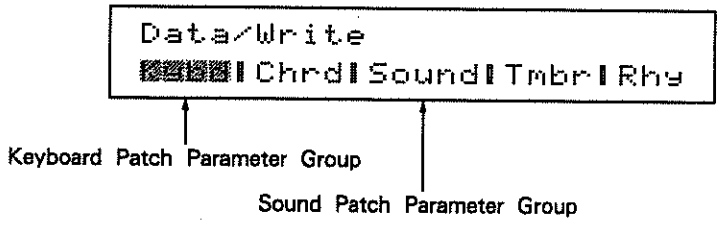
To write an edited patch into memory, use the following procedure.

* While editing a patch, you can press [JUMP]→[ENTER] to jump directly to step ④.

① Press [DATA] to enter data mode, and press [◄]CURSOR to make Write blink.

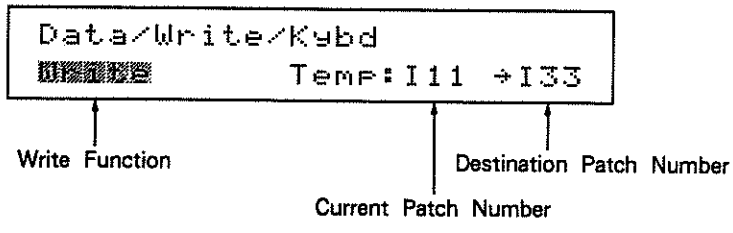


② Press [ENTER].



③ Use [◄]CURSOR[►] to make Kybd or Sound blink.

④ Press [ENTER].



⑤ Use [◄]CURSOR to make the Write function blink, and use [▽]VALUE or the VALUE slider to specify Write.

⑥ Use CURSOR[►] to make the Destination patch number blink, and use [▽]VALUE[△] or the VALUE slider to specify a patch number.

* As in play mode, the panel buttons can also be used to specify a patch number.

⑦Press [ENTER].

```
Data/Write/Kybd
Sure?  [VALUE▲] / [EXIT]
```

⑧Press VALUE [△] and writing will be executed. (To quit without writing, press [EXIT].)

```
Data/Write/Kybd
   Function Complete.
```

⑨Press a play mode button to return to play mode.

■Patch Exchange

This function exchanges the settings of the currently edited patch number with the settings of the specified destination patch number.
The Exchange function can be used to check the settings of the destination patch number. Also, by specifying the same patch number as the destination, you can compare the edited and unedited sounds.

To exchange memories, select Exchange in step ⑤ (previous page) of the patch writing procedure. Next, select the destination patch number and press [ENTER] to execute the writing operation.

```
Data/Write/Kybd
Exchange     Temp:I11↔I11
```

Write Function — Current Patch Number — Destination Patch Number

■Patch Copy

This function copies the settings of a specified range of patches into other patch numbers.

To copy memories, select Copy in step ⑤ (previous page) of the patch writing procedure. Next, select the first and last of the patch numbers you want to copy, specify the number of the first destination patch, and press [ENTER] to execute the writing operation.

```
Data/Write/Kybd
Copy          I11-I14→I21
```

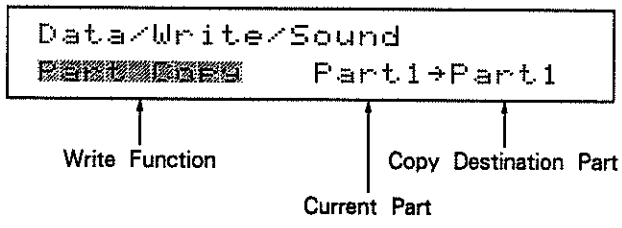
Write Function — First — Last — Number of the first destination patch

Range of patch numbers to be copied

■ Part Copy for a Sound Patch

The sound patch write functions also include a part copy function. This function copies the settings from a Part to another Part in the currently selected sound patch. This is useful when creating several Parts that have the same settings.

To use the part copy function, select Part Copy in step (5) of the sound patch writing procedure (see page 133). Next use **CURSOR** [►] to make the "copy destination part" blink, and use [▽] **VALUE** [△] to select the part. Execute the copy operation with [**ENTER**] → **VALUE** [△]. To quit without copying, press [**EXIT**].



* Use [◄] **PART** [►] to select the currently selected part.
* Copied part settings are temporary. If you want to keep the copied settings, write the sound patch into memory.

b. Writing a timbre

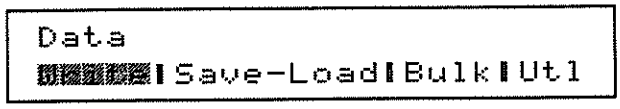
Here we will explain how to Write a timbre into memory, and the procedure for Exchange and Copy. The steps are essentially the same as when writing a patch.

■ Timbre Writing Procedure

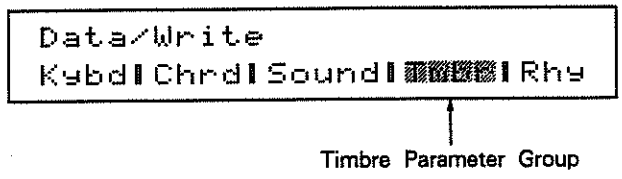
To write an edited timbre into memory, use the following procedure.

* While editing a timbre, you can press [JUMP]→[ENTER] to jump directly to step ③.

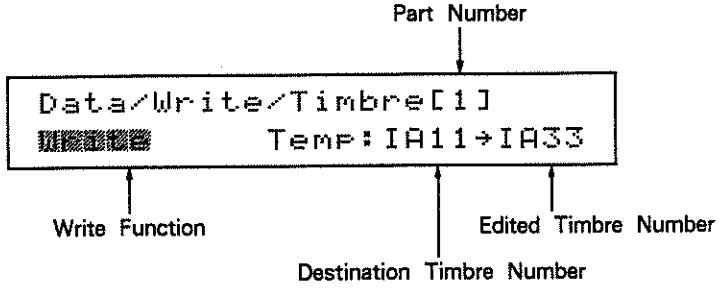
①Press [DATA] to enter data mode, and press [◄]CURSOR to make Write blink.



②Press [ENTER].



③Use [◄]CURSOR[►] to make Tmbr blink, and press [ENTER].



④Use [◄]CURSOR to make the Write function blink, and use [▽]VALUE or the VALUE slider to specify Write.

⑤Use [◄]PART[►] to specify the part whose timbres you want to write.

⑥Use CURSOR[►] to make the Destination timbre number blink, and use [▽]VALUE[△] or the VALUE slider to specify a timbre number.

* As when in play mode, a timbre number can also be specified using the panel buttons.

⑦ **Press ENTER.**

```
Data/Write/Timbre[1]
Sure?  [VALUE▲] / [EXIT]
```

⑧ **Press VALUE △ and writing will be executed. (To quit without writing, press EXIT.)**

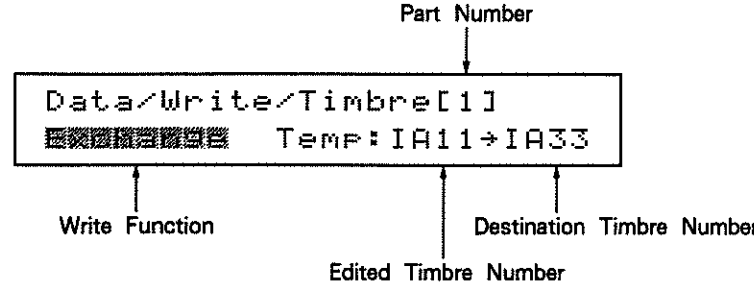
```
Data/Write/Timbre[1]
   Function Complete.
```

⑨ **Press a play mode button to return to play mode.**

■ Timbre Exchange

This function exchanges the currently edited timbre settings with the settings of a specified destination timbre. The Exchange function can be used to check the settings of the destination timbre number. Also, by specifying the same timbre number as the destination, you can compare the edited and unedited timbres.

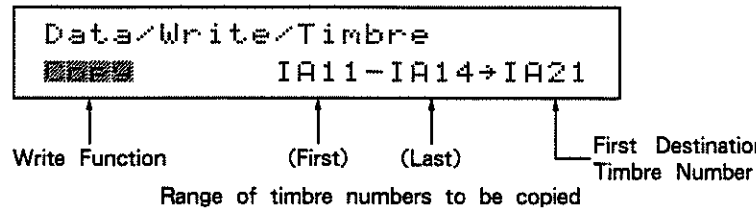
When exchanging, select Exchange in step ④ (previous page) of the timbre writing procedure. Next, select the destination timbre number and press ENTER to execute the writing operation.



■ Timbre Copy

This function copies the settings of a specified range of timbres into other timbre numbers.

