COMPAQ

BLACKBERRY®
WIRELESS EMAIL SOLUTION

Compaq *iPAQ* BlackBerry Wireless Email Solution

Get everything you need to get started
The package includes the *iPAQ* BlackBerry and everything you need to set your users free:

> BlackBerry Enterprise Server Software for Microsoft Exchange

> Compaq *ProLiant™* server

> Installation and Startup Services

The *iPAQ* BlackBerry Solution is the "Always On, Always Connected®" wireless e-mail solution from Compaq, the leader in enterprise messaging solutions.

Get the mobile advantage

With the BlackBerry Enterprise Server (BES) software, you can deliver the benefits of wireless e-mail to mobile users across your organization. The BES is a Windows 2000 service that monitors the mailboxes of all BlackBerry users in your organization. Each time a new message arrives in a user's mailbox, the BES passes an encrypted copy of the message to the user's handheld *iPAQ* BlackBerry.

The BlackBerry Enterprise Server addresses crucial corporate requirements regarding remote e-mail access:

> **Centralized administration of users and servers** — The BlackBerry Enterprise Server's user and server administrative tools fully integrate with Microsoft Exchange Administrator.

> **Scalability and reliability** — A single BlackBerry Enterprise Server can support hundreds of BlackBerry users in your organization.

> **Performance and monitoring** — The BlackBerry Enterprise Server Alert provides constant monitoring and notification of BlackBerry Enterprise Server performance.

> **Security** — BlackBerry software uses Triple DES encryption. E-mail messages remain encrypted and confidential at all points between the user's mailbox and *iPAQ* BlackBerry.

Get organized
The *iPAQ* BlackBerry is a full-featured organizer — complete with calendar, address book and task list — that automatically synchronizes with the user's desktop Personal Information Management software when placed in its docking cradle. The *iPAQ* BlackBerry includes integrated wireless e-mail, calendar, organizer software and PC docking cradle. Creating and retrieving information is amazingly simple using the optimized keyboard, thumb-operated trackwheel, easy-to-read backlit screen and intuitive menu-driven interface.

Get nationwide coverage and flat-rate pricing
BlackBerry operates over Mobitex networks in the United States and Canada. These networks offer broad coverage, nationwide roaming, fast messaging and reliable delivery — all for the monthly flat-rate price of $39.99. (U.S. only. Optional services include paging and Canadian roaming).

Get the expert support you need, nationwide
Not an expert in wireless messaging? Don't worry. Compaq makes it easy to get you up and running — regardless of the size of your organization. Our BlackBerry Compaq Installation and Startup Service includes:

> Preparation of the BlackBerry Enterprise Server on the *ProLiant* server

> Installation and startup of the BlackBerry Enterprise Server Service for up to 500 users

> Brief orientation for the system administrator with pointers to applicable support