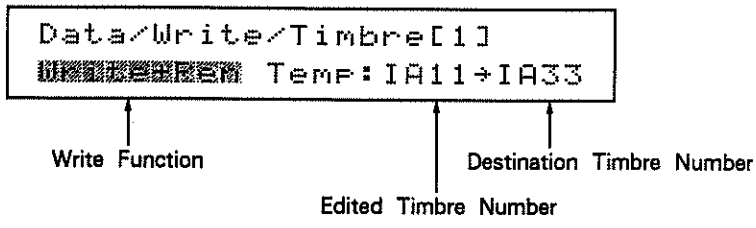
When copying, select Copy in step ④ (previous page) of the timbre writing procedure. Next, select the first and last of the timbre numbers you want to copy, specify the number of the first destination timbre. Press ENTER to execute the writing operation.



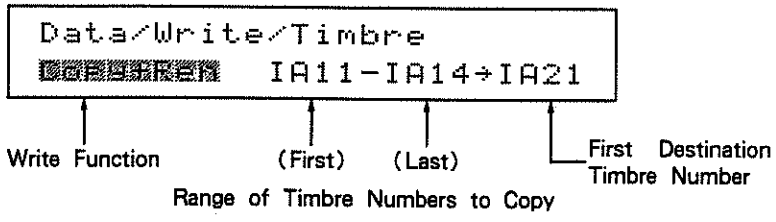
■ Write + Renumber/Copy + Renumber

The Renumber functions allow you automatically renumber the timbres used by each sound patch at the same time that you store an edited timbre into another timbre number.
This is very convenient when you want to renumber the timbre numbers specified in each sound patch so that the newly written timbres will be used.
It is also possible to automatically renumber when Copying.

To write and renumber, select Write + Ren in step ④ of the timbre write procedure. The remaining steps are the same as when writing.



To copy and renumber, select Copy + Ren. The remaining steps are the same as when copying.



* When writing (copying) internal timbres, internal sound patches will be renumbered. When writing (copying) RAM card timbres, RAM card sound patches will be renumbered.
  It is not possible to write (copy) + renumber data between internal and RAM card memory.

c. Writing chord sets/rhythm sets

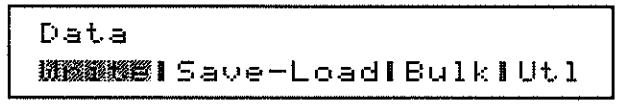
Here we will explain the writing procedure for chord sets and rhythm sets, and the exchange and copy functions. The procedure is essentially the same as for timbre writing.

■Chord Set/Rhythm Set Write Procedure

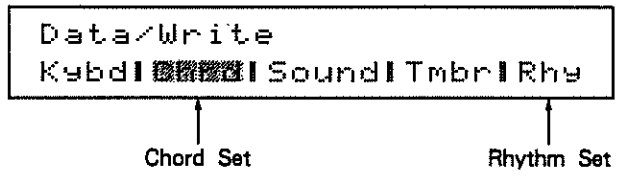
To store edited chord sets/rhythm sets, use the following procedure.

* While editing a chord set/rhythm set, you can press [JUMP]→[ENTER] to jump directly to the display of step ③.

①Press [DATA] to enter data mode, and use [◄]CURSOR to select Write.

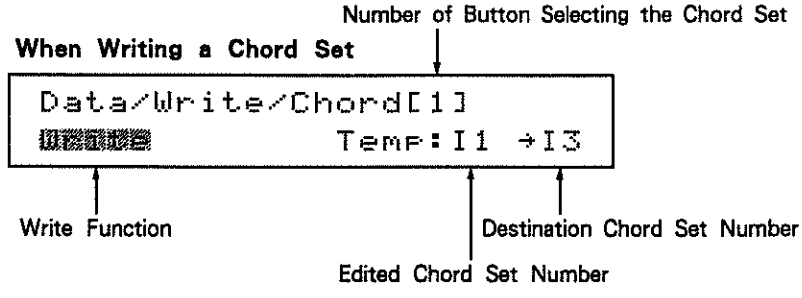


②Press [ENTER].



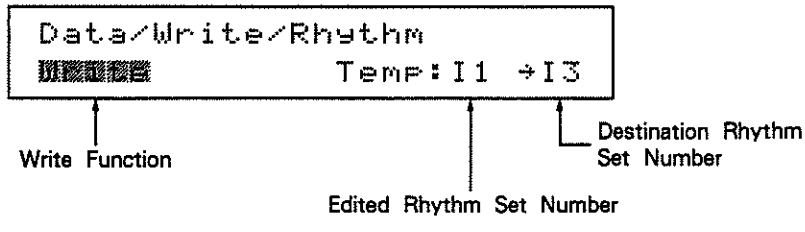
③Use [◄]CURSOR[►] to select either Chrd or Rhy, and press [ENTER].

When Writing a Chord Set



Use [CHORD 1] or [CHORD 2] to specify the button whose chord set you want to store.

When Writing a Rhythm Set



④ Use ◄ CURSOR to make the Write function blink, and use ▽ VALUE or the VALUE slider to specify Write.

⑤ Use CURSOR ► to make the Destination number blink, and use ▽ VALUE △ or the VALUE slider to select a number.
(Chord set : I1—I8, C1—C8 Rhythm set : I1—I4, C1—C4)

* You can also use **INT/A**, **CARD/B**, **NUMBER 1—8** (**NUMBER 1—4** for rhythm sets) to select.

⑥ Press ENTER.

```
Data/Write/****
Sure?  [VALUE▲] / [EXIT]
```

⑦ Press VALUE △, and writing will be executed. (To quit without writing, press EXIT.)

```
Data/Write/****
   Function Complete.
```

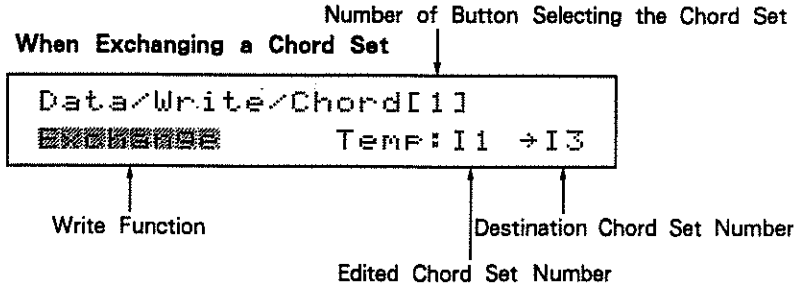
⑧ Press a play mode button to return to play mode.

■ Exchange Chord Set/Rhythm Set

This function exchanges the settings of the currently edited chord (rhythm) set number with the settings of the specified destination chord set number.
This Exchange function can be used to check the settings of the destination chord (rhythm) set number. Also, by specifying the same chord set number as the destination, you can compare the edited and unedited chord (rhythm) sets.

When exchanging, select Exchange in step ④ writing procedure explained above. Next, select the destination chord (rhythm) set number and press **ENTER** execute the writing operation.

When Exchanging a Chord Set

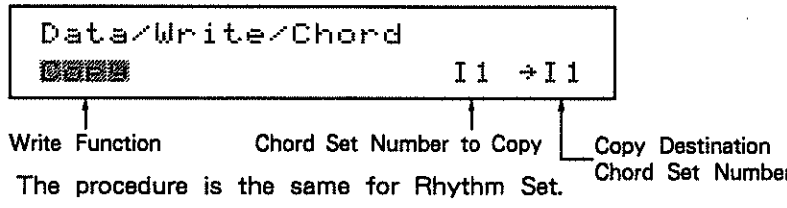


■ Copy Chord Set/Rhythm Set

This function will Copy a chord (rhythm) set from memory into another chord (rhythm) set number. The same is possible for a rhythm set.

To copy, select Copy in step ④ of the writing procedure (previous page). Next, select the chord (rhythm) set to be copied, and the copy destination chord (rhythm) set number. Press [ENTER] to write the data into memory.

When Copying a Chord Set



The procedure is the same for Rhythm Set.

■ Write + Renumber/Copy + Renumber

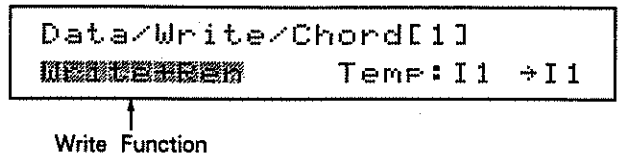
When the Renumber + Write function is used, the currently edited chord set will be written into another chord set number, and at the same time, each Keyboard Patch which uses that Chord Set will be renumbered to use the newly written Chord Set.

This function is convenient when you want to rewrite the chord set numbers of each patch along with chord set settings. This Renumber function can also be used with the Copy operation.

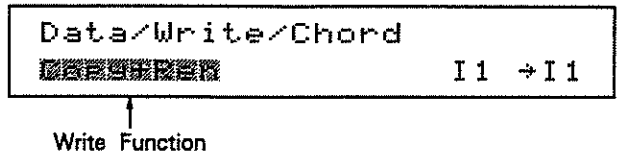
Using the Renumber + Write function to write a rhythm set will cause the Sound Patch numbers to be renumbered.

When renumbering with the Write operation, select Write + Ren in step ④ of the chord (rhythm) set writing procedure. The remaining steps are the same as when using the Write operation.

When Renumbering a Chord Set



When renumbering with the Copy operation, select Copy + Ren. The remaining steps are the same as when using the Copy operation.



* When you Write (Copy) + Renumber an internal chord set, internal keyboard patches will be renumbered. For RAM card chord sets, RAM card keyboard patches will be renumbered. It is not possible to Write (Copy) + Renumber data between internal and RAM card memory.

3. Saving/Loading Data

Save and Load functions are used to transfer groups of data between internal memory and a RAM card.

●Data Groups for Saving/Loading

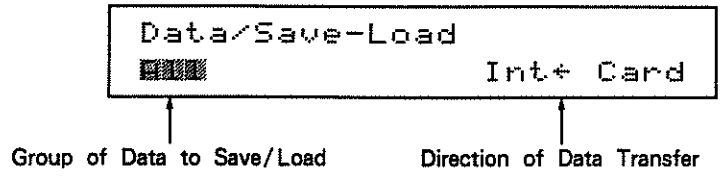
Display	Save/Load
All	All data in memory (setup, 64 keyboard patches, 8 chord sets, 64 sound patches, 128 timbres, 4 rhythm sets)
Setup	All setup data
Kybd+Chord	64 keyboard patches, 8 chord sets
Chord	8 chord sets
Sound+Tmbr+Rhy	64 sound patches, 128 timbres, 4 rhythm sets
Timbre	128 timbres
Rhythm Set	4 rhythm sets

●Save/Load Data Transfer

Display	Save/Load
Int← Card	Copy RAM card data to internal memory (Load)
Int →Card	Copy internal memory data to RAM card (Save)
Int←→Card	Exchange internal memory data and RAM card data (Exchange)

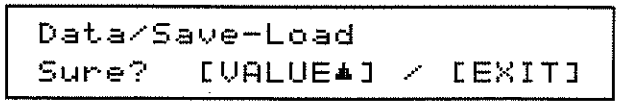
■Save/Load Procedure

①[JUMP]→[EXIT]



②Use [◀]CURSOR[▶] to select the item, and use [▽]VALUE[△] or the VALUE slider to specify the parameter group, and how the data will be saved or loaded.

③[ENTER]



④If you are sure you want to save or load the data, press VALUE[△]. (To quit without saving or loading, press [EXIT].)

⑤Press a play mode select button to return to play mode.

4. Data Transfer Using MIDI (Dump)

The Dump function allows you to transmit U-20 memory data as a MIDI System Exclusive message that can be received and stored by another MIDI device.

Using the Dump function, you can store U-20 data into a sequencer, or transfer identical memory settings into another U-20. By recording U-20 data into a sequencer as part of a sequence recording, the memory data will be transmitted as part of the sequence playback, so that the U-20 being controlled by the sequencer will use the same memory settings as when the sequencer recording was made.

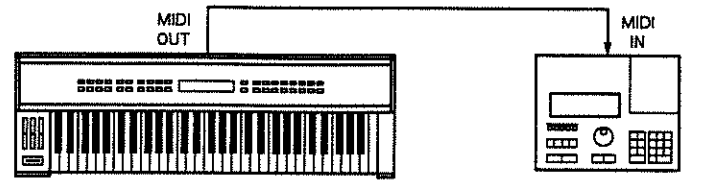
●Transmission

Transmission Method	Transmitted Data	Transmitted in which Mode
Bulk Dump	Transmit Internal or RAM Card Data by Individual Group	Data Mode
Patch Dump	Transmit All Data of the Selected Patch	Play Mode
Parameter Dump	Transmit the Data Indicated by the Blinking	Edit Mode

* The Patch Dump function cannot be used in Part Play mode, Rhythm Play mode, or ROM Play mode.

■ Connections

Data is transmitted in one direction (one-way transmission) Make MIDI connections as follows.



U-20 Sequencer or other U-20

■Device ID

When receiving and transmitting Exclusive messages, the Device IDs of the two devices must match (☞page 178, "MIDI Implementation"). If the device ID of the incoming message does not match the device ID of the receiving device, the incoming message will be ignored.

①[JUMP]→BANK[1]→[◀]CURSOR[▶](select the next display)

```
Edit/Setup/MIDI/Common
◀  SysEx Device ID=▒▒  ▶
```

②Use [▽]VALUE[△] or the VALUE slider to set the Device ID.

③Press one of the play mode select buttons to return to play mode.

■When Receiving Exclusive Messages

For exclusive messages to be received, the Exclusive Reception switch must be On. If the Exclusive Reception switch is On, exclusive messages can be received at any time.

①[JUMP]→BANK[1]→CURSOR[▶](select the next display)

```
Edit/Setup/MIDI/Common
◀      Rx SysEx = ▒▒
```

②Use [▽]VALUE[△] or the VALUE slider to turn the Exclusive Reception switch On.

While an exclusive message is being received, the following display will appear. (If the received exclusive message is very short, the display will not appear.)

```
Receiving Exclusive
```

*While an exclusive message is being received, other operations will be slowed down. For this reason, you will normally leave this setting Off.

a. Data transmission by group (bulk dump)

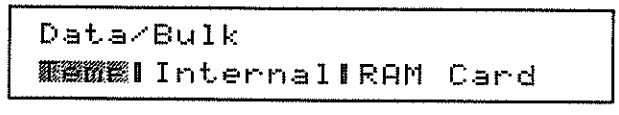
The Bulk Dump function can be used to transmit selected groups of data from internal memory or RAM card to an external device such as a sequencer or another U-20.

●Data Groups for Transmission

Type of Data	Data Group	Transmitted Data
Temp (all currently selected data)	All	All currently selected data (keyboard patch, chord 1/2, sound patch, timbres assigned to parts 1—6, rhythm set)
	Keyboard Patch	The currently selected keyboard patch
	Chord[1]	The chord set of chord 1
	Chord[2]	The chord set of chord 2
	Sound Patch	The currently selected sound patch
	Timbre[1]	The timbre assigned to part 1
	:	:
	Timbre[6]	The timbre assigned to part 6
	Timbre[1-6]	The timbres assigned to parts 1—6
	Rhythm Set	The rhythm set assigned to the rhythm part
Internal (data in internal memory)	All	All data in internal memory (setup, 64 keyboard patches, 8 chord sets, 64 sound patches, 128 timbres, 4 rhythm sets)
	Setup	Setup
	Keyboard Patch	64 keyboard patches
	Chord	8 chord sets
	Sound Patch	64 sound patches
	Timbre	128 timbres
	Rhythm Set	4 rhythm sets
RAM Card	Card All	All data in the RAM card

■Bulk Dump Procedure

①[DATA]→[◀]CURSOR[▶] (select Bulk)→[ENTER]



②[◀]CURSOR[▶] (select the type of data to transmit)→[ENTER]

③Use [▽]VALUE[△] or the VALUE slider to select the data group to transmit.

④Press [ENTER] and the data will be transmitted. (If the transmitted exclusive message is very short, no display will appear.)

⑤Press a play mode select button to return to play mode.

b. Patch Dump

When the Patch Dump switch is On, selecting a patch from the front panel ([INT/A], [CARD/B], **BANK** [1]—[8], **NUMBER** [1]—[8]) will transmit the data of the selected patch.

●Transmitted Data

Play Mode	Transmitted Data
Keyboard Patch Mode	Keyboard patch, chord sets assigned to chords 1 and 2
Sound Patch Mode	Sound patch, timbres assigned to parts 1—6, rhythm set assigned to the rhythm part
Link Play Mode	Both keyboard patch and sound patch data (including the assigned chord set, timbres, and rhythm set)

■Patch Dump Procedure

①[JUMP]→BANK[1]→[◀]CURSOR[▶] (select the next display)

```
Edit/Setup/MIDI/Common
◀  SysEx Patch Dump=[ ]  ▶
```

②Press VALUE[△] to turn the Patch Dump switch On.

③Return to play mode.

④When you select a patch from the front panel, the data of the selected patch will be transmitted.

* Patch data will not be transmitted when a patch is selected in response to a program change message from an external device, or when you use [▽]**VALUE**[△] to select patches.
* When Patch Dump is used, patch selection will be slightly slower. For this reason, you should normally leave the Patch Dump switch Off.
* Data will not be transmitted in part play mode, rhythm play mode, or ROM play mode.

C. Transmitting data of the specified parameter (parameter dump)

While editing, you can press [ENTER] to transmit the value of the currently selected (blinking) parameter.

(Example)

```
Edit/Sound/Part1/Output
Asgn=Rev Lvl=[127] Pan=><
```

For example, if you press [ENTER] from this display, the volume level of part 1 (127) will be transmitted.

5. Utilities

In addition to the Write and Data Transfer functions already explained, data mode includes Initialization and MIDI Monitor functions.

a. Initialize (Data / Util / Initialize)

This function initializes (restores to a basic setting) the currently selected data.

* Only the currently selected keyboard patch or sound patch will be initialized. Data already written into internal memory or RAM card will not be affected.
* The initialized values of each parameter group are shown in the supplementary material at the end of this manual.

●Data Groups for Initialization

Display	Initialized Data
All	All currently selected data (page memory, setup, keyboard patch, chord 1/2, sound patch, timbre assigned to parts 1—6, rhythm set)
Jump Page	The jump destination displays assigned to the BANK and NUMBER buttons
Setup	All setup data
Kybd Patch	All data of the currently selected keyboard patch
Chord[1]	The chord set assigned to chord 1
Chord[2]	The chord set assigned to chord 2
Sound Patch	All data of the currently selected sound
Part1	All data of part 1
:	:
Part6	All data of part 6
Rhythm Part	All data of rhythm part
Timbre[1]	The timbre assigned to part 1
:	:
Timbre[6]	The timbre assigned to part 6
Timbre[1-6]	The timbres assigned to parts 1—6
Rhythm Set	The rhythm set assigned to the rhythm part

■ Initialization Procedure

①[DATA]→CURSOR[►](select Utl)

②[ENTER]→[◄]CURSOR (select Initialize)

③[ENTER]

```
Data/Utl/Initialize
Initialize
```

④Use [▽]VALUE[△] to select the data group to initialize (refer to the following chart).

⑤[ENTER]

```
Data/Utl/Initialize
Sure?  [VALUE▲] / [EXIT]
```

⑥If you are sure you want to initialize the data, press VALUE[△]. (To quit without initializing, press [EXIT].)

```
Data/Utl/Initialize
   Function Complete.
```

↓ and in a short time,

```
Data/Utl/Initialize
Initialize
```

⑥Press any play mode select button to return to play mode.

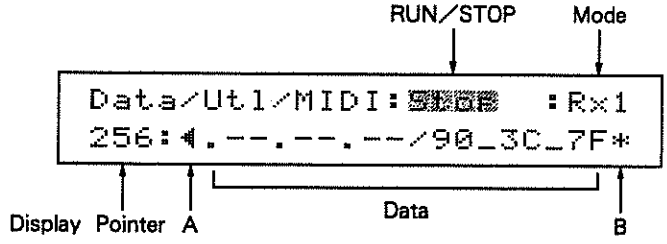
b. MIDI Monitor (Data/Util/MIDI Monitor)

The MIDI Monitor function allows you to view data transmission/reception between the U-20 and external MIDI devices.
The MIDI Monitor puts the data received from MIDI IN or the data transmitted from MIDI OUT into a monitoring buffer, and displays it in hexadecimal form. The buffer can hold 256 bytes, and new data will overwrite the old data.

①[DATA]→CURSOR[►](select Util)

②[ENTER]→CURSOR[►](select MIDI Monitor)

③[ENTER](the MIDI Monitor display appears)



In the MIDI Monitor display, the following parameters will determine how MIDI data is monitored.

●RUN/STOP

While this is set to RUN, data will be received into the monitor buffer, and will continue to be received even if you move to another display. When this is set to STOP, data reception will stop.

④Use [◄]CURSOR to make the RUN/STOP indication blink.

⑤Press VALUE[△] for RUN, press [▽]VALUE for STOP.

●Mode (Rx1, Rx2, Tx)

This determines how data will be received into the monitor buffer.

Rx1 : All incoming MIDI data will be monitored
Rx2 : All incoming MIDI data except for realtime messages will be monitored
Tx : All transmitted MIDI data will be monitored

④Use CURSOR[►] to make the mode indication blink.

⑤Use [▽]VALUE[△] to select the monitoring mode.

* When you change the monitoring mode, all data in the buffer will be cleared.
* Realtime messages are used mainly to synchronize sequencers and rhythm machines. Active sensing is included in realtime messages.

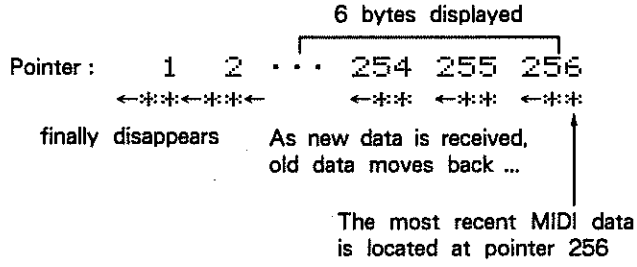
■ About the Display

●Display Pointer

The display pointer indicates the position in the data buffer occupied by the currently displayed data. A display pointer of 256 indicates the most recently received data.

* If new data is received during RUN, the display pointer will automatically be set to 256.

You can use [◄] PART [►] to move the display pointer and scroll through the entire data buffer to see the data that was previously received.



●Data

MIDI data is displayed in hexadecimal notation. "— —" indicates that MIDI data has not yet been received. One of the following symbols will be displayed in front of each MIDI data byte to indicate the type of data.

_ : 00—7F, F7 (data bytes, EOX)
/ : 80—F6 (status bytes)
. : F8—FE (realtime messages)

●A, B

"◀" or "▶" indicate that data exists in the buffer before or after the displayed data. Immediately after MIDI data is received, B will show "*".

* When the power is turned on, the monitor buffer will be empty, and the monitor will be set to STOP.

SUPPLEMENTARY MATERIAL

1. Error and other Messages

If there has been some mistake in operation, or if it was not possible to correctly execute the specified operation, an error message will appear in the display. A message will also appear on other occasions when some unusual condition occurs. Determine what the problem is, and take the appropriate action.

●When the power is turned on

```
Internal Battery Low!
```

Problem :
The internal backup battery has run down.
Action :
Contact a Roland service station.

●When using a RAM card or PCM card

```
Checking PCM Card...
```

When you insert or remove a PCM card, this message will appear and operation will briefly halt. (This is normal.)

```
It's a New RAM Card.
Initialize it? [ENTER]
```

Problem :
The RAM card inserted into the RAM card slot has not been initialized for use by the U-20.
Action 1 :
If the RAM card is new or if you want to use a RAM card from another device for the U-20, press [ENTER]. The RAM card will be initialized, and internal memory data will be written into it. Please use M-256E RAM cards.
Action 2 :
If you have mistakenly inserted the wrong card, remove it immediately.

```
Data/*****
  RAM Card Protected.
```

Problem :
The protect switch of the RAM card is On, and writing is not possible.
Action :
Turn the protect switch of the RAM card Off, and try the operation again.

```
Data/*****
    Card Not Ready.
```

```
Data/*****
 RAM Card Verify Error!
```

Problem :
When writing, saving or loading, the data was not correctly written into the RAM card.
Action :
Make sure that the RAM card is correctly inserted, and try the operation again.

```
RAM Card Battery Low!
```

Problem :
The battery of the RAM card has run down.
Action :
Replace the battery according to the instructions in the RAM card manual.

```
Illegal PCM Card!
Please, take it out.
```

Problem :
The card inserted into the PCM card slot is not a PCM card.
Action :
Immediately remove the card from the PCM card slot.

●When using external MIDI devices

```
Receiving Exclusive.
```

Cause :
Exclusive data is being received. (If the exclusive data being received is very short, this message will not appear.)
Action :
Wait until reception ends.

```
Transmitting Exclusive.
```

Cause :
Exclusive data is being transmitted. (If the exclusive data being transmitted is very short, this message will not appear.)
Action :
When transmission ends, the display will show "Function Complete", and then return to the previous display.

```
SysEx Check Sum Error!
```

```
SysEx Data Length Error!
```

Problem :
System exclusive data was incorrectly received.
Action :
Check MIDI cables and the message that was transmitted, and try the operation again.

●When in Data Mode (other than the above)

```
Data/******
Sure?  [VALUE▲] / [EXIT]
```

Cause :
This message will always be displayed when you write data into internal memory or a RAM card.
Action 1 :
If you are sure you want to write the data into memory, press **VALUE** [△].
Action 2 :
To quit without writing data into memory, press **EXIT**.

```
Data/******
  Function Complete.
```

Cause :
The write, save, or load operation has been completed.
Action :
Wait for a short time until the previous display appears.

2. Troubleshooting

■No sound or not enough volume

●No sound or not enough volume in ROM play mode

○Is **VOLUME** too low?
Adjust the volume settings of the U-20 and the mixer/amp system.

○Are the outputs connected correctly?
If you hear sound in the headphones, the problem is probably in the amp or cable. Check the connections.

●No sound or not enough volume in modes other than ROM play

○Are the key range and velocity range settings correct for each Part?
(☞page 95)

○Are the Part or Timbre levels too low?
(☞page 51, 61)

○Has control change data been received from external MIDI devices or controllers, causing Part level or Timbre level settings to be lowered?
Select (or re-select) a Sound Patch.

○Is the PCM card containing the specified tone inserted correctly?
(☞page 60)

●No sound or not enough volume in Link Play, Keyboard Patch, or Sound Patch modes

○Does the Tx channel of the keyboard match the Tx channel of each Part?
Check these settings in the sub-display of Sound Patch mode.
(☞page 122)

○Is local control turned Off?
(☞page 108)

■ Pitch is incorrect

○Is the keyboard transposed?
(☞page 29)

○Is the master tuning incorrect?
(☞page 23)

○Is the pitch shift setting for each Timbre incorrect?
(☞page 63)

○Has pitch bender data been received, leaving the pitch "hanging" at some non-zero value?
Move the bender lever slight, and the pitch will return to normal.

■ Sounds are not selected as you expect

○Is the correct play mode selected?
To select Sound Patches, you must be in Link Play mode or Sound Patch mode. To select Timbres, you must be in Part Play mode.

○Are you in Edit mode or Data mode?
Press a play mode select button to enter play mode.

○Is the Patch Dump switch On?
If the Patch Dump switch is On, Patch changes will be slightly slower. Normally you will leave this switch Off.
(☞page 107)

■ MIDI data from a sequencer is not received correctly

○Is the Rx channel of each Part set correctly?
Check these settings in the sub-display of Sound Patch mode.
(☞page 122)

○Are the key range and velocity range of each Part set correctly?
(☞page 95)

○Is the voice reserve function set appropriately?
(☞page 117)

1 : Standard Set

A standard drum set.

2 : Dry Set

The output assign of drums for all keys is "Dry" (no effect).

3 : Electric Set

A drum set with mainly electric toms and gated snare drums.

4 : F.X. Set

A drum set with mainly sound effects.

★ : Mute Setting

Key	Instrument	Mute
F # 2 (42)	Closed H.H 1	A # 2
G # 2 (44)	Open H.H 2	A # 2
A # 2 (46)	Open H.H 1	G # 2
E5 (76)	Guiro 2	F5
F5 (77)	Guiro 1	E5

☆ : PCM card tones are assigned to these keys. A PCM card (SN-U110-02) must beinserted. (Common to all Rhythm Sets 1—4).

Roland Exclusive Messages

1. Data Format for Exclusive Messages

Roland's MIDI implementation uses the following data format for all exclusive messages (type IV) :

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
CMD	Command ID
[BODY]	Main data
F7H	End of exclusive

MIDI status : F0H, F7H

An exclusive message must be flanked by a pair of status codes, starting with a Manufacturer – ID immediately after F0H (MIDI version1.0).

Manufacturer – ID : 41H

The Manufacturer – ID identifies the manufacturer of a MIDI instrument that triggers an exclusive message. Value 41H represents Roland's Manufacturer – ID.

Device – ID : DEV

The Device – ID contains a unique value that identifies the individual device in the multiple implementation of MIDI instruments. It is usually set to 00H – 0FH, a value smaller by one than that of a basic channel, but value 00H – 1FH may be used for a device with multiple basic channels.

Model – ID : MDL

The Model – ID contains a value that uniquely identifies one model from another. Different models, however, may share an identical Model – ID if they handle similar data.

The Model – ID format may contain 00H in one or more places to provide an extended data field. The following are examples of valid Model – IDs, each representing a unique model :

01H
02H
03H
00H, 01H
00H, 02H
00H, 00H, 01H

Command – ID : CMD

The Command – ID indicates the function of an exclusive message. The Command – ID format may contain 00H in one or more places to provide an extended data field. The following are examples of valid Command – IDs, each representing a unique function :

01H
02H
03H
00H, 01H
00H, 02H
00H, 00H, 01H

Main data : BODY

This field contains a message to be exchanged across an interface. The exact data size and contents will vary with the Model – ID and Command – ID.

2. Address – mapped Data Transfer

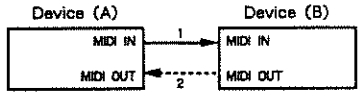
Address mapping is a technique for transferring messages conforming to the data format given in Section 1. It assigns a series of memory – resident records – – waveform and tone data, switch status, and parameters, for example – – to specific locations in a machine – dependent address space, thereby allowing access to data residing at the address a message specifies.

Address – mapped data transfer is therefore independent of models and data categories. This technique allows use of two different transfer procedures : one – way transfer and handshake transfer.

One – way transfer procedure (See Section 3 for details.)

This procedure is suited for the transfer of a small amount of data. It sends out an exclusive message completely independent of a receiving device status.

Connection Diagram

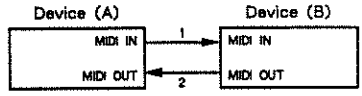


Connection at point 2 is essential for "Request data" procedures. (See Section 3.)

Handshake – transfer procedure (See Section 4 for details.)

This procedure initiates a predetermined transfer sequence (handshaking) across the interface before data transfer takes place. Handshaking ensures that reliability and transfer speed are high enough to handle a large amount of data.

Connection Diagram



Connection at points 1 and 2 is essential.

Notes on the above two procedures

*There are separate Command – IDs for different transfer procedures.
*Devices A and B cannot exchange data unless they use the same transfer procedure, share identical Device – ID and Model ID, and are ready for communication.

3. One – way Transfer Procedure

This procedure sends out data all the way until it stops and is used when the messages are so short that answerbacks need not be checked.
For long messages, however, the receiving device must acquire each message in time with the transfer sequence, which inserts intervals of at least 20 milliseconds in between.

Types of Messages

Message	Command ID
Request data 1	RQ1 (11H)
Data set 1	DT1 (12H)

Request data # 1 : RQ1 (11H)

This message is sent out when there is a need to acquire data from a device at the other end of the interface. It contains data for the address and size that specify designation and length, respectively, of data required.
On receiving an RQ1 message, the remote device checks its memory for the data address and size that satisfy the request.

If it finds them and is ready for communication, the device will transmit a "Data set 1 (DT1)" message, which contains the requested data. Otherwise, the device will send out nothing.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
11H	Command ID
aaH	Address MSB
⋮	⋮
	LSB
ssH	Size MSB
⋮	⋮
	LSB
sum	Check sum
F7H	End of exclusive

*The size of the requested data does not indicate the number of bytes that will make up a DT1 message, but represents the address fields where the requested data resides.

*Some models are subject to limitations in data format used for a single transaction. Requested data, for example, may have a limit in length or must be divided into predetermined address fields before it is exchanged across the interface.

*he same number of bytes comprises address and size data, which, however, vary with the Model – ID.

*The error checking process uses a checksum that provides a bit pattern where the least significant 7 bits are zero when values for an address, size, and that checksum are summed.

Data set 1 : DT1 (12H)

This message corresponds to the actual data transfer process. Because every byte in the data is assigned a unique address, a DT1 message can convey the starting address of one or more data as well as a series of data formatted in an address – dependent order.

The MIDI standards inhibit non – real time messages from interrupting an exclusive one. This fact is inconvenient for the devices that support a "soft – through" mechanism. To maintain compatibility with such devices, Roland has limited the DT1 to 256 bytes so that an excessively long message is sent out in separate segments.

Byte	Description
F0H	Exclusive
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
12H	Command ID
aaH	Address MSB
	LSB
ddH	Data
sum	Check sum
F7H	End of exclusive

*A DT1 message is capable of providing only the valid data among those specified by an RQ1 message.

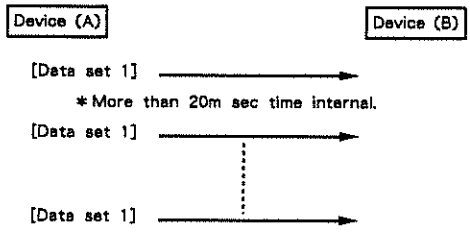
*Some models are subject to limitations in data format used for a single transaction. Requested data, for example, may have a limit in length or must be divided into predetermined address fields before it is exchanged across the interface.

*The number of bytes comprising address data varies from one Model – ID to another.

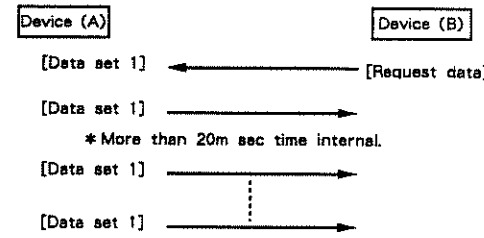
*The error checking process uses a checksum that provides a bit pattern where the least significant 7 bits are zero when values for an address, size, and that checksum are summed.

Example of Message Transactions

●Device A sending data to Device B
Transfer of a DT1 message is all that takes place.



●Device B requesting data from Device A
Device B sends an RQ1 message to Device A. Checking the message, Device A sends a DT1 message back to Device B.



4. Handshake – Transfer Procedure

Handshaking is an interactive process where two devices exchange error checking signals before a message transaction takes place, thereby increasing data reliability. Unlike one – way transfer that inserts a pause between message transactions, handshake transfer allows much speedier transactions because data transfer starts once the receiving device returns a ready signal.

When it comes to handling large amounts of data – – sampler waveforms and synthesizer tones over the entire range, for example – – across a MIDI interface, handshaking transfer is more efficient than one – way transfer.

Types of Messages

Message	Command ID
Want to send data	WSD (40H)
Request data	RQD (41H)
Data set	DAT (42H)
Acknowledge	ACK (43H)
End of data	EOD (45H)
Communication error	ERR (4EH)
Rejection	RJC (4FH)

Want to send data : WSD (40H)

This message is sent out when data must be sent to a device at the other end of the interface. It contains data for the address and size that specify designation and length, respectively, of the data to be sent.

On receiving a WSD message, the remote device checks its memory for the specified data address and size which will satisfy the request. If it finds them and is ready for communication, the device will return an "Acknowledge (ACK)" message.
Otherwise, it will return a "Rejection (RJC)" message.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
40H	Command ID
aaH	Address MSB
	LSB
ssH	Size MSB
	LSB
sum	Check sum
F7H	End of exclusive

*The size of the data to be sent does not indicate the number of bytes that make up a "Data set (DAT)" message, but represents the address fields where the data should reside.
*Some models are subject to limitations in data format used for a single transaction. Requested data, for example, may have a limit in length or must be divided into predetermined address fields before it is exchanged across the interface.
*The same number of bytes comprises address and size data, which, however, vary with the Model – ID.
*The error checking process uses a checksum that provides a bit pattern where the least significant 7 bits are zero when values for an address, size, and that checksum are summed.

Request data : RQD (41H)

This message is sent out when there is a need to acquire data from a device at the other end of the interface. It contains data for the address and size that specify designation and length, respectively, of data required.

On receiving an RQD message, the remote device checks its memory for the data address and size which satisfy the request. If it finds them and is ready for communication, the device will transmit a "Data set (DAT)" message, which contains the requested data. Otherwise, it will return a "Rejection (RJC)" message.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
41H	Command ID
aaH	Address MSB
⋮	⋮
	LSB
ssH	Size MSB
⋮	⋮
	LSB
sum	Check sum
F7H	End of exclusive

*The size of the requested data does not indicate the number of bytes that make up a "Data set (DAT)" message, but represents the address fields where the requested data resides.

*Some models are subject to limitations in data format used for a single transaction. Requested data, for example, may have a limit in length or must be divided into predetermined address fields before it is exchanged across the interface.

*The same number of bytes comprises address and size data, which, however, vary with the Model – ID.

*The error checking process uses a checksum that provides a bit pattern where the least significant 7 bits are zero when values for an address, size, and that checksum are summed.

Data set : DAT (42H)

This message corresponds to the actual data transfer process. Because every byte in the data is assigned a unique address, the message can convey the starting address of one or more data as well as a series of data formatted in an address – dependent order.

Although the MIDI standards inhibit non – real time messages from interrupting an exclusive one, some devices support a "soft – through" mechanism for such interrupts. To maintain compatibility with such devices, Roland has limited the DAT to 256 bytes so that an excessively long message is sent out in separate segments.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
42H	Command ID
aaH	Address MSB
⋮	⋮
	LSB
ddH	Data
⋮	⋮
sum	Check sum
F7H	End of exclusive

*A DAT message is capable of providing only the valid data among those specified by an RQD or WSD message.

*Some models are subject to limitations in data format used for a single transaction. Requested data, for example, may have a limit in length or must be divided into predetermined address fields before it is exchanged across the interface.

*The number of bytes comprising address data varies from one model ID to another.

*The error checking process uses a checksum that provides a bit pattern where the least significant 7 bits are zero when values for an address, size, and that checksum are summed.

Acknowledge : ACK (43H)

This message is sent out when no error was detected on reception of a WSD, DAT, "End of data (EOD)", or some other message and a requested setup or action is complete. Unless it receives an ACK message, the device at the other end will not proceed to the next operation.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
43H	Command ID
F7H	End of exclusive

End of data : EOD (45H)

This message is sent out to inform a remote device of the end of a message. Communication, however, will not come to an end unless the remote device returns an ACK message even though an EOD message was transmitted.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
45H	Command ID
F7H	End of exclusive

Communications error : ERR (4EH)

This message warns the remote device of a communication fault encountered during message transmission due, for example, to a checksum error. An ERR message may be replaced with a "Rejection (RJC)" one, which terminates the current message transaction in midstream.

When it receives an ERR message, the sending device may either attempt to send out the last message a second time or terminate communication by sending out an RJC message.

Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Model ID
4EH	Command ID
F7H	End of exclusive

Rejection : RJC (4FH)

This message is sent out when there is a need to terminate communication by overriding the current message. An RJC message will be triggered when :

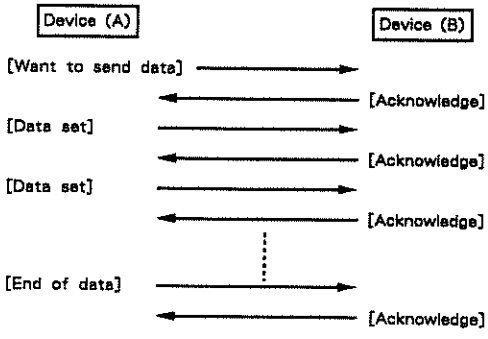
- a WSD or RQD message has specified an illegal data address or size.
- the device is not ready for communication.
- an illegal number of addresses or data has been detected.
- data transfer has been terminated by an operator.
- a communications error has occurred.

An ERR message may be sent out by a device on either side of the interface. Communication must be terminated immediately when either side triggers an ERR message.

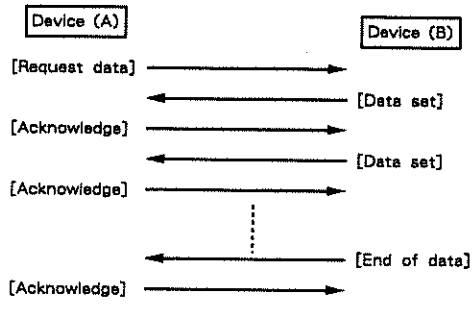
Byte	Description
F0H	Exclusive status
41H	Manufacturer ID (Roland)
DEV	Device ID
MDL	Modal ID
4FH	Command ID
F7H	End of exclusive

Example of Message Transactions

●Data transfer from device (A) to device (B).

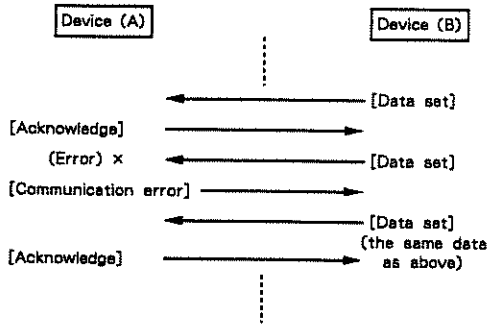


●Device (A) requests and receives data from device (B).

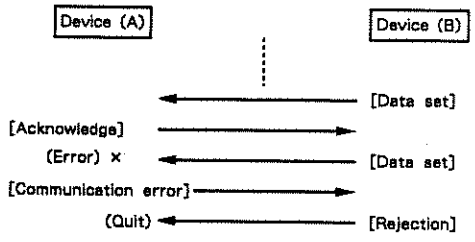


●Error occurs while device (A) is receiving data from device (B).

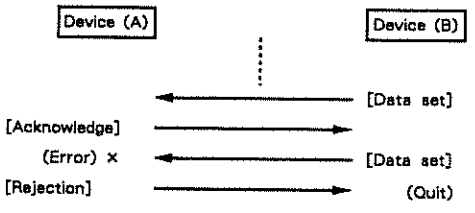
1) Data transfer from device (A) to device (B).



2) Device (B) rejects the data re – transmitied, and quits data transfer.



3) Device (A) immediately quits data transfer.



RS – PCM KEYBOARD
Model U – 20

MIDI Implementation

Date : Sep. 20. 1989
Version : 1.02

1. TRANSMITTED DATA

Active sensing is always transmitted on condition that Setup/MIDI/Kybd/Tx Active Sensing is "On", and other messages are transmitted in only Keyboard mode, Sound mode or Link mode.

■ Note event

● Note off

Status	Second	Third
8nH	kkH	vvH

kk = Note number 0H – 7FH (0 – 127)
vv = Velocity 1H – 7FH (1 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is transmitted through 'kybd/MIDI/Tx Ch'.
The message is transmitted through 'Setup/MIDI/kybd/Tx Setup Ch' when 'Kybd/MIDI/Tx Ch'is set as 'Set'.

In arpeggio play mode, note messages of arpeggio play are transmitted through 'Kybd /MIDI/Arp Ch'.

The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Arp Ch' is set as 'Tx'.

The message is not transmitted when 'Kybd/MIDI/Arp Ch' is set as 'Off'.

'Kybd/MIDI/Arp Ch' priors to 'Kybd/MIDI/Tx Ch' when they are set as same channel.

● Note on

Status	Second	Third
9nH	kkH	vvH

kk = Note number 0H – 7FH (0 – 127)
vv = Velocity 1H – 7FH (1 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is transmitted through 'Kybd/MIDI/Tx Ch'.
The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Tx Ch' is set as 'Set'.

In arpeggio play mode, note messages of arpeggio play are transmitted through 'Kybd /MIDI/Arp Ch'.
The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Arp Ch' is set as 'Tx'.

The message is not transmitted when 'Kybd/MIDI/Arp Ch' is set as 'Off'.

'Kybd/MIDI/Arp Ch' priors to 'Kybd/MIDI/Tx Ch' when they are set as same channel.

The detected velocity is converted into the transmitted velocity (vvH) which is within the range specified in Kybd/Perform/Velo/Velocity Range.

■ Control change

● Modulation depth

Status	Second	Third
BnH	01H	vvH

vv = Modulation depth 00H – 7Fh (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

● Hold

Status	Second	Third
BnH	40H	vvH

vv = 00H (0) : Off
vv = 7FH (127) : On
n = MIDI channel No. 0H – FH (1 – 16)

● Ext control, C1, C2

Status	Second	Third
BnH	ccH	vvH

ccH = control number : 0H – 5H (0 – 5), 7H – 1FH (7 – 31), 40H – 5FH (64 – 95)
vvH = control value : 0H – 7FH (0 – 127)
n = MIDI channel No. : 0H – FH (1 – 16)

Control number can be assigned to Ext control, C1 and C2.

The message is not transmitted when 'Setup/MIDI/Kybd/Tx Control Change is set as 'Off'.
The message is transmitted through 'Kybd/MIDI/Tx Ch'.
The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Tx Ch' is set as 'Set'.

■ Program change

Status	Second
CnH	ppH

pp = Program number 00H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

Transmits through 'Kybd/MIDI/Tx Ctrl Ch' when change keyboard patch on the panel.
Program change message is transmitted when [Part►] button is pressed in edit page of program change number.
The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Tx Ctrl Ch' is set as 'Set'.
The message is transmitted through 'Kybd/MIDI/Tx Ch' when 'Kybd/MIDI/Tx Ctrl Ch' is set as 'Tx'.

Transmitted program number is specified in Kybd/MIDI/Tx Pgm #.
Transmits keyboard patch number when 'Kybd/MIDI/Tx Pgm #' is set as 'P.N'.

But, the message is not transmitted when 'Setup/MIDI/kybd/Tx Program Change' is set as 'Off' or 'Kybd/MIDI/Pgm #' is set as 'Off'.

■ Channel aftertouch

Status	Second
DnH	vvH

vv = 0 – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is transmitted through 'Kybd/MIDI/Tx Ch'.
The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Tx Ch' is set as 'Set'.
The message is not transmitted when 'Kybd/MIDI/Tx Ch Aftertouch' is set as 'Off'.

■ Pitch bender change

Status	Second	Third
EnH	llH	mmH

ll = Lower pitch bender value 00H – 7FH (0 – 127)
mm = Upper pitch bender value 00H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is transmitted through 'Kybd/MIDI/Tx Ch'.
The message is transmitted through 'Setup/MIDI/Kybd/Tx Setup Ch' when 'Kybd /MIDI/Tx Ch' is set as 'Set'.

■ Exclusive

Status
F0H : System exclusive
F7H : EOX (End of Exclusive)

A set of various parameter is transmitted, and received using MIDI Exclusive messages

Refer to section 3 and 'Roland Exclusive Messages' for details.

■ Active sensing

Status
FEH

Transmitted for checking MIDI connection between U – 20 and external equipment.

This message is always transmitted on condition that 'Setup/MIDI/Kybd/Tx Active Sensing' is set as 'On'.

2. RECOGNIZED RECEIVE DATA

This message is always recognized except for ROM play.

■ Note event

● Note off

Status	Second	Third
8nH	kkH	vvH
9nH	kkH	00H

kk = Note number 0H – 7FH (0 – 127)
vv = Velocity ignored
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.
The message is recognized through 'Sound/Part/MIDI/Key Range'.

● Note on

Status	Second	Third
9nH	kkH	vvH

kk = Note number 0H – 7FH (0 – 127)
vv = Velocity 1H – 7FH (1 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.
Note number is recognized through 'Sound/Part/MIDI/Key Range'.
Note velocity is recognized through 'Sound/Part/MIDI/Velo Range'.

■ Polyphonic aftertouch

Status	Second	Third
AnH	kkH	vvH

kk = Note number 0H – 7FH (0 – 127)
vv = 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', Sound/R.Part/Rx Ch'.

■ Control change

● Modulation depth

Status	Second	Third
BnH	01H	vvH

vv = 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.

● Volume

Status	Second	Third
BnH	07H	vvH

vv = 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.

The value (vvH) corresponds to 'Sound/Part/Output/Level'.

● Pan

Status	Second	Third
BnH	0AH	vvH

vv = 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch'.
The message is through 'Sound/Part/Output/Pan', but range are changed from 7 to <7.

● Hold

Status	Second	Third
BnH	40H	vvH

vv = 0H – 3FH (0 – 63) : Off
vv = 40H – 7FH (64 – 127) : On
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/R Ch'.

● Sound control parameter 1

Status	Second	Third
BnH	ccH	vvH

ccH = 0H – 5H (0 – 5), 7H – 1FH (7 – 31), 40H – 5FH (64 – 95)
vvH = 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Setup/MIDI/Sound/Rx Control Ch', 'Sound/Part/MIDI/Rx Ch' and 'Sound/R.Part/Rx Ch'.

Change the number through 'Sound/Ctrl/Prm1,2,3 #'.

● RPN LSB

Status	Second	Third
BnH	64H	vvH

vv = LSB of the parameter number controlled by RPN
n = MIDI channel No. 0H – FH (1 – 16)

● RPN MSB

Status	Second	Third
BnH	65H	vvH

vv = MSB of the parameter number controlled by RPN
n = MIDI channel No. 0H – FH (1 – 16)

Using MIDI RPN, parameters can be changed by Control change messages.
RPN MSB and LSB specify the parameter to be controlled, while Data entry show the parameter value.

Master fine tune and Bender range are controllable by RPN on U – 20.

RPN MSB	RPN LSB	Data entry	Comments
00H	00H	vvH	Bender range vv= MSB LSB 00 ignore 0 cent : 0C ignore 1200 cent 0D ignore

The message is recognize through 'Sound/Part/Rx Ch', 'Sound/R.Part/Rx Ch'.

MSB	LSB		
00H	01H	vvH	Master fine tune vv= MSB LSB 20 00 -50 cent : 40 00 0 cent : 60 00 +50 cent

The message is recognized through 'Setup/MIDI/Sound/Rx Control Ch'.

● Reset all controllers

Status	Second	Third
BnH	79H	00H

n = MIDI channel No. 0H – FH (1 – 16)

When Reset all controllers is recognized, each of the controllers is set as follows.

Modulation	0 (min)
Hold1	0 (off)
Pitch bender	+/– 0 (center)
Channel Aftertouch	0 (min)
Polyphonic Aftertouch	0 (min)

The message is recognize through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.

■ Program change

● Patch/Timbre change

Status	Second
CnH	ppH

pp = Program change number 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

Case of Patch change
pp = 0H – 3FH (0 – 63) ...Patch # I11 – I88
pp = 40H – 7FH (64 – 127)...Patch # C11 – C88
(The message will be ignored if no RAM CARD is inserted.)

Case Timbre change
pp = 0H – 7FH (0 – 127) ...Timbre # A11 – B88
(The Timbre is selected from the same media (Internal or RAM CARD) as Sound patch.)

The Timber change is recognized through 'Sound/Part/MIDI/Rx Ch'.
The Timbre change is not recognized through 'Setup/MIDI/Sound/Rx Timbre Change' is set as 'Off'.

The Patch change is recognized through 'Setup/MIDI/Sound/Rx Control Ch'.
The Patch change is not recognized through 'Setup/MIDI/Sound/Rx Control Ch' is set as 'Off'.
The Program change is not recognized Edit mode or ROM play mode.

■ Channel aftertouch

Status	Second
DnH	vvH

vv = 0H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.

■ Pitch bender

Status	Second	Third
EnH	llH	mmH

ll = Lower Pitch bender value 00H – 7FH (0 – 127)
mm = Upper Pitch bender value 00H – 7FH (0 – 127)
n = MIDI channel No. 0H – FH (1 – 16)

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.

■ Modes

● Local control

Status	Second	Third
BnH	7AH	vvH

vv = 00H – 3FH (0 – 63) : Off
vv = 40H – 7FH (64 – 127) : On

The message is recognized through 'Setup/MIDI/Kybd/Rx Control Ch'.
The message is ignored through 'Setup/MIDI/Kybd/Rx Control Ch' is set as 'Off'.

● All notes off

Status	Second	Third
BnH	7BH	00H

n = MIDI channel No. 0H – FH (1 – 16)

When All notes off is recognized, all the notes which have been turned on by MIDI Note on message are turned off.

The message is recognized through 'Sound/Part/MIDI/Rx Ch', 'Sound/R.Part/Rx Ch'.

● Omni off

Status	Second	Third
BnH	7CH	00H

n = MIDI channel No. 0H – FH (1 – 16)

Recognized as All notes off only.
The U – 20 stays in Mode 3 (Omni off, Poly).

● Omni on

Status	Second	Third
BnH	7DH	00H

n = MIDI channel No.0H – FH (1 – 16)

Recognized as All notes off only.
The U – 20 stays in Mode 3 (Omni off, Poly).

● Mono

Status	Second	Third
BnH	7EH	mmH

mm = Mono channel range ignore
n = MIDI channel No. 0H – FH (1 – 16)

Recognized as All notes off only.
The U – 20 stays in Mode 3 (Omni off, Poly).

● Poly

Status	Second	Third
BnH	7FH	00

n = MIDI channel No. 0H – FH (1 – 16)

Recognized as All notes off only.
The U – 20 stays in Mode 3 (Omni off, Poly).

■ Exclusive

Status
F0H : system exclusive
F7H : EOX (End of Exclusive)

A set of various parameter is transmitted, and received using MIDI Exclusive messages. Refer to section 3 and 'Roland Exclusive Messages' for details.

The message is not recognized through 'Setup/MIDI/Common/Rx SysEx' is set as 'Off'.
Recognized through 'Setup/MIDI/Common/Device ID'.

■ Active sensing

Status
FEH

Once receiving this message, the U – 20 expects to accept status or data in sequence, at last within 300 msec intervals.
If the unit fails to receive a message 300 msec after previous one, it judges there is a problem somewhere in MIDI path, muting the current sound and setting each of controllers as below, then stopping 300 msec – interval monitoring of incoming signal.

3. EXCLUSIVE COMMUNICATIONS

U－20's exclusive map is roughly divided into two area, Bulk－dump area and Individual parameter area.
Bulk－dump area is suited for dumping a set of parameters owing to its hi－speedness, while Individual parameter area is suited for controlling each parameter.

■ Device ID

The message is transmitted or received through 'Setup/MIDI/Common/Device ID'.

■ Model ID

Model－ID# in the exclusive message : 2BH

■ Bulk dump

When U－20 is transmitter, Panel operation or MIDI Exclusive data request1.

U－20's bulk－dump follows the rules shown below.

1. One byte data read from U－20's internal memory is transfared after it is divided into two (upper 4 bits and lower 4 bits).
   For example, 0ABh will be divided into 0Bh and 0Ah (lower first).
2. In the case of sending 1 packet of exclusive message, 64 bytes of internal data will be transfared in 128 bytes.
   However, the last 1 packet to be sent may get fractional according to the amount of data to be read from internal memory.

Therefore, contents of bulk－dump can easily be known from the structure of internal memory's data.

[Table1] － [Table12] are maps of internal memory, not maps of MIDI.
Transformation must be considered for address and data.
The first address to be read for Bulk－dump is noted 0.
If certain bits of 1 byte data have meanings individually, their bit numbers are also noted.
Bits that are not specified are to be recognized as " －" (reserved).
Basical value for data noted as "reserved" is 0.

As for values and display, refer to the explanation of individual parameter area. Explanation is common between the two.
However, some of the Set up parameters cannot be controlled individually. Those kinds are explained here.

■ Transmit

Exclusive messages are transmitted under following conditions.

1) Patch dump
When switching keyboard patch in play mode, all of temporaly keyboard patch and temporary chord 1, 2 is transmitted as bulk－dump.

When switching keyboard patch in play mode, all of temporary sound patch patch, temporary timbre and temporary rhythm setup is transmitted as bulk－dump.

When switching keyboard patch in rink mode, all of noted above is transmitted as bulk－dump.

2) Edit parameter dump
Value of parameter currently being edited can be transmitted by pressing [ENTER]. However, parameters that are not supported by exclusive message will not be transmitted.

3) Bulk dump mode

Transmit as follows.

Data/Bulk/Temp : All, Keyboard Patch, Chord1, Chord2, Sound Patch, Timbre [1]... [6], Timbre All, Rhythm Setup

Data/Bulk/Int : All, Setup, Keyboard Patch, Chord, Sound Patch, Timbre, Rhythm Setup

Data/Bulk/Card : RAM Card All

4) Recognize RQ1
When receiving RQ1 (refer to Roland exclusive format), parameter corresponding to the address is transmitted.
RQ1 for certain parameters is ignored.
U-20 can not send discontinuous blocks by one RQ1.

■ Recognized receive data

This message is always recognized except for ROM play.

■ Parameter address map

address DT1 RQ1 (*...available)

Notes

* Can be set to ○ or × manually. and memorized.

** Can be set to ○ or × manually.

*** RPN = Registered Parameter Number.

RPN # 0 : Pitch Bend Sensitivity

RPN # 1 : Master Tune

Mode 1 : OMNI ON, POLY

Mode 2 : OMNI ON, MONO

Mode 3 : OMNI OFF, POLY

Mode 4 : OMNI OFF, MONO

○ : Yes

× : No

■How to read a MIDI Implementation Chart

○ : MIDI data that can be transmitted or received
× : MIDI data that cannot be transmitted or received
＊ : Transmission or reception can be turned on or off. The setting is remembered even when the power is turned off.

● Basic Channel
The MIDI channel for transmitting (receiving) MIDI data can be specified over this range. The MIDI channel setting is remembered even when the power is turned off.

● Mode
Most recent synthesizers use mode 3 (omni off, poly).
Reception : Data is received only on the specified channels , and played polyphonically.
Transmission : All musical data is transmitted on the specified MIDI channel.

＊ "Mode" refers to MIDI Mode messages.

● Note Number
This is the range of note numbers that can be transmitted (received. Note number 60 is middle C (C4)).

● Velocity
This is the range over which velocity can be transmitted (received) by Note On and Note Off messages.

● Aftertouch
Key's : polyphonic aftertouch
Ch's : channel aftertouch

● Pitch Bender
The bender range setting of each Timbre determines the range of pitch change caused by pitch bender data. When set to 0, pitch bender data will be ignored.

● Control Change
This indicates the control numbers that can be transmitted (received), and what they will control. For details, refer to the MIDI implementation.

● Program Change
The program change numbers in the chart indicate the actual data. (This is one less than the Pitch and Timbre program numbers.)

● Exclusive
Exclusive message reception can be turned on/off by the exclusive switch (setup).

● Common, Realtime
These MIDI messages are used to synchronize sequencers and rhythm machines. The U-20 does not use these messages.

● Other
These messages are mainly used to keep a MIDI system running correctly. Active sensing transmission can be turned on/off.

Main Specifications

U-20 : RS-PCM keyboard

●Keyboard
61 keys (with velocity and channel aftertouch)

●Sound Generator
RS-PCM Sound Generation
Maximum Voices : 30 voices

●Internal Memory

Setup :	1
Keyboard Patches :	64
Chord Sets :	8
Sound Patches :	64
Timbres :	128
Rhythm Sets (64 keys : B1—D7):	4
Internal Tones :	128

●RAM Card (M-256E)

Setup :	1
Keyboard Patches :	64
Chord Sets :	8
Sound Patches :	64
Timbres :	128
Rhythm Sets (64 keys : B1—D7):	4

●Display
2 line 24 character (with backlight)

●Dimensions
985 (W) × 310 (D) × 85 (H) mm
38-3/4″ × 12-1/6″ × 3-1/4″

●Weight
10 kg/22 lbs

●Power Consumption
20 W

●Accessories
Owners Manual
Sound Patch Chart
Guarantee
Connection Cable (PJ-1M)

●Options

RAM Card (Memory Card)	M-256E
PCM Card (Sound Library)	SN-U110 series
Stereo Headphones	RH-100
Foot Switch	DP-2, DP-6
Expression Pedal	EV-5, EV-10
MIDI/SYNC Cable	MSC-07, 15, 25, 50, 100
Semi-hard Case	SHC-2
Carrying Bag	CB-10
Keyboard Stand	KS-8

Apparatus containing Lithium batteries

ADVARSEL!

Lithiumbatteri – Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

VARNING!

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt fabrikantens instruktion.

ADVARSEL!

Lithiumbatteri – Eksplosjonsfare.
Ved utskifting benyttes kun batteri som anbefalt av apparatfabrikanten.
Brukt batteri returneres apparatleverandøren.

VAROITUS!

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevaimistajan suosittelemaan tyyppiin. Hävitä käytetty paristo valmistajan ohjelden mukaisesti.

For the USA

FEDERAL COMMUNICATIONS COMMISSION RADIO FREQUENCY INTERFERENCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Unauthorized changes or modification to this system can void the users authority to operate this equipment.
This equipment requires shielded interface cables in order to meet FCC class B Limit.

For Canada

CLASS B **NOTICE**

This digital apparatus does not exceed the Class B limits for radio noise emissions set out in the Radio Interference Regulations of the Canadian Department of Communications.

CLASSE B **AVIS**

Cet appareil numérique ne dépasse pas les limites de la classe B au niveau des émissions de brults radioélectriques fixés dans le Réglement des signaux parasites par le ministère canadien des Communications.
